

JOHN MYERS THE MYERS' LETTER

DECEMBER 2013

INVESTMENT EXPERT & MINING GURU

AN OIL SHALE GIANT IS BORN UP NORTH AND WALL STREET IS CLUELESS

Only the top energy insiders and a handful of high-powered energy investors are aware...

Centor Energy (CNTO) just found out its 21,685 acres in Saskatchewan are soaked in oil – over a *billion barrels of accessible Oil Shale* – and this massive treasure comes with an instant \$100 million bonus.

Buy CNTO now – this secret won't keep for long – the stock is **set to surge from \$1 to double digits!** And then maybe surge again as **Centor goes global.**

Fellow Investor,

I'm John Myers, editor of *Secret Stocks*, and I've just uncovered the one stock every profit seeker should own. The name of the company is Centor Energy and as you are about to learn...

Centor (CNTO) could be the most spectacular investment you'll ever make

We are witnessing the birth of a new oil shale giant... a new major oil company... a new way for individual investors to make an oil fortune... and Wall Street doesn't even realize what's happening. Only a few high-end energy investors know anything about what I'm revealing to you here.

I'd be shocked if you've heard of Centor Energy. This unknown \$47-million small cap only started trading publicly a few weeks ago. It's a monumental ground-floor opportunity for investors like us. Share price is now \$1 and my analysis shows the company should be trading right now for \$15.87.

I'll share my analysis and calculations with you in a moment.

The primary message right now is simply this: Get **CNTO** into your portfolio as soon as you can. Buy **CNTO** today – before Wall Street fund managers and brokers start calling their fat-cat clients and send before Wall Street fund managers and brokers start calling their fat-cat clients and send share price over \$1... over \$5... all the way to where **CNTO** belongs – at \$15.87 a share!

Imagine, if you can, making a single \$5,000 investment and watching it take off like a rocket, never leveling off until your stake climbs to \$78,564.

Hello financial freedom!

On the other hand, imagine how you'll feel if you take no action on the information I'm giving you here. You'll be watching from the sidelines as **CNTO** climbs and you'll be kicking yourself in the pants for not jumping in today.

The Wall Street Journal headlines are already here: This is the NEXT BIG BOOM IN OIL!

On November 8, 2013, The Wall Street Journal published this headline:

THE WALL STREET JOURNAL.

***“OPEC Expects North American
Shale Oil Output to Jump”***

LONDON, 11:38 am – Benoit Faucon files the news that “OPEC changed its tune Thursday,

Oil Shale Saves the Day! Now It's the Future of Energy!

Oil shale is an organic-rich, finely grained sedimentary rock from which liquid

hydrocarbons called shale oil is produced. Shale oil is a widely used substitute for conventional crude oil.

acknowledging new extraction technology could sharply cut the need for the group's own oil."

Every financial publication under the sun will be touting the awesome potential of the oil industry's next big boom – *oil shale production*. And those articles will likely feature **Centor Energy (CNTO)** because the company's on its way to becoming one of the leading oil shale producers in North America.

This oil shale revolution is so huge it's difficult to grasp at first.

The U.S. Geological Survey estimates there are 2.5 trillion to 3 trillion barrels of proven resource of oil shale throughout the world. *That's double the world's total of conventional oil reserves.*

The International Energy Agency (IEA) says shale oil production will send shock waves through the global oil trade over the next 5 years, predicting North America will overtake Saudi Arabia as the world's top oil producer by 2017.

The best way for individual investors to profit like a bandit from all this is to buy **CNTO** right away.

CNTO is ready to surge like NOG, KOG and COG

In March of 2009, Northern Oil and Gas (NOG) was at \$2.60 a share. Two years later, it was trading at \$34 – a tremendous 1,300% gain. At the same time, Kodiak Oil and Gas (KOG) surged from \$0.20 to \$10.75 for a life-changing gain of 4,280%.

Cabot Oil & Gas (COG), like NOG and KOG, explores for "unconventional" oil and natural gas. And like Centor, Cabot was once small – but is now \$14 billion in size. COG is up 35% YTD and its revenues are set to grow another 45% this year and another 40% the following year. However...

Centor Energy (CNTO) looks to surge about 2,300% virtually overnight!

That's why I'm telling you and all my subscribers to buy **CNTO** today!

Deep-pocketed Wall Street experts will go nuts when this news finally crosses their desks... one small cap, Centor Energy, it is now confirmed that, based on the 51-101 Engineering Report is sitting on about \$100

There are 2.5 trillion to 3 trillion barrels of proven resource of oil shale throughout the world, according to official U.S. Geological Survey estimates. That's double the world's total of conventional oil reserves.

