How to Profit From The Great American Oil Boom Just Like Warren Buffett?

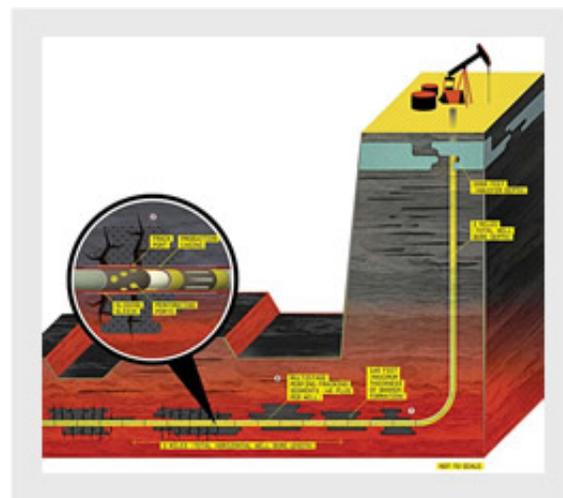

Warren Buffet, the world's number one investor and one of the richest men on the planet recently made three very large bets that had the financial press somewhat surprised.

The first was when he bought Burlington Northern Santa Fe rail for \$26 billion, his largest acquisition to date. Buffett called the move an "All in wager on the US economy" but upon closer look, could it really be an all in wager on the hydraulic fracking boom that is sweeping the country?

The railroad is perfectly positioned to not only move crude but also move the equipment needed for fracking in the Bakken Shale region of North Dakota, a region that is one of the hot spots on the newly energized US energy sector thanks to the technology of fracking, which is the use of sand and water to fracture shale rock to extract more oil than was previously available with older drilling methods.

If you combine the BNSF rail play with a more recent \$500 million dollar bet that Buffett made on Suncor Energy which produced 328,000 barrels per day of tar sands crude, using fracking so far this year.

And third the \$3.74 billion dollar buy of Exxon Mobile, it seems the Oracle of Omaha really likes what he sees in this new energy revolution we are seeing thanks to fracking...

But this begs the question what is the small investor to do to cash in on the fracking revolution?

You could buy a share of Berkshire Hathaway, Buffett's holding company, but that would run you over \$173,500 for one share. Buying Exxon is the type of slow, long term play that Buffett loves but does not really suit the smaller investor looking for huge gains quickly.

“In my research on this question I have come across a little known gem of a company that is right in the center of the fracking revolution that Buffett and the large institutional investors are betting on.”

The company is called Tiger Oil and Energy Inc. (TGRO) and they are a small company based in Nevada. What Tiger Oil and Energy Inc. (TGRO) does is locate either wells that were once producing oil before the advances in fracking came about and then reopen those wells using the new fracking technology, or find wells that are in presently productive regions and begin drilling, of course using fracking as well.

Tiger Oil and Energy Inc. (TGRO) focuses in two highly productive region of the US at the moment Kansas and Oklahoma.

Oklahoma is the 3rd largest producer of Natural Gas in the country and the 5th largest producer of crude.

Kansas is the 9th largest producer of both Natural Gas and Crude in the country..

The obvious brilliance of the Tiger Oil and Energy Inc. (TGRO) business model is that they are either going into a well that has produced profitably in the past or to an area with many current operating wells and using the most up to date technology available to either restart or begin production. It is just plain common sense to grasp that if there was oil being pulled in the past using antiquated methods and now Tiger Oil and Energy Inc. (TGRO) comes in using the latest extraction techniques that have proven time and time again to massively increase oil extraction amounts where ever they are tried, then we have a profitable formula.

On the new drilling sites Tiger Oil and Energy Inc. (TGRO) is partnering with experienced drillers and once again using cutting edge fracking technology to ensure the maximum extraction.

An example of such a joint venture was just announced by Tiger Oil and Energy Inc. (TGRO). The company has just partnered on three new wells in Crowley County Kansas with Texas operator ToTo Energy.

ToTo already has 100,000 acres under lease in Kansas and is up and running on 8 wells. They are exactly the type of experienced operator that Tiger Oil and Energy Inc. (TGRO) is looking to partner with.

One of the other things that impressed me about Tiger Oil and Energy Inc. (TGRO) was the depth of experience on the management team. The company is headed up by Ken Liebscher Ken has a wealth of international drilling and mining experience and has 35 years of corporate management under his belt. Ken headed up a major expansion for a manufacturing firm that he was a senior executive in and grew the revenues to north of \$300 million dollars. He is just the type of seasoned veteran that I look for in my research for hidden value in the small cap market.

So not only is Tiger's leadership strong the company is riding on the back of what is the biggest revolution in American Energy this century. There is a reason why Buffett is so focused on energy at the moment.

Fracking has literally changed the landscape of American energy and is providing the biggest bright spot in an otherwise very lackluster economy.

According to Mark Finley of British Petroleum in 2011 thanks to fracking the US surpassed Russia as the biggest producer of natural gas in the world.

US oil exports are up 150% in the last three years.

US petrol trade deficit is down to \$244 billion from \$500 billion in 2008.

US crude production is up from 5 mill barrels per day in 08' to \$7 million barrels per day today.

US oil imports are at the lowest levels since 1999.

And all of this good news is due to the amazing fracking breakthrough. As small investors it would be ashamed to miss out on what the experts are calling "The Great American Oil and Gas Boom".

"After doing a lot of digging I am confident that Tiger Oil and Energy Inc. (TGRO) is a perfect little gem for the small investor who wants to ride the fracking wave to huge returns."

The company has a simple and solid business plan, basically take full advantage of the available fracking technology to increase production in older wells and break new ground on wells in proven areas in partnership with proven performers. Clearly the revenue model has been around since man discovered oil, once you have found it you have the most saleable

commodity in the world on your hands so getting rid of it is no problem whatsoever.

Tiger Oil and Energy Inc. (TGRO) has my full seal of approval and I think is a perfect play for the small investor wanting their share of the fracking revolution..

***Editors Note:** We have received many questions and comments asking how to invest in stocks and shares. To buy and sell stocks you'll need a brokerage account, we have compiled a PDF list of the best and most trusted online brokers. [Click Here to Download the PDF \(http://invests.com/wp-content/uploads/2013/12/brokers.pdf\)](http://invests.com/wp-content/uploads/2013/12/brokers.pdf)*

Also note when buying shares there is no minimum. It is possible to buy a single share or 100,000 shares. Most online brokers will be happy to assist you in the process.
