

TIME-SENSITIVE INVESTMENT ALERT FROM BREAKAWAY STOCKS

“Smart investors know that every decade brings them a single locked-in investment that can offer a predictable 24-fold return. But you have to spot them early. That investment is Tungsten.”

Climbing aboard Tungsten now is like buying gold at \$348 or silver at \$6. If you missed them, here’s your once-in-a-lifetime to catch up. Warren Buffett just quietly invested \$80 million.”

“The world’s most famous investor has taken a shine to what may be the most precious metal of the 21st century, tungsten.”

At just 90 cents a share, Tungsten Corp (TUNG) is a little-known enterprise that could hand us \$243,500 for every \$10,000 invested. I believe the potential is that enormous.

They’re positioned to ride the enormous coming boom in tungsten

Dear Friend:

The smartest investors in the world pounce on a stock the second they see a time-tested pattern that has a history of producing almost unbelievable profits.

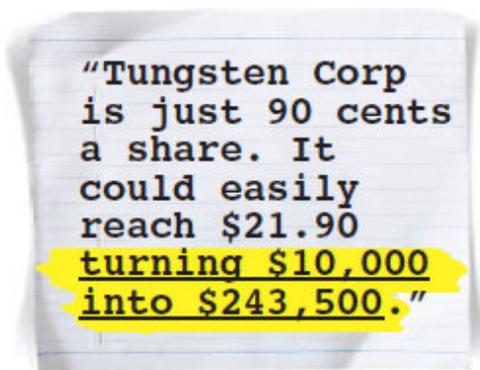

Right now, there are clues all around you. By the time most investors notice them, it’s too late. Prices will have soared. This is especially true in strategic and precious metals.

It goes like this...

There’s a metal that plays an historic role. The level of demand for this particular metal depends on TIMING. The greater the intensity of demand, the more money you can make.

Gold is a perfect example.

Everyone knows it’s a store of value against the wealth-wrecking policies of the government. But that was true when it was \$348 an ounce and it’s also true at \$1,665 an ounce, up 378%.

The difference? Timing. All the reasons that made gold a store of wealth suddenly became much more relevant, so it quickly soared 378% in price.

The same is true of silver. When it traded at \$6 an ounce, everyone knew that it was a metal in high demand with many useful manufacturing purposes. These uses only intensified—and the price swiftly soared 700% to \$48.

Now it's Tungsten's turn.

Money Morning says it well. "A little discussed metal called Tungsten is set to become one of the most sought after commodities on Wall Street." Remarkably, few investors realize this.

Buying Tungsten Now Is Like Investing In Gold When It Was \$243 an Ounce.

Tungsten's time has arrived. It's the locked-in investment of the decade. I view this strategic metal as one of the best investments you can make in 2013 and beyond.

FORBES reports that "Few investors know that tungsten was the number one metal performer in the world last year gaining 35% while most others declined in price."

The timing with Tungsten is fiercely on our side. Tungsten faces one of the greatest shortages I have ever seen. China is the world's leading producer and they're hoarding it with a vengeance because they have the planet's fastest growing economy.

Every 30 days they put up a city the size of Pittsburgh, so they desperately need it. THE INTERNATIONAL BUSINESS TIMES talks about China's growth stating, "China's growth may be ten percent." Compare that to our 1.9%.

Tungsten is used in just about everything our economy also needs to keep growing. For example, light bulbs, mobile phones, touch screens, all phases of construction, drones, drill bits and cell phones—to name just a few.

I'm Urging You to Climb Aboard Tungsten Corp At 90 cents a Share. I See This Stock Turning \$10,000 Into \$243,500 — Up 24-Fold Because Of the Huge Demand for Tungsten

Eighty MILLION!

As investors, how do we profit from all of this? I find a small, aggressive company that's moving in on this industry with speed and precision.

I did and it's called Tungsten Corp (TUNG). It's a remarkably well-run enterprise with enormously attractive properties that have previous finds of Tungsten. More on that in a moment.

This is absolutely the best way to go. The mining giants are of no use as investments to ride this unstoppable trend. If you're lucky, they might move up 3%. Not much of a reward.

A successful small natural resources stock with able management can give you 12 years of gains in 4 1/2 months. Seriously.

I'm sure that you never heard of Avalon Rare Metals. It went up 16.5 times. \$10,000 hit \$165,000. Rare Element Resources shot up from 48 cents to \$14—that's 29 times—turning \$10,000 into a jaw-dropping \$291,600. And Revett Minerals, Inc. soared from 35 cents to \$5.00. \$10,000 became \$142,857.

