Polar Petroleum (stock symbol: POLR)

If you haven't already placed your buy order, I suggest you consider doing so immediately. [Government sources have confirmed](#) a stunning news announcement could be issued by the Governor of Alaska which may send shares of Polar Petroleum into

Alaskan sources confirm: Governor Parnell has just rammed through legislation which could send shares in Polar Petroleum (POLR) through the roof...

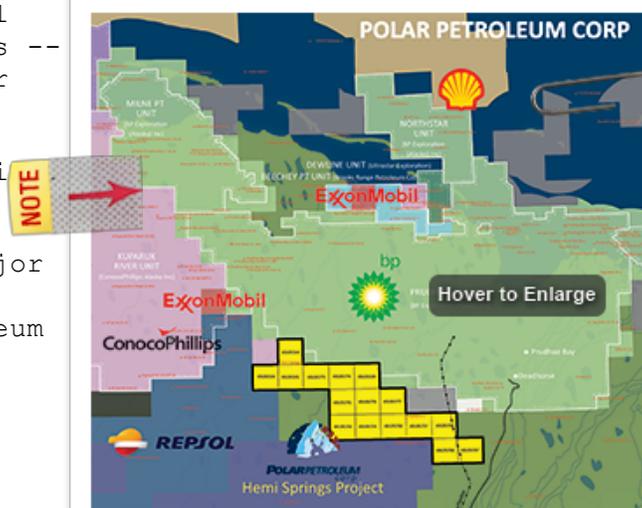

overdrive and hand you a fortune if you position yourself right now (more details on the Governor's expected announcement below).

Plus, it's come to my attention that Polar Petroleum (POLR) is now completely surrounded by the world's biggest oil companies including THREE supermajors -- ConocoPhillips, Exxon and BP. Polar Petroleum may become the target of a 'three-way bidding war' which could erupt any day, handing us massive gain

But listen. [The Governor's new legislation](#) and a potential 'supermajor bidding-war' are just two reasons I expect to see shares in Polar Petroleum (POLR) rapidly soaring higher in the near future...

The fact is, there are several more reasons why POLR shares could blast through 1,800%...

Positioned for a Takeover...

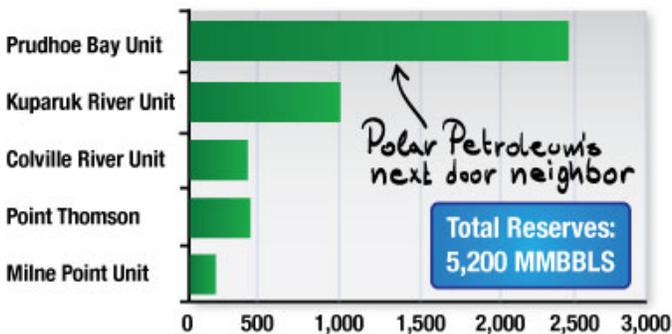

Polar Petroleum is now surrounded by supermajor oil companies...

Polar Petroleum (POLR) has positioned themselves with a 45,000 acre prime oil project in the fairway of Alaska's prolific North Slope --- a region which has already produced more than 16 billion barrels of oil --- and is known to host billions more.

Plus, their spectacular oil project is surrounded by supergiant oil fields, including the massive Prudhoe Bay and Kuparuk deposits... two of the largest oil discoveries in the history of the United States, which have already produced billions of

Alaska's Remaining Recoverable Oil Reserves by Field (MMBLS)

Source: Polar Petroleum website, Feb 2013

produced billions of barrels of light oil and still have billions more to go.

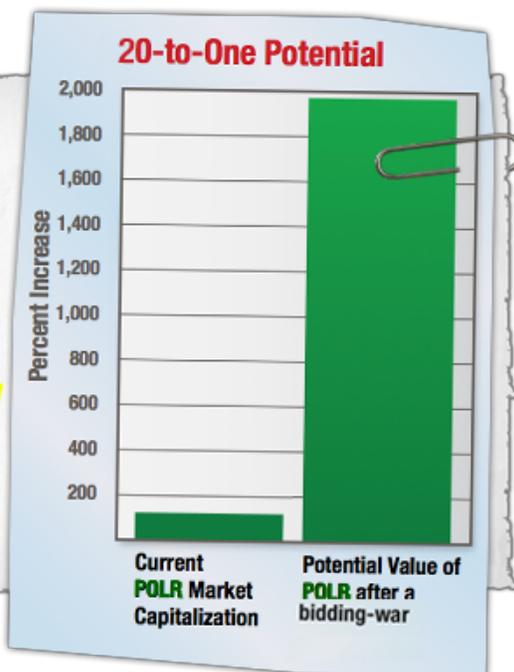

But what sends my profit-meter soaring is the phenomenal newly-identified oil deposits which Polar Petroleum (**POLR**) could be sitting on --- something the USGS has now confirmed as Alaska's answer to North Dakota's [amazing Bakken field](#) --- which has handed investors absolutely stunning profits.

