# >>>BREAKING UPDATE<<<

## Monster Oil Boom Emerging in Southern California!

**Investors poised for enormous profits as USGS confirms  
huge oil formation up to 4 times bigger than Bakken!**

**Tobin Smith**  
Fox  
News Market  
Analyst

Fellow Investor:

This is big and I want to alert you now, before it makes national news.

Southern California is heating up as the

This breaking story is shaping up to become a huge money-maker for early investors. You can be one of them, if you act swiftly!

In the midst of a swelling oil boom in southern California, one unknown oil company is poised to become a top performer in the region.

***The real deal...from a seasoned team of oilfield pros!***

This should be the second time this team, headed by oil veteran Bob Rosenthal (more about Bob in a moment) knock it out of the park for shareholders!

Two years ago, Bob and his team steered their first oil company to a massive buyout by energy giant Hess Oil (NYSE: HES).

Shareholders lucky enough to get in on this early were paid \$10 a share for a whopping 1,000% gain off entry-level prices of \$1.00.

*Had you been in on their prior deal, \$10,000 would have*

**The company is North American Oil & Gas (**NAMG**) and it could be so undervalued at the moment I'm forecasting at least ten-fold gains off its current share price!**

hottest new shale oil play in the US.

Reports indicate this area could hold four-times the resources of America's Bakken shale alone!

Clearly, there's huge profit opportunity for investors who get in early.

If you were in on their prior deal, \$10,000 would have paid you \$100,000! \$25,000 would have soared to \$250,000!

**Are you ready to make money like this?**

**Round two: New game, same players.**

This team is ready to do it again, this time with NAMG and this time it could be two to three times bigger than before!

**Very real and very urgent...in a very limited window of opportunity!**

## Sold to **HESS**: for **\$630 million in CASH!**

**NAMG** is backed by the same team that took American Oil & Gas to a \$630 million buyout and earned early shareholders as much as ten-fold gains on their initial investments!

**NAMG** is Round Two for this team and this time, the gains could be even more dramatic! NAMG is a buy now to lock in this enormous profit potential!

**NAMG...just getting started at around \$1.00!**

**NAMG starting now at around \$1.00!**

**American Oil & Gas started out at \$1.00 per share**

**California is heating up as the hottest new oil play in America!**

Just last year, the United States Geological Survey (USGS) confirmed that California could hold up to 4-

times more oil than the Bakken in North Dakota and Wyoming.

Shareholders made fortunes from early investments in off-radar Bakken oil companies similar to NAMG. In fact, later in this report, I'll cite eleven examples of companies that achieved an overall average gain of 1,150% for

### Monterey and Santos shale oil

The nation's largest shale oil play, or extension of existing production activity is actually a combination of two shale formations: the Lower Monterey and the Santos. Together they are estimated to contain more than three times as much recoverable oil as the second-largest shale formation in the United States, the Bakken which

**Technically recoverable reserves:** 15.4 billion barrels, which is 78 times California's total 2011 oil production, enough to supply the state for about 21 years at the current rate of oil refining.

Source: U.S. Energy Information Administration, California Division of Oil, Gas and Geothermal Resources

early shareholders!

Right now I want to focus clearly on the opportunity available to you right now.

This scene is repeating itself right now in southern California!

underlies much of North Dakota and Montana. Last year activity in the Monterey/Santos was estimated to cover 1,752 square miles in the San Joaquin and Los Angeles basins.

Shale production areas

What's more...few outside the oil business know about it! The California oil boom has not yet made national news (if it had, I'd have been among the first to report on it). When it does, the chance for you to pocket the mega-gains I see coming will disappear...you'll be watching from the sidelines as others grow rich.

>>>*Buy this stock up to \$3.00 per share...with a \$5.00 price target<<<*

Let me be very clear about this...

This is a monster opportunity to make some very significant profits from a known, oil-rich basin already packed with big-league producers like Occidental Petroleum (OXY: \$72.1 billion), which has secretly been loading up on oil leases in this area for months now!

**This story is about to break wide open and you could make a fortune from it!**

## Secret Land Grab Exposed in Southern California

*Oil boom brewing throughout San Joaquin Basin!*

### Monster Oil Boom Emerging in Southern California!

A pair of seasoned oilfield entrepreneurs grabbed a stunning 12.5 square mile stake in San Joaquin, positioning company shareholders for a huge payday!