According to the International Energy Agency (IEA), shale oil production will send shock waves through the global oil trade over the next 5 years, predicting North America will overtake Saudi Arabia as the world's top oil producer by 2017.

As an early investor in Centor Energy (CNTO), you'll be in perfect position to pocket potential profits that could top all expectations. Oil Shale is, beyond a doubt, the next big energy boom. And Centor could be one of North America's first oil shale producers. The stock could spike from \$1 to over \$15 as word of Centor's 51-101 results spreads. **Buy CNTO now!**

USA! USA! USA! America's Quest for Independence Propels CNTO

Troubles in the

Centor Energy report, is sitting on about \$700 billion gross worth of oil.

Here's the exciting part: 1.1 billion barrels of oil is Chapman's most realistic estimate. The engineering company's high estimate is an amazing 1.4 billion barrels.

Imagine extracting 100,000 barrels of oil a day... 36.5 million barrels a year... for the next 38 years! That's how much oil Chapman says is sitting on Centor's 21,685 acres up north in Saskatchewan.

Act today and you can get **CNTO** for about \$1. And isn't that the kind of stock you've always dreamed of owning... one that's worth 23 times its selling price! This is your chance to make all those dreams come true.

But you must get in before Wall Street if you want to biggest profits. Wait a week or even a day and this \$1 stock could be near \$2... blow past \$6... and then spike to where it belongs at \$15.87. How's that for short-term performance?

Longer term, CNTO could go from \$15.67 to \$59, if it's not bought out

I'll show how that can happen, but first comes the short-term surges.

But before I show you why the immediate surge from \$1 to \$15.87 is already in the cards, I must tell you a little secret. Well, it's not really so little... this secret is, by all estimates, \$100 million to **Centor Energy (CNTO)** and its investors.

And yes, it is yet another reason why **CNTO** belongs in your portfolio as soon as possible...

CNTO's \$100 Million Bottom-Line Bonus!

Centor's oil-soaked acres are up north, in Saskatchewan, Canada, where 13% of its revenue comes from mining and petroleum.

Saskatchewan is the size of Montana, Wyoming and Colorado combined. This land mass would cover most of our east coast, from New York to North Carolina. Yet, a scant 1,073,107 people live there... you might run into 4 people per mile.

Middle East? So what! America's breaking free of OPEC and taking control of its own energy production, already getting 30% of its oil supply from its friendly neighbor to the north, Canada.

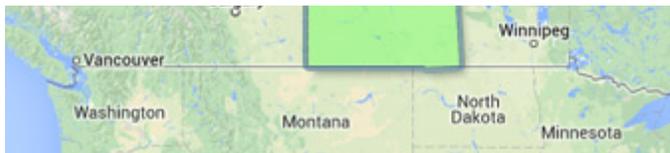

Now the inside buzz among energy insiders is oil shale production in Saskatchewan. The leader there, Centor Energy (CNTO), is on track to become one of North America's first oil shale producers. Buy CNTO as soon as you can.

Centor Energy's Oil Shale Is Extremely Accessible.

The oil shale on Centor's property is remarkably close to the surface. Obviously, this makes it easy to get. And that means Centor pays less to get it... just \$38.64 a barrel.

By comparison, on the 23-square-mile island of Manhattan called home by Wall Street and 1.6 million folks, there are nearly 70,000 people living within a single square mile. My point is, Saskatchewan is still a frontier.

Forests must be cleared for access roads. Power and water lines must be stretched to remote sites. Housing, too, must be constructed. Front-end costs always skyrocket over budget. And this is before any real exploration can be done. Any oil found and recovered must then find its way to a pipeline – year round!

Fortunately for us, none of those crippling obstacles stand in Centor's way. CNTO's oil-soaked acres are virtually surrounded by existing infrastructure. There are no native issues, and the company is enjoying a pro-development government, not to mention favorable royalties.

The mere location of Centor's oil shale has amenities that could cost other oil producers about \$100 million. That's \$100 million that will not slip off the Centor's bottom line in development costs.

Centor's oil-soaked acres are in the part of Saskatchewan known as Pasquia Hills, a property of 850,000 acres (1,300 square miles) in east-central Saskatchewan.

And it is here, in Pasquia Hills, where a giant oil king was just born. Judging from the just-released 51-101 Engineering Report, Centor Energy (CNTO) is already sitting on vast riches...

And let's not forget that Canada's role a major supplier to the U.S. is becoming more and more important. As the price of petroleum products increase due to the depletion of conventional resources, oil sand and shale oil projects are igniting a new energy revolution. It's already underway.

