

The 1 Gold Stock You Absolutely, Positively Must Own in 2013

By staking 3 high-potential claims in rich African gold belts... An unknown company's quick-production "New Mining Model"... Could Make Early Investors Filthy Rich In Just a few short months

Here's how...

Fellow Investor:

While *location, location, location* is considered the "golden rule" in real estate...

...it's absolutely vital when it comes to finding stocks that can beat the market in **GOLD MINING**.

There is still a ton of smart money waiting on the sidelines for an undiscovered Gold stock with a market proof scenario. We have found only one single solitary stock which fits those criteria. That stock is **Centor Resources (OTCBB:CNTO)**.

As any geologist will tell you, if you see a senior gold mining company digging into an area with proven reserves, it's a good indication that there's generous amounts untouched buried deep within the surrounding areas.

ACTION ALERT!

Action to Take:
Immediate Strong Buy

Gold doesn't stop at the boundaries of a map. But the reality is, the big names simply don't have the time or resources to exploit every vein they come across.

Looking to boost your portfolio? Read on to find out why we believe CNTO could be the next in a list of high-flying gold stocks:

▶ **MineraAndes** – up 912% in 26mo

▶ **Batero Gold** – up 633% in 7mo

▶ **Barrick Gold** – up 276% in 30mo

▶ **Gold Fields** – up 290% in 36mo

▶ **Randgold Resources** – up 413% in 36mo

▶ **Goldcorp** – up 276% in 30mo

{Source: Yahoo Finance}

For that matter, even a significant discovery won't move the needle much on a global mining conglomerate with a multibillion-dollar market cap — even though Wall Street brokers will instruct you to park your money there. (After all, they get paid handsomely to recommend them.)

As an individual investor, the single solitary goal is to make wise decisions for oneself, and not listen to overpriced brokers and heavily prejudiced analysts. The trick in finding an undiscovered gold play is to find the smaller companies who've set themselves up alongside "smart neighbors" — which not only offers the best chance to discover and produce gold, but the best odds for being snapped up by one of the seniors on news of a big find.

Each way you are practically guaranteed to see profits: Either the stock pops based on their own positive production, or when it has deep-pocketed suitors bidding up the price.

And, best of all, you've got the satisfaction of having beaten Wall Street at their own game in the process.

Your Golden Ticket to a Legendary Gold Belt

Junior gold explorer and developer **Centor Resources (OTCBB: CNTO)** is a textbook example of just such an opportunity. Their first two mining concessions are located in a longtime hotbed of mining — the Ashanti Gold Belt in southern Ghana, Africa, more than 200 km in length, with gold occurring in quartz vein and disseminated type gold deposits; gold-bearing quartz pebble conglomerates; and alluvial deposits and oxide deposits.

A third agreement, which is so new that the ink's still wet on the contract, is for a claim in the under-explored and highly prospective Kibi-Winneba Gold Belt, just to the southeast, but in a similar strip of geologically gold-rich terrain.

Portuguese explorers first came to Ghana in the 1400s to exploit the untold riches of gold. Historically, the vast majority of gold production came from small streams and rivers draining areas with underlying oxide and primary gold deposits. With the advent of more sophisticated mining techniques in the 20th and 21st centuries, upwards of 70 million ounces have been brought to market.

But the Ashanti Gold Belt story isn't one of faded glory. Today, **CNTO's** famous neighbors include mining majors from Newmont Mining (NYSE:NEM) and Gold Fields Limited (NYSE:GFI) to PMI Gold, AngloGold Ashanti

GHANA: The NEXT Gold Rush

Industry experts compare current gold mining opportunities in Ghana to that of California in the mid-1800s. Political stability spanning 50 years, relaxed bureaucracy, rich reserves, solid

(NYSE:AU), and Golden Star Resources. They continue to extract from proven and provable reserves that could eclipse the totals of what's already been mined — with estimates of 80 million ounces or more ready for the taking.

With Gold "On Sale" at \$1350/oz, that's roughly \$108 Billion worth of Gold This is over 3x the GDP for the country of Ghana alone!

In spite of its relatively small size, Ghana is second only to South Africa in production on the continent, and was ranked in 2012 by the U.S. Geological Survey as the 10th biggest gold-producing country in the world... producing 2.9 million ounces of gold worth about \$4.6 billion last year alone.

infrastructure and inexpensive labor has made gold concessions in Ghana among the most desired in the world.

CNTO: Not Your Average Junior Mining Approach

There's no question that the Ashanti Gold Belt is as promising as ever. But even supported by an outstanding "big picture," **CNTO** represents an unusual and unique opportunity.