**NAMG** is an immediate BUY!

Bob Rosenthal and his investors made fortunes for shareholders when their prior company (much like **NAMG**) was sold to Hess for \$630 million in cash!

They're now preparing to do it again!

**Four-times bigger than the Bakken!\***  
**Insiders have fought desperately to keep it secret but...**

**Up to four-times more oil than the Bakken and ten times your money**

**Southern California is today's "go-to"**

\*USGS recently confirmed enormous shale fields in San Joaquin Valley, Southern California.

## Send your money

Get ready to send the Ventura County News a "Thank You" note for alerting the public...but only after you contact your broker and grab every share of North American Oil & Gas (**NAMG**) that you can get your hands on!

- **North American Oil & Gas (NAMG) set stakes on 8,000 gross acres of their own oil leases.**
- **At today's \$1.00 entry, NAMG could soar to \$5.00 this year!**
- **The time to move on NAMG is right now.**
- **I see a stampede of investors pouring into the area, just like they did for early players in the Bakken and Eagle Ford!**

### To My Fellow Investor:

This report is about three major events:

1. A secret land grab in southern California by energy giant Occidental Petroleum...
2. A savvy pair of oil entrepreneurs who have a solid track record of making shareholders a lot of money, and
3. An off-radar company that grabbed almost as much acreage as Occidental and could be a ten-bagger++ now that you know what's going on.

I'll start with this. *I'm recommending an immediate and aggressive buy in North American Oil & Gas (**NAMG**).*

*I'm suggesting urgency because the situation in southern California is heating up so fast that an inrush of investors could quickly send **NAMG** soaring as high as \$5 a share this year.*

*If you're interested in grabbing a chunk of the profits I see taking shape, I recommend you move on this now.*

**For the moment, you can load up on **NAMG** at around \$1.00. Don't bet the farm, but definitely get some money in play. **NAMG** is a fast-track opportunity with huge upside potential.**

Beyond the 500% gains I can see coming this year, **NAMG** could fly past 1,000% gains in the long term. I'll explain how in a moment.

First let me assure you, this opportunity will be short-lived. So I urge you to stop what you're doing and dig into this right now.

Occidental Petroleum was recently exposed as secretly scooping up San Joaquin oil leases using an unknown front company called "Vintage Petroleum".

By the time the story broke, their front company had quietly locked in 9,000 acres of San Joaquin oil leases!

Few if any in the area knew of Occidental's plan. One local attorney representing landowners was quoted saying, "Something big must be

## region for oil stock profits!

As reported by CNBC, 30 May 2013

"California [is] home to one of the best-kept secrets of the U.S. fossil fuel renaissance—the Monterey shale, a formation that houses the country's largest supply of proven reserves.

"The word "prolific" is often used to describe Monterey's shale bounty, which according to Energy Information Agency estimates holds at least three times the reserves contained within the Bakken and Eagle Ford formations—currently two of the hottest regions in the U.S. shale boom."

"As a company-building oilman, none are better than Bob Rosenthal, president of North American Oil & Gas. After selling his last company to Hess Oil **HESS** (NYSE: HES) and handing initial shareholders a ten-fold gain...Bob and his investors have reeled in another great oil project in San Joaquin Basin."

**Don't wait for this to hit national news! This is an Immediate Buy Situation!**

Company Name:  
North American  
Oil & Gas

Stock Symbol: **NAMG**

Situation: Significant position in booming San Joaquin basin

Buy to Price: Up to \$3.00/share

Near Target: \$5.00

Long Term: \$10.00 and up

Strategy: Buy and hold, watch

# OXY'S SECRET EXPOSED!

**ABOVE AND TOP:** Vintage Petroleum has been aggressively pursuing leases from Ventura County landowners, including Limoneira in Santa Paula. According to documents filed with the Ventura County recorder's office, Vintage Petroleum has entered into 192 lease agreements during the past six months in deals involving at least 9,000 acres.

## To stay ahead of oil boom, company makes deals for 9,000 acres

Ventura County Star broke the story that OXY was scooping up local oil leases under a cover company name, "Vintage Petroleum."

Big indeed!

Oil insiders have been quietly targeting a Southern shale oil deposit calculated as being up to four-times larger than America's Bakken shale.

Bob Rosenthal and his investors, were among the first in, and they've locked in a huge piece of this.

The good news is, Bob doesn't come from a mega oil giant...he's the CEO of a small off-radar start-up, North American Oil & Gas (**NAMG**).