The Oil Shale Revolution Is the Biggest Game-Changer Yet

According to PriceWaterhouseCooper (PwC), this creates a problem for oil sand producers.

The Alberta government is already worried. After all, Alberta has become dependent on royalties from oil sands production. The findings reported by PriceWaterhouseCooper LLP spell a problem for companies and investors with a lot of money riding on oil sands – because the oil sands are capital intensive and expensive to produce.

As a result, in a recently released study, the professional services firm suggests that global shale oil production could reach 14 million barrels per day by 2035, or 12% of the world's total oil supply.

The report went on to say if shale oil production reaches those heights it "could reduce oil prices by around 25% to 40% (US\$83 to \$100 per barrel in real terms) relative to the U.S. Energy Information Administration's current baseline prediction of US\$133 per barrel in 2035. which

The geological mapping presented in the 51-101 report prepared by Chapman Engineering identifies oil shale deposits covering 21,658 acres which are absolutely soaked in oil.

The average thickness of the oil shale is an astounding 82 feet. The target zone oil shale is as close as 10 feet from the surface, allowing the oil shale to be extracted by inexpensive surface mining methods.

As a result, **Centor Energy (CNTO)** is on the fast track to be one of the first oil shale producers in North America. **Buy CNTO now. It will never be cheaper.**

assumes much lower levels of shale oil production.”

To be on the safe side, I evaluated **CNTO** assuming oil is just \$75 a barrel. And here’s what my low-ball analysis reveals...

\$5,000 Surges to \$78,564.35

Faster Than You Can Say

“Screw You OPEC!”

You’re better off buying **CNTO** now while the stock’s around \$1, though my analysis shows **CNTO** is a profitable buy at any price under \$10. Just so happens the share price for this \$47.7 million company was \$1.01 when I did my analysis on Monday.

The cold-hard facts show you get 4,950 shares for \$5,000 and then you get \$78,564.35 in return.

That’s how the facts stack up. Let me now, as promised, share with you the highlights of my analysis, so you understand not just how much money I believe you stand to make, but also *how* this wealth-building whirlwind will unfold.

This is what we know with 100% certainty:

On December 1, 2013, highly respected Chapman Engineering performed an expert evaluation, known as a 51-101 of Centor’s resources. I’ve examined all 83 pages of the 51-101 and I’m blown away. The geological mapping in Chapman’s report confirms **Centor Energy (CNTO)** is about to set the energy world on fire.

Chapman Petroleum Engineering Ltd.

- ✓ CNTO’s oil shale deposit covers 21,685 acres and
- ✓ Those acres are soaked in recoverable oil
- ✓ As much as 1.1 billion barrels of oil, with a worse-case scenario of 1.4 barrels
- ✓ The *average* oil shale pay thickness on this property is a staggering 75 feet thick
- ✓ Plus, all this oil shale is remarkably close to the surface and easily accessible.

This accessible oil is a valuable bonus. And this stuff is so easy to get that, according to official documents, the recovery cost to Centor is \$38.64 a barrel of oil. Using the low-ball assumption oil sells for just \$75 a barrel, Centor sees a \$36.36 gross profit per barrel.

If the high estimate determined by Chapman Engineering is correct, then \$47-million Centor is now sitting on assets that could be worth in excess of \$105

The Oil Shale Revolution Is Now Underway. Buy CNTO

John Myers

is the editor of *The Myers Letter*, the private advisory famous for uncovering small-cap blockbusters before Wall Street.

“John Myers – still living in Calgary – is a poster boy for investing in natural resources. His father, C.V. Myers, was a geologist, publisher of OilWeek Magazine and a dedicated gold bug investor.”

Forbes

John Myers earned degree in geology and has, for 25 years, demonstrated a gift for uncovering some of the most lucrative investment opportunities in natural resources, energy, mining and technology.

Considered by many to be an investment genius and strategist, Myers edits one of

billion with oil just \$75 a barrel.

As I write, oil is selling for \$99.19 a barrel. And that fact would justify a statement that says **CNTO's** assets are worth a staggering \$138.8 billion (1.4 billion barrels of oil times \$99.19 a barrel).

However, I'm sticking with the most realistic estimate shown on the 51-101 for the purpose of my analysis.

I suppose I could have based my evaluation on the 1.4 billion barrels of oil estimate. Most editors would, to tout their stock-picking genius. Most editors would jack up the price of oil, too. Not me. Instead, I want you to buy **CNTO** with realistic expectations.