Oil and Gas Resources of the Arctic Alaska Petroleum Province

By David W. Houseknecht and Kenneth J. Bird

Recent estimates of the undiscovered resources in the Arctic Alaska Petroleum Province by the U.S. Geological Survey and U.S. Minerals Management Service are **more than 50 billion bbl of oil...**

"The world's top oil companies have acquired all the land surrounding Polar Petroleum's Alaskan oil project. Exxon, BP and ConocoPhillips know there are massive quantities of oil throughout the entire region. And now, it's been confirmed that Polar Petroleum could be sitting on 550 million barrels of crude. On that basis alone, I'd be calling for the share price to blast through \$20 per share..."

Remember these three "tiny" oil companies?

- * Carrizo Oil & Gas (CRZO) jumped from a little over a buck to more than \$70 a share... for a monster increase of more than 5,500%...
- * Denbury Resources (DNR) shot from about \$1 to over \$35 for an amazing surge of 3,400%...
- * Northern Oil & Gas (NOG) ran from \$2.45 to more than \$30 a share... an increase of 1,100%...

As you may recall, all these companies started out as "unknown" oil stocks which could be purchased for between \$1 to just over \$2 per share.

share.

If you'd purchased just one of them, such as Carrizo Oil, you could've turned a \$10,000 investment into a stunning \$550,000 windfall.

Just think how your portfolio would look today if you'd acted then.

"OK Ken," some of you might be saying, "I wish I'd paid attention and bought Carrizo Oil, Denbury Resources and Northern Oil back when they were cheap. But I missed the boat, and now it's too late."

Listen, that may be true. But it's not too late to buy Polar Petroleum (**POLR**)... a company which could hand you the same massive gains we saw on Carrizo, Denbury, and Northern Oil... **perhaps more...**

Check out the tremendous increases we've witnessed in "tiny" oil stocks:

- * Carrizo Oil --- up more than 5,500%...
- * Denbury Resources --- 3,400% increase...
- * Northern Oil --- shot 1,100% higher...

But here's the one thing you need to remember: Polar Petroleum (**POLR**) may become my TOP performing junior oil stock of 2013, potentially handing us 1,800% gains... and then go on to post even bigger returns (keep reading to find out just how high this stock could go).

ate things folks, but
bagger written all over

...s scientific team recently estimated it could be sitting on [550 million barrels](#) of recoverable crude.

And at today's price of around \$90 per barrel, what's a barrel in the ground worth?

The answer to that question depends on lift-costs and several other factors which Polar's technical team will have to work out. *But let's be cautious and call it a measly ten bucks per barrel, for quality crude.*

And remember, I'm not talking about low-grade crude. No. I'm talking about potentially "unassisted flow" to the well-bore. Therefore you'll agree, \$10 per barrel could be a *ridiculously low estimate of what Polar's oil project might be worth.* Even so, it would put the gross value of a 550 million barrel asset at *around five billion dollars.*

"I'm calling for up to 1,800% gains on this stock... This could be our biggest junior oil pick of 2013..."

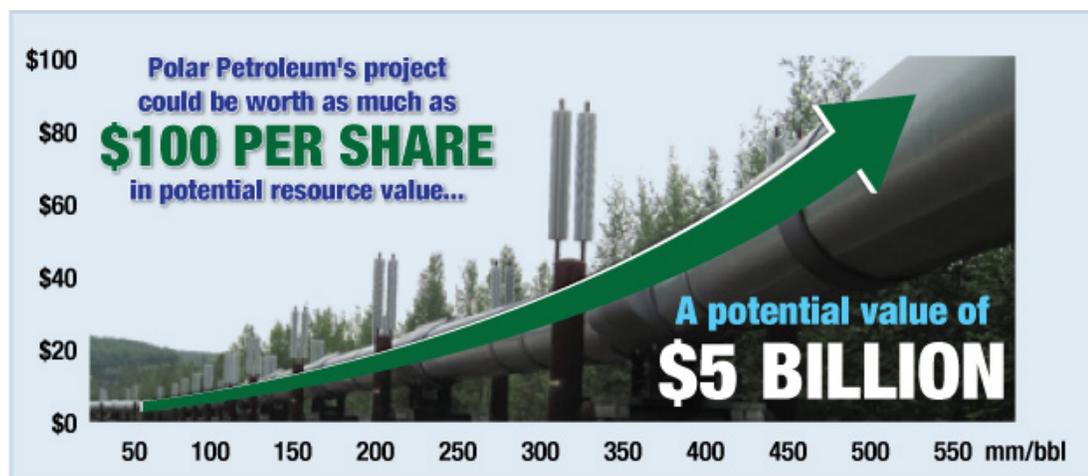

*** Buy up to \$10.00 ***

That's right --- more than half-a-billion barrels of oil. And that's not even including any shale oil resources or natural gas. Friends, that would be enough oil to turn tiny Polar Petroleum into the hottest oil stock of the year.