MONEY MORNING

Only the news you can profit from

Why Warren Buffett is Loading Up on Tungsten

By Don Miller, Contributing Writer

"...the world's most famous investor has taken a shine to what may be the most precious metal of the 21st century—tungsten. Tungsten is a super-hard metal used in everything from armor-piercing tank shells to wedding rings."

"And the world is running out of it—fast. That spells opportunity for savvy investors like Warren Buffett. He just made a shrewd move to lock up supplies of a critical resource, investing \$80 million dollars."

"Tungsten is more than just an extremely hard metal. Indeed, modern life virtually revolves around it, and in most cases, there is no substitute."

FORBES says Tungsten was best performer in the world

"Few investors know that tungsten was the number one metal performer in the world last year gaining 35% while most others declined in price."

Forbes

Now Is Your Opportunity to Get In on Tungsten While It's Just \$245 a Pound.

Thanks to Locked In Demand and Predictable Shortages, I Believe That It's the Next Big Thing

Just like the demand for gold was predictable when you look back and the buying surge in silver was inevitable, the wave

of worldwide demand for tungsten has just started. My advice?

NOW IS THE TIME TO CLIMB ABOARD AND BUY TUNGSTEN. I FIRMLY BELIEVE THAT IT'S LIKE BUYING GOLD AT \$348 AND SILVER AT \$6. WHEN YOU LEARN WHAT TUNGSTEN DOES, YOU REALIZE HOW MUCH WE NEED IT AND HOW TRULY ENORMOUS THIS OPPORTUNITY IS.

THE CHINESE ARE GOING HAND OVER FISTIN HOARDING IT. THIS IS DRIVING UP PRICES TO HISTORIC HIGHS—AND NO END IS INSIGHT. I BELIEVE THAT TUNGSTEN CORP CAN BECOME A MAJOR PLAYER IN THIS EXTREMELY VALUABLE,

An EXPLOSION in Tungsten is predicted

"A little-

LITTLE-KNOWN STRATEGIC METAL.

**Tungsten Corp's Properties Are Among
the Most Interesting I've Ever Seen.
The U.S. Government Found a Fortune
In Tungsten On Them In the Forties.**

This Is News...

Tungsten Corp has unique and promising properties in Nevada and Idaho. Let's talk about Nevada first. Their claim is in an area called Cherry Creek. In 1872, silver was discovered on this property there and around 6 million ounces were recovered.

Even today, this district today holds the potential for 49 million more ounces of silver along with significant amounts of gold. When you find gold and silver, odds are extremely high that you will also find Tungsten.

By 1874, so much money was being made, it became a thriving hub of commerce. The population soared overnight and it became a thriving city. By 1915, large amounts of tungsten were suddenly discovered.

Tungsten was an important discovery at the time, but there wasn't an urgent need for it because the many sophisticated uses for it didn't yet exist.

Today, Tungsten Corp (TUNG) has 97 claims on this Cherry Creek property. I regard it as a major asset considering its past history of Tungsten discovery. There's more exciting news.

**The U.S. Government Needed Tungsten For World War II to Make
Weapons. They Found One of The Largest Deposits In North
America on Our Nevada Property**

During World War II, this remarkable strategic metal was needed to make weapons, ammunition and other vital defense goods. So the U.S. Government made a deal with the family that owned this Cherry Creek property since the early 1880s. One estimate has that 35,000 tons of it was taken out of the property, an immense figure for tungsten.

**For the Next 64 Years, the Mines Went Quiet. It Got Lost In a Vast
Bureaucracy That Forgot It Existed. It Was Discovered By the
Shrewd Management of Tungsten Corp**

Not surprising, after the war was over priorities changed. The people who ran these war programs returned to private industry. And the huge tungsten strike at Cherry Creek in Nevada was forgotten.

is predicted

"A little-discussed metal called tungsten is set to become one of the most sought after commodities on Wall Street."

Until Tungsten Corp found it.

Spotting opportunities like this is the hallmark of a shrewd, forward-thinking management that spots value early. They started to negotiate with the 78-year-old owner of this mining empire whose family has possessed these properties since the 1880s.

This is a key business point. Since it was owned by one family for so long, not many people knew what happened on these properties. That spells opportunity for those who do.

At the end of the meetings, a deal was struck that would give them rights to explore for tungsten on these remarkable properties. Down through the decades, the uses for Tungsten have skyrocketed. Demand today couldn't be greater.

THE BLACK LIGHT SECRET: THE ART OF FINDING TUNGSTEN

The initial searches on the Cherry Creek property are promising. Let me be more specific. One quick way to know if a property contains tungsten is to use a black light. When you shine it on the ground, the tungsten becomes immediately visible and shines

brightly.