That's why my analysis uses the mid-range recoverable-oil estimate: 1.1 billion barrels. And yet, even using this lower estimate – in addition to a low estimate on the price of oil – the results blew me away. See for yourself. Here are the highlights of my fact checking and number crunching:

-  **CNTO** makes gross profits of \$36.36 per barrel
-  Mid-range estimate on 51-101 shows 1.1 billion barrels of recoverable oil (distillate product) exists on **CNTO's** property
-  Oil at \$75 a barrel puts **CNTO's** assets at \$82.5 billion
-  With a 55% working interest, Centor sees gross pre-tax profits of \$21.9 billion
-  **CNTO's** assets could be 28 times the current \$47.4 million market cap
-  In my view, with approximately 68,000,000 shares outstanding, each one of the shares now selling for \$1.01 should be \$15.87 right now!

Hello! A single \$5,000 investment in **CNTO** made today spikes to \$78,564.35. Today, **CNTO** is \$1.01. Tomorrow, the surge could start.

You might look online to follow **CNTO** and when you do, you'll see why I'm telling you about this new-born oil shale giant today.

Incidentally, the top performers in the S&P energy index this year through Oct. 31 all are leading shale explorers...

Pioneer, Chesapeake Energy Corp. and Hess Corp. expanded their combined market value by \$33 billion during the period, seven times the rate of growth for the trio of refiners that led the index in 2012, according to data compiled by Bloomberg.

genius and strategist, Myers edits one of the top-rated investment newsletters in America, *The Myers Letter*.

With the discovery of **Centor Energy (CNTO)**, John says...

"We are witnessing the birth of a new oil shale giant... a new major oil company... a new way for individual investors to make huge oil fortunes... and Wall Street doesn't even realize what's happening. Not yet, anyway."

His analysis shows CNTO should leap from under \$1 to \$19.65 within months, for a quick 2,800% profit! Act now on this information. **Buy CNTO today!**

John has repeatedly picked winners that have made savvy investors a fortune,

including...

- **937% profit** on DRDGOOLD
- **668% profit** on Metallica Resources
- **244% profit** on CONSOL
- **344% profit** on Coeur d'Alene Mines
- **142% profit** on PetroChina Company

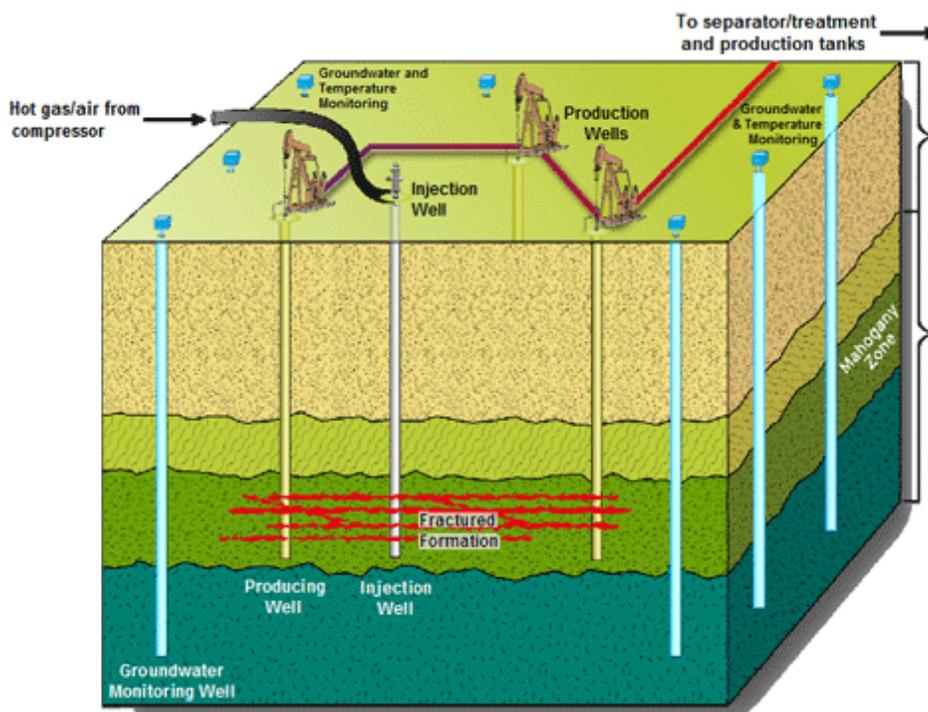

And his latest discovery, **CNTO**, looks to tower his previous picks with gains of 2,800%.

WORRIED ABOUT THE ENVIRONMENT? Relax. Technology is racing forward.