**NAMG** is the kind of company that over time can deliver 10-fold to 20-fold gains, but only if you beat others in!

When you catch one like this early....you need to move on it aggressively, which is why I'm urging you to act swiftly.

**NAMG** is a no-brainer around a \$1.00. And even if you come in a bit late, I wouldn't hesitate to pull the trigger at \$2.00.

Here's why: Bob is not a guy who got lucky.

He's done this before.

In less than 48 months, Bob and his investors took their previous company, American Oil & Gas, to a \$630 million buyout that netted ground-floor shareholders over a 1,000% return on their initial investment!

## Now, they're after it again, and this time it could be even bigger!

As you may know, my position as a national newscaster has put me in touch with people who make big things happen.

Many of these guys are telling me right now that Southern California is the place to be...and in my experience, it may only take a few weeks for this to make national financial news.

So now that you're in front of the information curve, here's how you could rack up some serious, fast profits with that information.

*Ventura County Star* reports that OXY secretly leased 9,000 acres in southern California shale leases.

North American Oil & Gas reeled in 8,000 acres!

And like what happened so often in the Bakken, small companies like **NAMG** that got a foothold made their early shareholders rich!

Stealth moves by big oil kept San Joaquin lease activity top secret.

As a veteran analyst in the oil and gas industry, I've been seeing a lot of new lease activity targeting San Joaquin oil shale. It has been clear that something big is about to go down!

The more I looked, the bigger it got.

## Shale plays have produced fortunes!

Look at the historical record from the Bakken oil run of 2009. (Details later in this report.) Ground floor investors made instant millions from the many small companies that gained a foothold in the area.

The Bakken run was no fluke. The same millionaire-producing results cropped up in Eagle Ford Texas shale oil deposits that experienced its run shortly after the Bakken.

The clock is ticking on this one. The San Joaquin story could make big news at any time. **NAMG** could be a stunning win.

Turns out that top-producing oil companies are pumping billions of dollars into San Joaquin and it's not for the conventional oil (which still produces in abundance)...*it's for the long-overlooked oil shale that lies deeper in the ground!*

Oilfield veterans have long known that the shale oil was down there, it simply took drilling and production experience from the Bakken and Eagle Ford shale to make extraction possible.

# TOP SECRET

Stealth moves by big oil kept San Joaquin lease activity top secret.

Recently published news from an explosive report by the Ventura County Star reveals that Occidental Petroleum used a virtually unknown front company, to accumulate 9,000 acres of new oil leases in the San Joaquin Basin.

*"Documents filed with the Ventura County recorder's office show that Vintage Petroleum, a subsidiary of Occidental Petroleum, has entered into 192 lease agreements during the past six months in deals involving at least 9,000 acres."*

*""They're making a big play," said attorney Stuart Nielson, whose law firm in Oxnard has represented several of the [landowners]."* —Ventura County Star

The secrecy is breaking down. As it does, the rush to an off-radar profit opportunity like **NAMG** could quickly propel shares to \$5.00 or better.

Their company, North American Oil & Gas (**NAMG**), backed by serious financing, has made impressive strides in building company lease assets.

To date, North American Oil & Gas has accumulated 8,000 gross acres in the area, just a thousand acres shy of the Occidental Petroleum (OXY) acquisitions reported by the *Ventura County Star*.

**>>>Buy this stock up to \$3.00 per share...with a \$5.00 price target<<<**

Though I expect they'll be adding to that at every opportunity, don't wait for any new acquisitions, the time to get in on **NAMG** is right now.

**Bob Rosenthal and his investors have a solid history of making early shareholders rich!**

Should **NAMG** become the home run I'm predicting, it won't be the first time that Bob has hit one out of the park for shareholders.

MAKE BIG NEWS AT ANY TIME. **NAMG** COULD BE A STUNNING WIN IF YOU GET IN NOW.

Now they're going after it with new recovery technology that can break this region wide open.

The entire San Joaquin Basin is poised for a stampede of new investors clamoring for a shot of the profits they see coming.

Small, off-radar oil companies made fortunes for shareholders in Bakken and Eagle Ford. (I'll cite a dozen of them later in this report where the average shareholder gains topped 1,330%!)

I can tell you this, the Star story has cracked the door...this can get big really fast!

If the Wall Street Journal had reported this story, it would be game over, too late to get in. Were that the case, I wouldn't even bother writing this report.