*Polar Petroleum (POLR) could be sitting on a stunning oil resource of **550 million barrels of crude...***

Folks, that could put Polar's stock as high as **one hundred dollars per share** (based on 42 million shares outstanding).

But let's pare it down even further, and de-risk our estimate by a whopping 80% --- resulting in a **\$20 per share target for Polar Petroleum (POLR)**. You'll agree, buying shares now while they're still relatively cheap is an outstanding speculation. You can now see why I'm calling for 1,800% gains on this stock --- and why it could be my biggest junior oil stock gainer of 2013.

Listen, Polar Petroleum has the key features I look for in a winning junior oil stock:

- * Huge potential **recoverable oil resource** with multi-billion dollar upside
- * Assets in an area-play [oil zone with mammoth, multi-zone potential](#)
- * [Drill-ready oil project](#) with high-impact upside
- * Underlying [oil price in a major uptrend](#)

And yet the fact is, Wall Street hasn't even heard of Polar Petroleum (**POLR**) --- at least not yet. My subscribers stand to make stunning gains when the 'herd' discovers this amazing stock.

Wall Street is temporarily unaware of Polar Petroleum (POLR)

--- **Buy Shares Immediately** to 'lock-in' potential profits before
"herd buying" sends the stock out of reach...

But the story gets even better...

What the supermajors know, but *have only recently acknowledged*, is that the oil-rich North Slope of Alaska doesn't just contain light oil. No. There is [extensive shale oil capacity](#), the vastness of which has only begun to be defined.

Largely untapped, Alaska's massive **accumulation of shale oil** is expected to have a [relatively high API](#) which may flow unassisted to the well-bore. Much of it can be produced using existing technology, and the big players such as **\$32 billion Halliburton** intend to do just that.

In fact, Polar Petroleum's neighbor has recently announced they could be sitting on up to [2 billion barrels of shale oil](#). That value is astonishing.

Does Polar Petroleum's stunning oil project also contain shale oil riches? They're not saying, at least not until the proper tests have been done --- but judging from the location of their project and their proximity to existing test wells, I believe it's very likely.

You see, the entire region (not just Polar Petroleum) may soon turn into a hotbed of shale oil production.

So let me summarize:

The USGS has recently confirmed it --- Alaska could be sitting on the motherlode of oil riches. One of Polar Petroleum's neighbors has estimated there could be 2 billion barrels of oil on their leases. An area-play is in the making, and \$32 billion Halliburton's involvement now makes it clear: the profits we saw in Texas and North Dakota could be nothing compared to what's coming in Alaska.

HALLIBURTON
\$32 billion

Major legislation has just been announced by Alaska's Governor..."

- * Polar Petroleum (**POLR**) has an [advanced oil project](#) in the heart of Alaska's 'mega-production zone' --- the prolific 16 billion barrel North Slope...
- * It's surrounded by [three of the world's supermajors](#) who've locked-up the neighboring multi-billion barrel supergiant Prudhoe Bay oil deposit and are desperate for more reserves...
- * There's a "[political kicker](#)" which could ignite a "new Alaskan oil rush..."
- * It's in the midst of an emerging oil play which could contain up to an additional **2 billion barrels of oil...**
- * The entire region is now believed to have massive shale oil potential which could soon send Alaskan oil production through-the-roof...
- * And geologists now confirm that Polar Petroleum could have [550 million recoverable barrels of oil...](#)

You'll agree, those reasons are *more than enough to justify purchasing shares immediately*. But is there anything else? **Yes, actually.**

It turns out, there's a "little" company which neighbors Polar Petroleum's project, directly to the southeast. **It's name is Repsol** --- and it's the largest oil company in Spain and the fifteenth largest refiner in the world. They're not quite a supermajor, but they clearly aim to be. But what are they doing up in Alaska?

Well, it turns out that Repsol is looking to become a powerhouse in the region --- and they've got the land, technology, determination, and money to do it.

In fact, Repsol recently "gobbled up" the assets of a tiny private company *right next to Polar Petroleum* in a deal [valued at \\$768 million](#). They're now sitting on more than 500,000 acres of oil leases with multiple prospects.