As you're surely aware, junior exploration can be risky. They're out there, looking for commercially viable gold, but it's hardly a sure thing. Many of them are fly-by-nights, trying to make a big find...but they burn through cash before a single ounce ever comes out of the ground...and leave investors wondering what the heck happened to their investment.

CNTO is taking a much different approach to their enterprise, which they've coined "The New Mining Model."

It's a strategy that should appeal to your conservative side, even while your investor side envisions doubling, tripling or quadrupling your investment. Gold is currently at a bargain-basement sale price. What do you think will happen to the price of this stock when Gold resumes it's uptrend back towards \$2000/oz?

Rob McEwen, the founder of Goldcorp, the world's biggest gold producer, believes gold is ultimately headed for \$5,000 an ounce

You see, **CNTO** isn't just strategically positioned alongside some of the world's most productive miners.

The company was built from the outset to create shareholder value by being self-sufficient in early project development funding through operating alluvial or surface mining. Within weeks of testing and identifying promising results in top soils and gravels, they're capable of building the basic infrastructure and bringing in the heavy equipment — excavators, dozers, loaders, wash plants and dump trucks — needed to commence production.

It's like mining on steroids — results accomplished within weeks, as opposed to the junior mining standard of years.

Behind the scenes, of course, while they generate income from that "low-hanging fruit," they'll be busy conducting testing for hard rock deposits within their properties — and, again, commencing mining as soon as possible.

Employing this strategy puts the company on course to independence and capital growth, while developing the

RAPID TIMELINE

CNTO expects to initiate its alluvial production in the first quarter 2013...while being ready for a big announcement at any time of a much, much larger gold score.

project towards the Bankable Feasibility Stage.

More important to you as an investor, rapid gold to market equals speedy ROI...and resulting benefits to the share price.

CNTO's Highly Targeted Approach

The way I see it, CNTO already has 3 ways to win...and that's before they acquire any additional high-potential claims:

Claim #1: CNTO's 40.2-square-kilometer — that's larger than the city of Paris! — Nobewam Concession is located adjacent to what may still be the single most prolific mine in the world: the AngloGold Ashanti mine in Obuasi, Ghana. It is reported that AngloGold's mine reaches production levels of 1,100 kilos of gold per month, and still has more than 40 million ounces in the ground. A second neighbor is Owere Mines in Konongo, which has proven reserves of more than 4 million ounces.

Regional geochemistry work was done over the permit area in the '70s, followed by extensive work involving regolith mapping, soil geochemical survey and follow up gravity and aeromag geophysical surveys in the mid-2000s. A 10km by 4km strike anomaly and other shear zones remain untested on this permit and will be the focus of immediate follow up work

This claim is particularly attractive in that the land owners have prevented free miners (known as galamseys) to penetrate on the lands. Typically these are primitive, manual prospectors who moved relatively freely across the country. Since 1989 there has been an upsurge in their numbers who, if left to operate wherever they wished, could undermine a commercial operation — not an issue for **CNTO**.

Claim #2: Extensive testing at the company's Ofin River Range Anwona concession, adjacent to an AngloGold property, has indicated the evidence of substantial alluvial and hard rock gold reserves, more than 2 grams per ton. Independent appraisals suggest that the alluvial reserves alone at the Anwona could reach \$250 million based on early hard rock test results. Moreover, reserves are expected to far exceed 1 million ounces of gold — that's worth \$1.6 billion based on current market prices.

Claim #3: In late March 2013, CNTO acquired another claim, a 35.5-square-kilometer concession within the under-explored Kibi-Winneba Gold Belt, a region parallel and to the southeast of its Ashanti property. While this is the most prospective of the three, alluvial gold deposits have been derived from weathering, erosions and transportation of lode quartz veins and stock works from the Birimian rocks. Bonte Mine has operated and exploited one of the richest alluvial deposits, which lie just a few kilometers away from the present concession area.

During preliminary geological mapping and soil sampling in 2011, the highest gold value from the 400 samples was 1250 ppb, with 150 samples producing gold-in-soil values greater than a threshold value. The most promising area on the concession is the area along the contact between the granitoids and the Birimian metavolcanics. Almost all the samples collected from this area yielded gold assay value more than 10ppb. Next steps will include infilling soil sampling, detailed geological mapping, and trenching, further pitting and drilling program to systematically investigate all the identified anomalies.