*But it's not...and that sets up a very limited opportunity to move in and make some serious money off this rapidly developing situation.*

**NAMG holds an historically validated ten-fold profit potential and here's why I feel highly confident in making that projection:**

Coincidental with all these developments, I know an experienced team of oil patch veterans, Bob Rosenthal and his investors, who have also locked in San Joaquin leases.

A few years back, they co-founded American Oil & Gas, a very similar OTCBB stock that caught the eye of a few lucky investors who loaded up early at around \$1.00 a share. It graduated to the NYSE AMEX and...

In just 48 months, energy giant, Hess Corp.  (NYSE: HES \$22.7B) bought out the entire company for \$630 million in cash! Shareholders received \$10 per share from Hess...about ten-times their entry cost of \$1.00.

That was no isolated win. History has a way of repeating itself.

Rosenthal has deep roots in another oil venture, Alaskan-based Great Bear Petroleum. Great Bear is now emerging as one of America's largest domestic shale oil producers. On its current growth track, Great Bear is on target to become a \$1 billion company by the end of the decade.

### **Well positioned...Well Managed...Well funded...**

A guy like Bob Rosenthal on an oil prospect as enormous as San Joaquin tells me one thing:

*There's a ton of money to be made by getting into NAMG right now!*

In comparing NAMG to his earlier company, American Oil & Gas, the similarities are striking. NAMG clearly holds the same ten-bagger potential that made American Oil & Gas shareholders enormous gains.

### **"More untapped oil in California's San Joaquin Basin than America's Bakken Shale!"**

At the end of 2010, California ranked (excluding offshore) #3 in the US in both oil production and proven oil reserves and is home to many of the nation's largest oil fields, three of which are in the top 10.

## **California's San Joaquin Basin is emerging as an oil and gas mega-field!**

Oil companies are targeting the San Joaquin Basin due to the emergence of unconventional hydrocarbon plays in this prolific basin.