Multi-billion dollar Repsol could be on a "takeover binge" and Polar Petroleum (POLR**) could be their next target...**

Plus, they've made commitments to invest up to [\\$9 billion in the com-](#)

... they've made commitments to invest up to 10 billion in the coming years.

They're aggressively pushing exploration because they're convinced Alaska is about to experience a massive surge...

What does all this mean for Polar Petroleum shareholders? Simple. *Repsol is hungry for growth, and they've already acquired all the land right up to Polar's doorstep.*

If Repsol tries to expand any further, they'll bump into ConocoPhillips. If they turn the other direction, they'll bump into Exxon. If they go sideways, they'll hit BP. In other words, in order to grow any further, they'll have to talk to the guys who control the 45,000 acre lease-block right next door --- Polar Petroleum --- which sits directly on the Trans Alaska Pipeline.

Listen... if Repsol doesn't gobble-up Polar Petroleum, then there are three supermajors who could very easily beat them to it...

Folks, there it is.

The fact is, Polar Petroleum has everything we could hope for in terms of:

- * near-term profit potential...
- * long-term massive growth prospects...
- * enormous regional upside...
- * multiple technology factors...
- * multi-zone oil potential...
- * and several majors each of whom could send the stock skyrocketing in a bidding-war for Polar's assets...

What you can learn from these three billionaires...

George Soros

Eike Batista

John Paulson

Listen, you may have heard stories of the world's wealthiest people -- the likes of George Soros, Eike Batista, and John Paulson --- making billions of dollars almost overnight. They astutely sought out markets which, under the surface, were wound tighter than slingshots --- then they sat back and waited for the inevitable release.

When it happened, they made billions. **The same thing could be about to happen with Polar Petroleum.**

Polar Petroleum (**POLR**) has quietly amassed an impressive oil project encompassing some of the most valuable oil prospects in

"All knowledgeable"

some of the most **valuable oil prospects** in the North Slope region of Alaska. With a series of exciting multi-zone oil prospects and participation in the hottest oil region in the hemisphere, Polar Petroleum is entering an accelerated period of hypergrowth.

investors must own a piece of this oil bonanza immediately..."

Translation: Polar Petroleum's share price could easily go "supernova"...

In nearly two-decades as a geologist and market professional, I've rarely seen an oil company with this much **near term profit potential**.

Yet the fact is, at its current share price, the market

*"...I've rarely seen an oil company with this much **near term profit potential**..."*

capitalization of Polar

*"Are BP, Exxon, and ConocoPhillips prepping for a takeover? They've now **totally surrounded** Polar..."*

Petroleum is relatively puny. And exciting news could soon be coming out. All major indicators point to the company being valued at a higher multiple in the near-term. At that point, Polar Petroleum will be climbing the ladder of oil-industry leaders and successful investors could be in the enviable position of deciding what to do with their profits.

Investors in Polar Petroleum have been handed **a chance to multiply their money** several times over...

*"...Polar Petroleum **could be a home-run**..."*

If you want to maximize your chances of making huge profits, buy this stock now.

The markets are --- temporarily --- unaware of the enormous value waiting to explode in Polar Petroleum's share price. This is the consummate buying opportunity, albeit *one that won't last long*.

Buy Polar Petroleum (**POLR**) now before a stampede of investors begins rushing into a rising market for this stock.

*"Pick up shares in **Polar (POLR)** before it's too late..."*

The slingshot could be released at any moment... pick up shares in Polar Petroleum before it's too late...

The fact is, you need to buy shares --- FAST --- if you haven't already done so. This will likely be **your last chance to buy Polar Petroleum** at its current low levels before it soars much, much

Buy Polar Petroleum up to \$10.00

Last: 2.18

skyrockets and gets completely out of reach.

"Don't kick yourself later for missing this chance..."

"Polar Petroleum shares (POLR) are poised to explode.."

If you are a new investor to junior oil stocks, you probably missed out on all the other winners. While other investors were loading up on big-gainers like Denbury, Carrizo, and Northern Oil, you were getting left behind.

DON'T GET LEFT BEHIND AGAIN.

You could be counting your profits when Wall Street propels the market higher...

But remember, your window of opportunity is very limited... I expect to see Polar's share price soon leaping upward...

✓ TAKE ACTION

Stock: Polar Petroleum

Symbol: POLR

Sector: Oil

Region: Alaska

Target: 1,800% gains

★ Buy up to \$10.00 ★

WARNING: Take partial profits when POLR doubles...

WARNING: I insist that you take partial profits when the share price of Polar Petroleum (POLR) doubles in price from its current levels. Let the remainder of your position ride the wave of Wall Street buying which could propel the share price even higher.

Now is the time when the rubber meets the road. It's time to act decisively.

Go online and buy shares now. And get ready to make a fortune...

For maximum profits,

Ken Williams