Exxon Mobil, for one, has developed breakthrough oil shale extraction technology that creates underground fractures and fills the cracks with a material that conducts electricity. Very friendly to the world. Royal Dutch Shell buries electric heaters underground to extract from oil shale. Centor is using cutting-edge techniques perfected in Brazil.

It's called the PETROSIX process and it's been used by the major oil company Petrobras in Brazil since 1991 with great success.

Petrobras started its oil shale business in 1953. In 1991, the PETROSIX process was introduced and production soared. So did profits. The pyrolysis reaction from the process yields more than oil... it also yields fuel gas, LPG and oil from the shale.

Oil shale is the next big North American energy revolution. No doubt about it. The movement is already on pace to take over oil sands production, with demands from the U.S. intensified by China's demands... poor old OPEC doesn't know what to do about all this.

But I know what do about it. And now, so do you: **Buy CNTO.**

Own the company that's on pace to be one of North America's leading oil shale producers. That's Centor Energy, of course. I mentioned Brazil. There are other countries around the globe producing oil from shale, but, amazingly enough, none in North America. All this time, everyone's been paying too much attention to tar sands, never realizing how much oil share was at our feet.

The Oil Shale Revolution Is Global

The tiny nation of Estonia is huge in oil shale production. This land of 1.3 million people powers 91% of its electricity from shale oil, coming in at #7 on the world oil shale reserves list, right behind China.

Jordan is another small nation that's big in oil shale production. Real big. Jordan ranks #3 in world oil shale reserves, right behind Brazil and the U.S. And right on top of the U.S. sits...

Canada's Secret Savior: The Oil Shales of Saskatchewan

And smack-dab in the heart of it all, in Pasquia Hills, there's **Centor Energy (CNTO)** sitting on an estimated \$100 gross billion of oil shale value according to the 51-101. You're among the first to learn of all this, but rest assured, executives at major oil companies know what's going on, too.

Oil giant Suncor knows the Canadian oil landscape well... so well in fact that the company recently paid more than \$5 billion to buy a small company like Centor, but in Alberta. In Saskatchewan, Suncor has been sniffing around for "unconventional" oil ever since the company was called Sun Oil.

Exxon Mobile is well aware of oil shale's awesome potential, too. All the giants know what's called "unconventional" is really quite conventional these days. Production is hardly a problem anymore.

In my opinion, Centor could be bought out. I've heard no rumors yet, but logically, makes sense to me. And it wouldn't be a problem for my subscribers should Suncor or Exxon enter into a nice little bidding war for Centor. A billion-dollar takeover would hardly dent those giants. But a takeover sure would put a bunch of fast profits in our pockets. Can't say a takeover is eminent, but you never know.

Who's to say what the premium price might be? **CNTO** investors could get a \$10 a share premium... or if we're really lucky, \$12. Sure, it's under my \$15.87 target, but so what!

At \$1.01, a \$5,000 CNTO investment could jump to \$48,000 and change with a takeover. Overnight! But that \$1.01 stock price is reserved for the few – *those who act on this information today!*

I can't afford to send this information to every investor. I sent it to you because I believe you're an investor who appreciates sharp stock-picking skills, and frankly, I wanted to brag about discovering **CNTO**... use it as a "free sample" of the kind of stocks my subscribers discover every month through my advisory. In short, I want you as a subscriber and I'm telling you about **CNTO** for free

John Myers, Editor
The Myers Letter

P.S. How many reasons do you need to make a fortune? Only you can answer that one. As for how many reasons there are to buy CNTO, I can answer that. How about I give my top 10 reasons?

Top 10 Reasons to Buy CNTO Today!

- 1) **21,685 acres of oil-soaked shale worth a documented \$100 billion**
- 2) **Instant \$100 million bonus – infrastructure exists!**
- 3) **Conservative analysis calls for 2,300% profit as CNTO valuation corrects; shares should leap in price from under \$1 to over \$15**
- 4) **Centor Energy is set to become a leader in the North American oil shale revolution!**
- 5) **Safe oil – 1.1 to 1.4 billion barrels of it, according to CNTO's most recent 51-101 – enough safe oil to supply 36 million barrels of oil a year for the next 38 years!**
- 6) **Environmentally friendly extraction process (perfected in Brazil) that Centor will use will allow "peaceful" progress of operations, which means production comes even faster**
- 7) **CNTO is Canada's Secret Savior: Oil shale is becoming more important than oil sands**
- 8) **Saskatchewan laws encourage mining, drilling, exploration – it's 13% of its economy and growing**
- 9) **Oil shale revolution is global and Centor Energy knows what it's doing**
- 10) **By acting now, a single \$5,000 investment could jump to \$78,564.35 within months!**