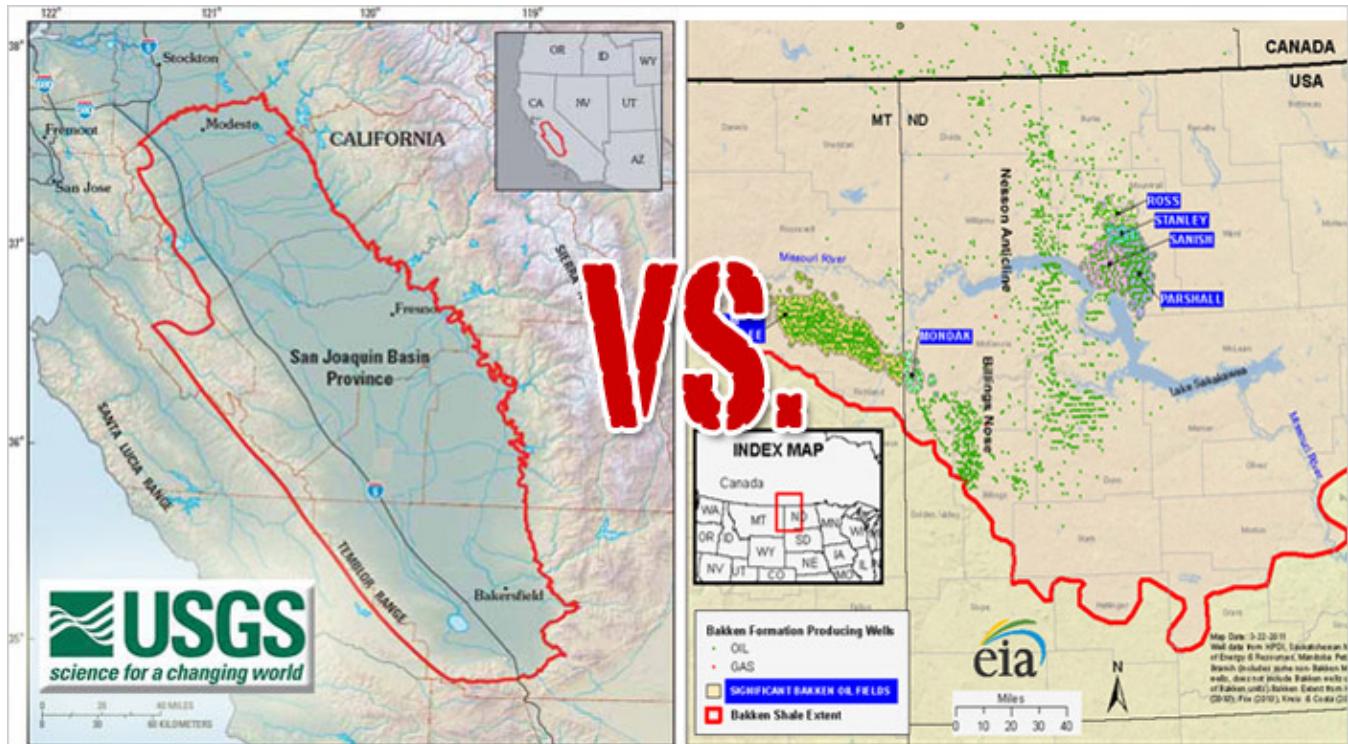

In 2009, Occidental Petroleum made an estimated 250 million-barrel oil discovery in the San Joaquin Basin, the largest discovery in California in 35 years!. No wonder they've been loading up on acreage! What's more, significant conventional oil and gas reserves continue to be discovered.

Current thinking is that the San Joaquin Basin will soon surpass both the Bakken and Eagle Ford in total reserves, propelling California into position of being America's top producer of oil and gas.

Recent reports from the U.S. Geological Survey (USGS) and Energy Information Agency (EIA):

*The oil shale deposits in San Joaquin Basin have been ignored for decades as too difficult to tap. Enhanced oil recovery (EOR) techniques perfected in Bakken shale formations of North Dakota and Wyoming reopen the potential of the San Joaquin Basin region.*

*This historically oil-rich region, now the third largest oil producing in America, holds newly confirmed shale oil reserve potential that holds prospects to be two- to four-times that of Bakken Shale plays!*

**San Joaquin: 6.5 billion barrels** The USGS estimates that California's San Joaquin oil field could hold 6.5 billion barrels of oil (recoverable and could approach 10 billion barrels).

**Bakken: 3.65 billion barrels** The USGS assessment found that the North Dakota/Wyoming Bakken Formation has an estimated oil resource of 3.65 billion barrels of oil.

## A proven company-building team with a solid record for creating investor wealth.

There is no question in my mind that Bob and his investors are setting the stage for a repeat performance of American Oil & Gas, only this time the stock will be **NAMG** and as before...you can get in right now for around \$1.00 a share.

I wouldn't hesitate to make that move...and I do mean right now! This San Joaquin situation is about to break wide open.

Now that Occidental has been exposed, I see a flood of new money pouring into the San Joaquin Basin. In my view, a prime target for buying will be **NAMG**.

Bob's track record is legendary in many circles; I anticipate that some investors will be loading up on **NAMG** simply because Bob and his investors are behind it.

Bigger forces are driving this however.

With the attention that is building on Southern California holdings, especially now that the big gun buyers are being

exposed... **NAMG** holds enormous upside potential that could begin a fast climb into triple-digit gains at any time now.

No question, the oil is in the ground.

One of the world's most respected oil and gas consultancies has already confirmed the resource potential in **NAMG**'s leases.

North American Oil & Gas (**NAMG**) controls 3,394 gross acres, which are currently in the advancing stages of development to production. The properties lie between two oil fields with a combined total production to date of 58 million barrels of oil and 252 billion cubic feet of gas.

**Leading petroleum consultancy Sproule Petroleum Consultants confirmed that the NAMG leases lie in the same petroleum formations as the adjoining properties, though precise reserve calculations remain to be determined.**

Initial estimates from Sproule are for unrisked prospective resources totaling 16.6 million barrels of oil and oil equivalents.

Projecting this data at \$40 oil (Oil is at \$100 a barrel today!) and current lease acreage, the value in resources exceeds \$11 per share!

In addition to currently calculated resource prospects, additional potential production zones remain to be calculated, which could add significantly to **NAMG**'s total resource figures.

Since creation of this report, North American Oil & Gas announced the acquisition of an additional 5,000 acres in leases, bringing their total gross holdings to approximately 8,243 acres with net of 5,044 acres.

## **Good news has been coming in from other sources as well.**

Pacific Coast Business Times reported earlier this year that the area's oil business is ramping up at a lightning pace. From that report:

*"Between 2010 and 2011, the number of drilling notices [in the*

*region] nearly doubled, from 2,081 to 4,033.*

"Driving that growth in activity is an even bigger resource estimate from the Energy Information

**PRE-DRILL RESOURCE ASSESSMENT, TEJON FOOTWALL PROSPECT, SAN JOAQUIN BASIN, CALIFORNIA FOR NORTH AMERICAN OIL AND GAS CORP.**

(As of November 30, 2012)

Sproule Petroleum Consultants confirm: **NAMG** has the oil and it can be recovered.