When this was done on their property, it came though like gangbusters. That wasn't surprising. Remember, the U.S. Government had found tungsten in large quantities to fuel World War II's demand. Some say it might have been the single largest amount of tungsten mined in America.

It's a Mining Secret That Works: Find Tungsten Where It's Been Found Before

The fact that Tungsten was previously found is a key point. I like this strategy for a major reason: it helps increase the odds of future finds.

Mining experts know that the best place to go is where it's been previously mined. The U.S. Government struck tungsten, mined all they needed, and then walked out.

This makes me quite optimistic about what Tungsten Corp can find. In fact, this exact strategy is behind the boomin gold and silver. Countless mines are now being reopened because the price of both metals have gone so high.

CNN/MONEY says
Tungsten Is going
to be RED HOT

"Tungsten, one of the hardest metals in the world and used for everything from drill bits to light bulbs to touch screens, is suddenly hot."

CNN
Money

In Alaska, for example, the Open Road gold mine produced 700,000 ounces around 1911. Then the mine was abandoned due to low gold prices and high labor costs.

Thanks to high gold prices, it recently reopened with great enthusiasm, employing 125 people. I see the same possible situation for Tungsten Corp. The U.S. Government in the 1940s was finding tungsten hand over fist. Now we're coming back for more!

Their Claim In Idaho Has a History of Past Tungsten Strikes. From 1953 to 1955, \$15 Million Was Found. At Today's Prices It Could Be Worth 10 Times This Figure

Tungsten Corp (TUNG) has a claim at the historic Wild horse Mine in Custer Country. During the early fifties, approximately 28 tons of tungsten was found by open-pit mining. In 1980, additional drilling was done and inferred resources of tungsten were indicated, another positive sign.

Idaho State University reveals in a report on the state's most valuable natural resources, tungsten is right up there. In their report they state, "...Tungsten production was made on near by Wild horse—from 1953 to 1955, total production came to \$15 million dollars.

And that's at the old historic price. Today's prices make this strike probably ten times more valuable. Like the Nevada property, previous finds make them much more valuable for Tungsten Corp. (TUNG)

Tungsten Is Making Headlines Across America—And the Stampede Hasn't Even Started

Remember the single most important word in investing that I mentioned earlier? TIMING. Your timing on tungsten is flawless. Demand is just ramping up, China is grabbing everything in sight, and there's NO substitute for tungsten and the need for it has never been greater. This adds up to a sharply higher price.

- **TUNGSTEN INVESTING says it's used in booming energy technology:** "Now is the best time to invest in the metal used widely in energy efficient technologies."
- **HARD ASSET INVESTOR reveals that it's a worldwide boom:** "Global demand for the industrial metal tungsten is growing robustly."
- **THE MINING JOURNAL says demand is soaring like crazy:** "In the past two years, tungsten prices have doubled to record highs..."

- **CNN/MONEY writes that the rush is just starting:** “Tungsten, one of the hardest metals in the world and used for everything from drill bits to light bulbs to touch screens, is suddenly hot.”
- **INVESTMENT UNIVERSITY says it’s running the world:** “Tungsten is the little-known metal that’s quietly running the world.”
- **SEEKING ALPHA says we need this metal badly—period:** “It’s unique properties make the element critical to making a wide range of items...”
- **THE BBC says all around the world it’s in demand:** “Tungsten is one of the world’s most utilized metals...”
- **FORBES says that it’s used in new technologies:** “Increasingly, tungsten is increasingly finding its way into new technologies.”

Stocks That Return Tenfold Profits Have a Great Similarity That Can Make You Rich If You Recognize It And Act Promptly. Let Me Explain How Tungsten Corp Fits the Bill

Making a great deal of money in a little-known stock like Tungsten Corp. isn’t a mystery. I’ve done it before and the rules to follow are very simple.

Concentrate on the industry and examine the specific strategy the enterprise employs to achieve its goals for success. For now, forget about the price of the stock.

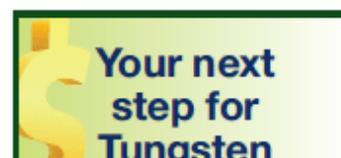

If the strategy is sound and the industry is promising, the stock price will eventually rise, often dramatically. But don’t focus on it initially.

The attraction of Tungsten Corp. is that I believe that it’s in the right business with a very smart strategy of prospecting where this strategic metal was previously found. Even a small Tungsten strike could send them up ten-fold or more.