CNTO has got everything in order to start moving on their claims:

In addition to access to an ample supply of skilled, affordable labor, **CNTO's** properties are located near areas with strong mining resources — machine shops, fabricators, steel suppliers and other provisions — as well as electricity and transportation access.

All company mining licenses are in good standing with corporate presence in Ontario, Canada, Accra, Ghana, and Obuasi, Ghana.

You also need to know that **CNTO** strongly believes in developing strong ties with the community and its tribal chiefs, or as in Ghana called Nanas. The company has nurtured the respective Nanas and now benefit with their societal safeguard. And equally important, they've made a commitment to health, safety, and environmental stewardship to ensure positioning as a benevolent partner. That not only puts them in good stead with the locals, but makes the Ghanaian government and mining folks happy.

How CNTO Can Strike It Rich...And You Can, Too

While **CNTO** is still in the early stages of its operations, the benefit with such a small stock — currently just at \$0.80 — is that each new announcement has the potential to push share prices higher in rapid fashion.

The way I view it, there are two possible futures for **CNTO** — either of which could earn you gains of 200%, 300%, 500% or more on your money...before Wall Street even knows what hit them!

Scenario #1: Senior miners typically scoff at anything less than 1 million ounces — but a small, nimble company like **CNTO** can make plenty of profits from far smaller deposits. In fact, that's exactly what they're built to do: Employing their "New Mining Model," they're ready to get started on harvesting gold from the alluvial deposits as soon as it makes sense.

Unlike its junior explorer competitors, **CNTO** has the know-how and equipment to smelt its own raw gold. Based on the current worldwide price of gold, the company determines when to sell to the open market. When prices drop, the company plans to store its gold in a secure company-owned facility and retain it there until the price escalates to an acceptable level. When that happens, the gold will be transported to Accra (Ghana's capital city) or a nearby buyer, where the company will sell to a reputable government-licensed refinery. As production grows in the future, the company anticipates redirecting its gold production to Europe, where several well-known refineries have already been identified — and who are willing to buy at prices higher than currently achievable in Ghana.

Now, mind you, there's every indication that **CNTO** will execute on its plans to become a mid-tier gold producer in short order. But with gold demand and prices the way they are, and with reserves tightening around the world, you also have to consider...

Scenario #2: The other possibility is acquisition of **CNTO** by one of the senior mining conglomerates. As you might guess, the most likely acquirers would be other miners located in Ghana — Newmont Mining, Gold Fields Limited, PMI Gold and AngloGold Ashanti, or possibly even a mid-tier miner with deep pockets — but with limited ability or finances to do the necessary exploration.

“The majors must buy qualified juniors. They have never been successful explorers. Reserves of the majors have hit a plateau or are on the decline.” — Gold Guru Jim Sinclair

Bottom line, **CNTO** is very much in control of their destiny...and investors make out like bandits either way.

Solid Management Team with On-the-Ground Experience in Ghana

When you're investing in gold halfway around the world, you want the confidence in a management team that will serve as good stewards of your investment and with the shareholders' best interests in mind. **CNTO** has assembled an outstanding team — not only with experience in the mining sector, but solid business backgrounds and significant professional networks.

CNTO management and its advisors are equipped with cross-platform knowledge that offers insights in numerous supporting disciplines — and a diversity that helps the company rapidly adapt to real-world situations and the challenges of conducting business in Africa.

Director & CEO Joseph Maher has more than 30 years of entrepreneurial experience, including dealings with Fortune 500 companies and various government agencies. He has spent significant time on the ground in Ghana, including management of gold operations. He recently took on a role within Ghana's mining industry to reduce the liquid mercury pollution caused by small scale mining.

Advisory Board Member Shawn Harrison is a civil engineer with 20 years in mining, construction and gold plant design/fabrication, including underground mining project engineer positions in silver and molybdenum mining in Nevada, Arizona and Montana. In Ghana, he has designed and overseen the fabrication of wash plants for both small-scale miners and large hard-rock concerns.

James DiGeorgia -- Internationally Respected Authority on Energy, Precious Metals and Large through Small-Cap Stocks.

James DiGeorgia has more than 30 years of personal experience in precious metals and energy markets, and has earned an enviable reputation as a stock picker. Whether it's energy, precious metals or tech, James has an uncanny knack of identifying the next small-cap stocks before the rest of Wall Street.

In 1991, James accepted the editorship of the world-renowned and fiercely independent *Silver & Gold Report*, a precious metals advisory service. He became known as a tireless advocate of individual investors.