Insiders have known for years that billions of barrels of oil were locked up in the shale formations. Sproule Petroleum Consultants confirmed that with current enhanced oil recovery (EOR) techniques... that oil can be tapped and profitably extracted.

**The Sproule report is a blockbuster in itself.**

Sproule is a diversified, worldwide petroleum consulting firm in business for over 60 years. They have evaluated oil and gas reserves in virtually every country in the world, serving over 4,000 clients and completing over 15,000 projects.

You won't find anyone better than Sproule at assessing oil and gas assets.

So when their resource estimate was released late last year, it confirmed that fully developed, **NAMG** has ten-bagger written all over it!

Their 58-page report is much too long to reprint in its entirety, so I'll focus on a few key findings.

1. The NAMG prospect is sandwiched

**Sproule tapped its top people to certify the NAMG resource assessment.**

Named and signed in the NAMG report are:

John L. Chipperfield, P.Geol. Project Leader;

Senior Geological Advisor and Partner

Barrie F. Jose, P.Geoph. Vice-President, Geosciences, International and Partner

David W. Woods, P.Engineer

Administration (EIA).

The EIA now estimates that the Monterey shale alone, which sits adjacent to the San Joaquin Basin formation, could hold 15.4 billion barrels of oil—*four times that of the Bakken shale in North Dakota.*

Frankly, I don't know how these southern California developments can stay off-radar for much longer.

## The entire San Joaquin Basin is emerging as bigger than any shale oil discovery in North America.

The San Joaquin Basin should become a blistering hot spot for new shale oil activity. And from where I sit, it seems undeniable that this will produce another wave of ten-baggers that came from Bakken and Eagle Ford plays.

This you can bank on...

- I can all but guarantee you that awareness of this situation is building fast and it won't be long before the news goes mainstream.
- San Joaquin could be a Bakken or Eagle Ford on steroids...and a major beneficiary is very likely to be early **NAMG** shareholders.
- This news remains out of reach to national audiences and that sets up a very limited opportunity to move in and make some serious money off this rapidly developing situation.

When you consider that Occidental, through its front company, Vintage Petroleum, secretly leased 9,000 acres, the scale of **NAMG**'s 8,000 acre leases suggests **NAMG** may be steeply undervalued at this time.

- *Make your move right now and you might still catch **NAMG** selling for around \$1.00!*
- *But don't let a price north of a buck dissuade you.*
- **NAMG** is a solid buy to \$2.00, a buy price that could quickly triple your money, perhaps even this year.
- *Longer term, the gains can be fabulous as has already been shown by the wealth-building seen on the investor stampede into Bakken Shale oil stocks.*

between two fields that together have produced 58 MMbbl oil and 252 Bcf gas from the same targets North American Oil & Gas is targeting now. The presence of a petroleum system is already proven.

2. Drilling shows that reservoir quality oil is found in each of the targets.
3. Recovery potential goes beyond currently specified targets. There are additional zones with production potential that remain to be calculated.
4. The geological make up of the target zones can be expected to yield high recovery rates.

After pouring through 58-pages of Sproule's analysis, I'm convinced that Bob Rosenthal and his investors have landed on something even bigger than their last deal.

What's more, since that Sproule report, they've added 5,000 acres to **NAMG** holdings...nearly three times the acreage that Sproule had the opportunity to evaluate!

## NAMG offers an opening to profits that may come but once in a lifetime!

The USGS confirmed the enormity of the San Joaquin Basin shale oil field and comparisons to the Bakken shale oil field reveal how lucrative this new investment opportunity could be.

>>>Buy this stock up to \$3.00 per share...with a \$5.00 price target<<<

Fortunes were made in the Bakken and even more could be made in the San Joaquin Basin...if you make the right moves immediately!

Previously unknown companies like Continental Resources leveraged Bakken plays for explosive growth...yielding shareholder profits in excess of 530%! Continental Resources now holds over a million acres in the Bakken and is the largest producer of Bakken shale oil.

Shareholders in Bob Rosenthal's previous company made a killing on the Hess acquisition. It should surprise no one for shareholders in Rosenthal's new company, North American Oil & Gas, to close positions with bags of acquisition profit. Only this time, the buyer will most likely be Occidental Petroleum.