**“The fact that
Tungsten was
previously found
on both properties
is huge for us.”**

Success in this industry is extremely well-rewarded. Here’s a group of small enterprises that were practically unknown. They scored big successes in their fields because they focused on the right things—building their businesses. Little-known investments like these are how average investors could turn a modest sum into a life-changing one.

- **UP 17.7 TIMES: from 90 cents a share to \$16.** \$10,000 turns into \$177,000 in Imperial Metals Corp.
- **UP 15 TIMES: from 10 cents a share to \$1.50.** \$10,000 turns into \$150,000 in COROMining

- **UP 18 TIMES: from \$1 a share to \$18.**
\$10,000 turns into \$180,000 in Boliden AB.
- **UP 29 TIMES: from 48 cents a share to \$14.**
\$10,000 turns into \$291,600 in Rare Element Resources
- **UP 14 TIMES: from 35 cents a share to \$5.00.** \$10,000 turns into \$142,857 in Revett Minerals, Inc.
- **UP 11.4 TIMES: from 25 cents a share to \$2.85.** \$10,000 turns into \$114,000 in Lydian Internatuional.
- **UP 16.5 TIMES: from 50 cents a share to \$8.25.** \$10,000 turns into \$165,000 in Avalon Rare Metals.
- **UP 11.3 TIMES: from 20 cents a share to \$2.25.** \$10,000 turns into \$112,500 in Scorpio Mining.

The historic stock prices above reflect the low of the security and then the subsequent high. This gives you a sense the potential profit that could have been made.

America Is Just Waking Up to the Fact That China and Russia Are the Clear Winners In Mining and Finding Tungsten. It Will Soon Become a Priority: Find Tungsten in the U.S.

It's common sense: if we have a military conflict with China or Russia, they sure and heck are NOT going to be sending up Tungsten so that we can build weapons.

"Rare Elements Resources was once a 48 cent stock no one heard about. It hit \$14 — up 29 times.

\$10,000 became \$291,600."

Sure, we have stock piles, but how long will that last? Please take a look at this chart. I find it genuinely shocking. We have so little Tungsten, **WE'RE NOT EVEN ON THE CHART. THIS HAS TO CHANGE.** We can't rely on China and Russia.

As investors, this is good news because there's an official green light flashing for finding Tungsten in safe, secure areas. I believe that America is finally waking up to the danger we're facing by relying on others for this strategic metal. **THE NATIONAL** writes that "China's economic might is the biggest threat to the U.S."

Jack Lifton Is an Expert On Tungsten. He Shares His Expertise With Congress

Here's a small excerpt of what he said. He gets to the point about the importance of Tungsten and our ability to find it in the U.S., exactly what Tungsten Corp. (TUNG) is doing. Mr. Lifton tells Congress...

“A last thought to keep in mind when you think about Tungsten is that in order to armor plate our warships and tanks, we need tungsten. Should we just ask the Chinese to keep supplying us even if we should go to war with them or one of their allies like North Korea?” Look at this chart. It’s shocking...

This chart makes my point: The U.S. isn’t even on it! there is a new urgency to find Tungsten in politically safe areas, and that means the United States.

Why I’m Convinced That Tungsten Is On the Verge of another Huge Run-Up: It’s Already Soared from \$200 a Ton to \$450 Over Just Two Years—Up 125%

Supply and demand are two long lost words for most investors, but they play a critical role in the price of Tungsten Corp’s stock price.

The reason why I’m so excited about our opportunity to make a great deal of money is the fact that supply and demand are working enormously in our favor. It’s now just beginning to make headlines across America.

China can’t get enough tungsten. They’re hoarding it like a billionaire miser out on a ruthless crusade that says to hell with the rest of the world. The demand for tungsten is almost unlimited and the supply is very limited. Consider...

FORBES Reveals the Real Reason Why Demand is Soaring Beyond Belief...

“Why is Tungsten rising in price? Like several other metals, the Tungsten market is controlled by China. The concern is so great, that in 2011, the UK Geological Survey put Tungsten at the top of the list of economic metals whose supply is at risk.”

“This mega-trend could turn a small amount of money into a life-changing sum for you because it’s now unstoppable...”

Economic advisor DART/CHINA states, “Consumption of Tungsten is expected to increase further. End users largely depend on China.”

MONEY MORNING makes an excellent case: “The problem is that supplies of Tungsten are desperately short. That’s because China has, according to some estimates, more than 80% of the world’s supply—and it has stopped exporting. That means the rest of the world is scrambling to find new resources and open new mines...”