James authored *The Insider's Guide to Buying Gold, Silver and Rare Coins*, and was frequently quoted as an expert in the *New York Times*, *USA Today*, *Los Angeles Times*, *Money* magazine, the *Chicago Tribune*, and *Barron's*, to name just a few.

Since then, James has founded a family of successful financial newsletters that includes

Advisory Board Member Noel Neligwa Obedi

possesses a rare combination of Western education and on-the-ground experience in Africa. As a practicing field geologist/geophysicist, his diverse experience includes every aspect from geological mapping and data compilation and interpretation to soil and stream sediment sampling. His professional assignments have taken him from Scandinavia to Africa, during which time he has worked for prominent companies including AngloGold Ashanti and Barrick Exploration Africa.

the *Gold & Energy Advisor*, a monthly newsletter covering the precious metals, diamond, and energy markets.

He is also the author of the best selling book *"New Bull Market in Gold: \$1,000 Gold and the Many Ways to Profit from It"* and the *"Insider's Guide to Buying Gold, Silver and Rare Coins."*

As Gold Bull Resumes... So Will the Prospects for Miners

"[T]he escalation of the last two years is about to make a turn for the better in 2013 and that's going to enable a lot of companies to outperform gold."

— Joe Foster, portfolio manager of the Van Eck gold fund

For the foreseeable future, seemingly unending global financial crises will be a driving force in gold prices. Central banks are buying hand-over-fist. Currency wars are an ever-present threat. As ever-higher spiraling debt levels and money printing continue to wreak havoc, the silver lining — or better yet, the golden lining — is for those who seek refuge in the Midas metal as an insurance asset or store of value.

Indeed, a survey by Bloomberg in November 2012 forecasted an average of \$1,925 an ounce as of the final quarter of 2013. Individual projections included:

- ScotiaMocatta: \$2,200.
- BNP Paribas: \$1,865
- London Bullion Market Association: \$1,843
- HSBC: \$1,850
- Deutsche Bank: \$2,000
- Credit Suisse: \$1,840

What's the best way to profit from rising gold prices? Well, each of the usual methods have pros and cons. Bullion can be a solid choice, but the downsides are storing them safely and illiquidity when it comes to sell. (And the commissions are downright painful.) Precious metal ETFs are more liquid, but they're highly susceptible to manipulation.

The gold majors are easy to trade, but tend to be slow-moving and, as seen in the past few years, far more susceptible to rising costs and labor shortages. Plus, many of them are subject to political instability — mining strikes and hostile government regimes — that put many of their mines at risk.

Truly, to leverage your portfolio dollars with the possibility of a fast swing upward, many investors choose junior miners as their vehicle of choice.

But because they can move in the blink of an eye, it's even more important to understand...

Why You MUST Get into CNTO

Before the Wall Street Herd

Despite large historic production, the discovery rate in Ghana is still increasing. Many multimillion ounce at-surface open pit discoveries have been made in the last five years — and the next one could happen at any time...and it could very well be by **CNTO**.

While gold continues to make headlines, **CNTO** is simply too small at the moment to make any waves on Wall Street, which focuses on its larger, more established brethren.

But that's your secret advantage: Wall Street's ignorance could represent enormous opportunity for early-in investors.

Gold mining in Ghana could be the best secret in the game, and **CNTO** could be your ace in the hole, thanks to...

- Historically productive gold belts — that, while large, remain significantly untapped with modern technologies
- Location in a country with a developed, politically stable climate with an investor-friendly, democratic government
- A savvy management team with more than 100 years of collective mining and business experience, strong ties to the Canadian and Ghanaian mining industries, and extensive on-the-ground contacts within their targeted regions in Ghana

Keep in mind, while **CNTO** owns three claims in the gold-rich regions of Ghana, the company has expressed its intentions to pursue additional low-risk, high grade gold sites to ensure its continued growth. With management's experience of bringing new mines into production and several Greenfield properties currently under study, you can expect **CNTO** to add future properties to its portfolio as the projects test out.

The fact is, junior golds can move very fast, and in the early going, **CNTO** has all the earmarks of moving faster than most.

Whether **CNTO** begins production on alluvial deposits, makes a significant hard-rock find, or gets bought out by a larger competitor, the stock price stands to gain substantially.

CNTO has earned our *STRONG BUY* rating.

James DiGeorgia
Editor, Gold and Energy Advisor

Look at it this way...

You could take \$10,000 and buy a couple of ounces of gold, and make a few hundred dollars by the end of 2013.

Or you could buy 12,500 shares of CNTO at \$0.80 each...and *watch your money double, triple or more.*

The choice is yours.