### A company-making play on a prolific oil-producing prospect

Bob and his investors know how to make this work. They intend to extract every drop of value for **NAMG** shareholders and I'm convinced they can do it.

Normally, I'd consider that to be the optimism of entrepreneurship if it wasn't for the fact that *these guys have done this before and they made fortunes for their investors!*

Don't wait until this hits national news.

Occidental, Exxon, Venoco, Shell and others... they're all pouring billions into the San Joaquin Basin to get at this oil. I don't see any way that this can stay quiet much longer.

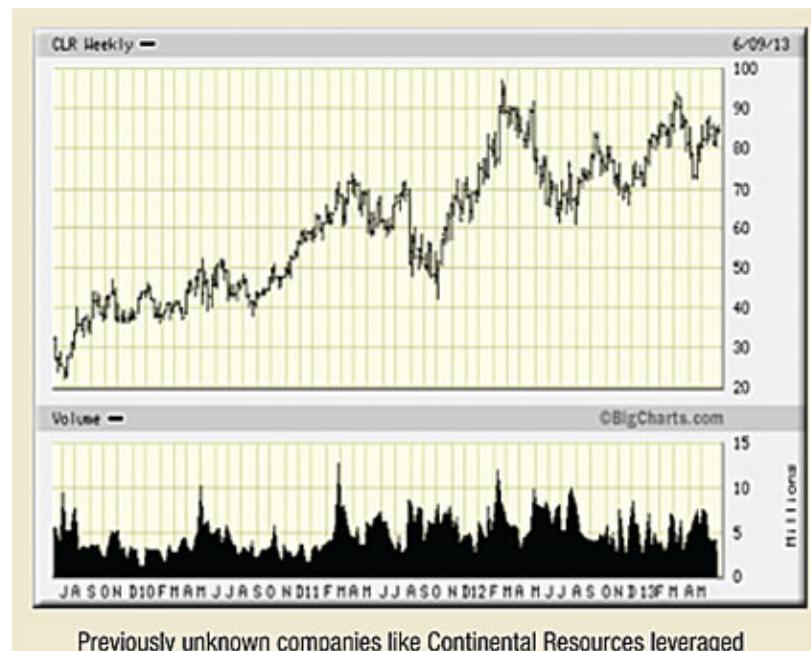

With the veil of secrecy lifting...you can expect this region to attract swarms of investors in search of a profit opportunity.

Few can match the profit potential in **NAMG**

The stellar reputation of Rosenthal is sure to attract keen interest from investors seeking an early buy on a winning play.

I see an initial run on **NAMG** propelling its price to around \$3.00 as market makers are flooded with buy orders and few willing to sell.

This could all take place in just a few days time. I can't say when, *but if you want to be on the front of this curve, I strongly recommend you move on **NAMG** immediately.*

Previously unknown companies like Continental Resources leveraged

....., then hang on tight for what could be a quick ride to a double..or even a triple.

Even if the run has already begun. If you can get in at \$2.00 or under, I recommend you do so without hesitation. Following the history of Rosenthal's prior winning formula...

\$10,000 in **NAMG** could quickly strike \$100,000 if you make it in around \$1.00.

And if you get in at \$2.00... that \$10,000 could provide you with a very profitable \$50,000 exit!

I don't indulge in fanciful speculation. These are realistic expectations based upon historically proven case studies. Looking back on the Bakken run of 2009, many investors who got in early came out with stunning gains that compare directly with what I'm forecasting for **NAMG**!

## Here are five key reasons I'm recommending North American Oil & Gas (Symbol: **NAMG**) as an Immediate Buy:

- 1 **NAMG** holds a substantial 8,000 gross acres San Joaquin Basin leases, the target area of current leasing activities that had Occidental Petroleum on a secret lease acquisition spree reported to be 9,000 acres.
- 2 **NAMG** is sandwiched between two highly productive oil prospects operated by well-known producers. Production reported by Sproule Petroleum Consultants from these two neighboring sites has totaled 58 million barrels of oil and 252 billion cubic feet of gas.
- 3 The people behind **NAMG** have done this before and made huge profits for their investors! Their previous venture, American Oil & Gas sold out to Hess for ten times the start-up price, totalling \$630 million in cash! (\$10 a share)
- 4 World renown geologists have confirmed recoverable oil. **NAMG** is already entering development and production stages with serious financing in place.
- 5 When the Street catches wind of what the Ventura County Star has exposed, the stampede of investors into San Joaquin oil stocks should be epic!