Soaring prices reflect this positive trend for us as investors. And the

Country/Continent	Production In Tons
China	67,000
Russia	2,800
Bolivia	1,200
Vietnam	1,150
Austria	1,000
Portugal	800
Africa	800
Peru	550
Canada	400
Thailand	250

best news is this: **THE SHORTAGE IS JUST STARTING.** That's precisely what I mean by timing, the essence of successful investing. Consider what else the press is beginning to report about the growing lack of supply of this critical metal...

THE BRITISH GEOLOGICAL SURVEY calls it very rare:

"Tungsten is a hard, rare metal of critical and strategic importance. It ranks among the scarcest elements on earth..."

YAHOO FINANCE says it coming:

"A global tungsten shortage is looming...China's factories are ravenous consumers—It should be no surprise that tungsten prices have surged."

FORBES WARNS about shortages:

"The world is running low on tungsten—why you should care. It's a crucial but disappearing resource that affects us all."

MINING FEEDS magazine says beware of China:

"Did you know that tungsten is on their hit list? China is the world's largest producer of tungsten..."

RESOURCE INVESTORS says China never stops:

"The trouble with tungsten is that Chinese *domestic* demand is overtaking supply."

MONEY MORNING calls it hoarding:

"Tungsten prices doubled since China restricted sales..."

**"Please Give Me an Overview of
What Tungsten Is Used For..."**

I briefly named a few uses while describing the dynamics of the industry. But you should know more. Specifically, what it is essential for. Try and imagine a world without these products or services, not to mention the fact that America could be put at risk militarily.

Turn on your TV set. Listen to the radio. It seems to me that all around the world, our danger level is rising, and quite substantially. We can't wait until we run short of Tungsten. By then,

sadly, it's too late and we are in dire trouble.

DEMAND IS NOW COMING FROM BOOMING HI-TECH INDUSTRIES...

**"YOU CAN'T WAIT
ON TUNGSTEN
CORP. THE
SHORTAGE OF
TUNGSTEN IS
GETTING OUT.**

**THIS COULD DRIVE
THE STOCK PRICE
UP TEN-FOLD."**

This is very good news for us. MONEY MORNING reports, "High tech industries are driving demand even higher. Tungsten is vital to the manufacturing of electrodes used in solar panels and nuclear equipment. More importantly, it's a vital component in the touch screens of smart phones and tablet devices now exploding in popularity around the world."

They add, "The problem is that supplies of Tungsten are desperately short. That's because China has almost 80% of the world's supply..."

Tungsten has the highest melting point of any metal, it's the second hardest substance known to man, and it conducts electricity well. Look at all the different uses that are vital to our economy and lives...

Light bulbs	Weapons systems	Rocket engines
Mobile phones	Ammunition	Jewelry
Computer monitors	Drone spy planes	Electron microscopes
Cell phones	Airplane parts	Missiles
Touch screens	Drill bits	Race cars
Surgical instruments	Carbide hand tools	Ski poles

I Invite You to Join Us! I Have Never Been This Sure About a 90-cent Stock That Could Turn \$10,000 Into \$243,500. It Is the Perfect Storm to Make a Potentially Huge Gain In

Remember the supply and demand concept. It's the heart of an investment strategy that has worked superbly for us in the past. It impacts every business, but natural resources in particular. THE DAILY TIMES writes how "Tungsten prices have hit record highs..." because demand outstrips supply.

It's fair to say two things. First, demand is only going up. It already is. THE TELEGRAPH is right when they talk about "a global trade war for tungsten."

Second, prices can rocket up like you can't believe because there's NO substitute for Tungsten, none!

This is what I would do right now. I'd call my discount broker and buy as much of Tungsten Corp's stock that I felt comfortable with. I'd get a toe hold on it at the very least. Success in strategic metals and natural resources is richly rewarded. Remember...

Spectacular Gains Like These Could

**"IMPERIAL
METALS –
UP 18 TIMES –
from \$1 a
share to \$18.
\$10,000 grew
to \$177,000"**

Easily Be Yours In Tungsten Corp.

**\$10,000 grew
to \$177,000**

Remember, Avalon Rare Metals went up 16.5 times. \$10,000 became \$165,000. Rare Element Resources went from 48 cents to \$14—that's 29 times—turning \$10,000 into \$291,600. And Revett Minerals, Inc. soared from 35 cents to \$5.00. \$10,000 became \$142,857.

Call your broker now. Tungsten Corp (TUNG) is only 90 cents a share at the time of this writing. I promise you this: China isn't going to stop hoarding it and that spells sharply higher prices.

As you read this, their grasp on this strategic metal has grown even stronger. Shortage and higher prices could make us more money than you ever imagined, turning \$10,000 into \$243,500. Climb aboard today!

Sincerely Yours,

Eric Dickson, Editor