### Program the wayback machine to March 2009. Destination: Bakken Shale...

Bakken shale plays paid shareholder profits like I've never seen in my lifetime. Even the shareholders in companies with limited assets or shale oil experience made out like bandits.

Those opportunities are long gone from the Bakken, but are just getting underway in the San Joaquin Basin.

Here are prime examples of how quickly wealth can build in an oil stock like **NAMG**.

Bakken plays for explosive growth...yielding shareholder profits in excess of 530%! Continental Resources now holds over a million acres in the Bakken and is the largest producer of Bakken shale oil.

***Don't wait for this to hit national news! This is an Immediate Buy Situation!***

All of these Bakken oil stocks began their rise in nearly identical circumstances now open to shareholders in **NAMG**.

### **Starting with just \$1,000...**

In March 2009, investors in a little-known company called Magnum Resources were trading shares at 25¢. Exactly two years later, their shares traded at \$8.56.

For those lucky enough to have gotten in early, the value of Magnum **shares soared 3,380% in just 24 months!**

**Every \$1,000 invested in Magnum paid \$32,800 profit!**

A fluke? Not by a long shot. Magnum is just the first in a string of big winners.

The following companies in the Bakken also knocked it out of the park. Like the preceding example, profit calculations are made for a \$1,000 initial stock buy from each stock's low to subsequent high and by subtracting the initial investment from the high valuation.

1. March, 2009, Rosetta Resources traded at \$4.06. It peaked at \$47.82 for a **gain of 1,178%** **Profit: \$10,780**
2. May, 2009, Primary Petroleum traded for just 4¢. It peaked at 92¢ for a **gain of 2,330%** **Profit: \$22,300**
3. March 2009, Northern Oil and Gas traded at \$2.22. It peaked at \$32.69 for a **gain of 1,472%** **Profit: \$13,720**
4. January, 2009, Abraxas Petroleum traded at 65¢. It peaked at \$5.87 for a **gain of 903%** **Profit: \$8,030**
5. May, 2010, Argosy Petroleum also traded at 65¢. It peaked at \$3.40 for a **gain of 523%** **Profit: \$4,230**
6. January 2009, Wildstream Exploration traded at \$4.34. It peaked at \$12.41 for a **gain of 286%** **Profit: \$1,860**
7. August, 2007, TriStar Energy traded at \$3.90. It peaked at \$16.73 for a **gain of 385%** **Profit: \$2,850**
8. March 2009, Whiting Petroleum traded at \$10.06. It peaked at \$74.26 for a **gain of 738%** **Profit: \$6,738**
9. December 2008, Continental Resources sold for \$13.54. It peaked at \$71.95 for a **gain of 531%** **Profit: \$4,310**
10. March, 2009, Brigham Exploration sold for \$1.14. It peaked at \$37.15 for a **gain of 3,359%** **Profit: \$32,590**

Eleven stocks, all in the Bakken, with an AVERAGE overall gain of 1,371%

**>>>Buy this stock up to \$3.00 per share...with a \$5.00 price target<<<**

**NAMG** is a clear opportunity for a shot at gains of this magnitude! **NAMG** bought today at around \$1.00 could fly past my \$3.00.

"Buy To" quickly multiplying your money on an early \$5.00 target.

Believe me, news that **NAMG** holds a substantial position in the San Joaquin Basin can be more than enough to send its shares flying!

Even before **NAMG** produces its first drop of oil, you could see gains of over 500%!

That may only be possible if you get some money into **NAMG** immediately, while it can still be

**Company Name:**

North American

Oil & Gas

**Stock Symbol:** **NAMG**

**Situation:** Significant position in booming San Joaquin basin

**Buy to Price:** Up to \$3.00/share

**Near Target:** \$5.00

**Long Term:** \$10.00 and up

**Strategy:** Buy and hold, watch for future Tobin Smith's NBT alerts.

**"One of the best-kept secrets of the U.S. fossil fuel renaissance—"**

bought for around \$1.00.

## Bottom Line...

Do your due diligence right now and get ready to contact your broker!

Unknown and I believe hugely undervalued, **NAMG** shares are primed for massive gains as this region's oil resources hit Wall Street's radar.

Watch for me on the news, I could be telling the nation about the San Joaquin Basin at any time now!

Best Wishes,

TOP JUSTIN JACK TURNER
