Claim Your Share of \$400 Million in Natural Gas... For Just Pennies on the Dollar

This unknown energy company – with assets in a region loaded with natural gas – could give you up to \$8 per share worth of assets... yet it's selling for just 65 cents

BREAKING NEWS

– On January 28 – just days after this report was produced – it was announced that an “estimated gross total reserves of 47 billion cubic feet (BCF) of natural gas” were found to be within the property of **Great East Energy Inc. (OTCBB: GASE.)**

The geologist who prepared this analysis – released as part of an official 51-101 Report – concluded that there are 25 billion cubic feet of Proven Reserves and an additional 22 billion feet of Probable Reserves.

This analysis shows that the potential for **Great East Energy Inc. (OTCBB: GASE)** is even greater than it was at the time this report was prepared. Instead of sitting on an estimated \$8 per share worth of natural gas...Great East Energy Inc. may now be sitting on closer to \$9 per share worth of gas in the ground!

Why Great East Energy, Inc. (OTCBB: GASE) Could

Help You Triple Your Money in 12 Months

Fellow Investor,

This one could move *quickly*.

One little-known oil & gas exploration company – at this very minute – could be sitting on an absolute fortune.

Estimates have shown that **Great East Energy, Inc. (OTCBB: GASE)** right now has a potential 45 billion cubic feet of gas in the ground.

That's a staggering amount of natural gas...worth more than \$400 million at today's prices.

But here's the thing.

Unlike other energy exploration plays, this company isn't "hoping to produce" at some point in the future.

Instead...**Great East Energy, Inc. (OTCBB: GASE)** is already producing.

In fact...the company has already produced nearly one billion cubic feet of gas since inception.

And the story gets *even better*.

As it turns out – thanks to a unique price anomaly – Great East Energy, Inc. (OTCBB: GASE) is able to sell its natural gas for as much as THREE TIMES the price gas is currently selling for in the United States.

I urge you to take a few moments to read this special briefing to learn how you can claim a potential \$8 per share worth of assets for as little as 65 cents.

Let me show you what I mean...

Two Independent "Confirmations" of Great East Energy's Outstanding Property and Explosive Profit Potential

The very first thing I look at when evaluating any natural gas play is the company's property.

Simply put, if there's not convincing evidence that the company has gas in the ground...I'll quickly look elsewhere.

With **Great East Energy, Inc. (OTCBB: GASE)** – you can stake your claim in a property that has an estimated 45 billion cubic feet (BCF) of natural

Action to Take Now on Great East Energy

Buy Price: **\$0.65**
6mo Target: **\$3.00**

Recommendation

Strong buy – begin your due diligence into this opportunity immediately

gas in the ground.

So right away you know you're dealing with the **potential for a huge energy play.**

But here's what makes the opportunity for profit potential so great with **Great East Energy, Inc. (OTCBB: GASE):**

"Ukraine is believed to have some of the largest shale gas reserves in Europe. New technology means they are more easily recoverable."

The company's outstanding property has been "confirmed" by two impeccable sources.

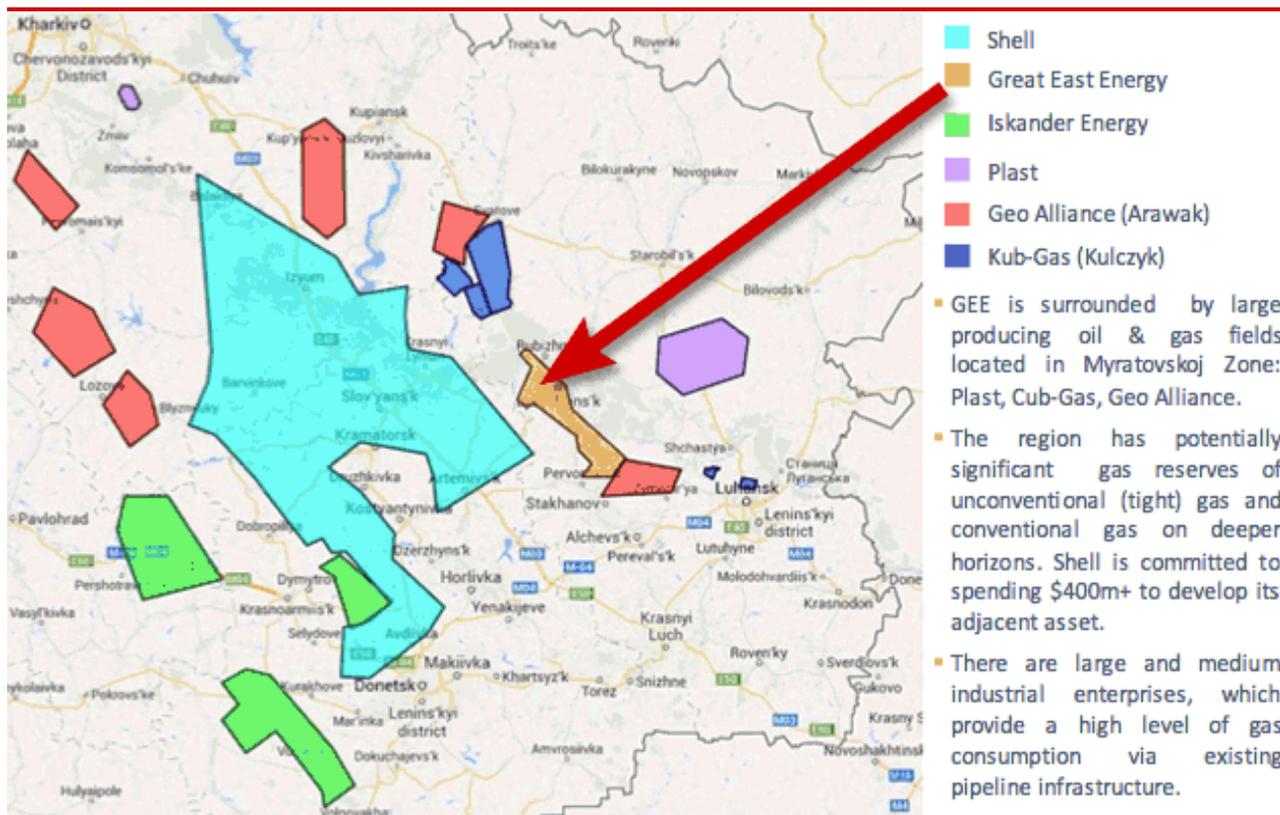

First, Marathon Oil – the \$15 billion giant U.S.-based natural gas company – conducted its own analysis of the very property **Great East Energy, Inc.** owns just a few years ago.

At the time, Marathon Oil estimated the properties to have up to 45 billion cubic feet worth of natural gas.

And the second "confirmation" of Great East Energy Inc.'s potential came just recently...when Royal Dutch Shell announced it was investing \$400 million to develop its own property adjacent to Great East Energy Inc.'s property.

GEE's Asset is Surrounded by Large Producing and Prospective Blocks

In fact, Great East Energy, Inc.'s flagship property is surrounded by large producing oil and gas fields, including Plast, Cub Energy and Geo-Alliance.

*Just how valuable is **Great East Energy Inc.'s** property in the "New Bakken"?*

Houston-based Cub Energy just recently paid \$25 million for raw land – without permits or production – roughly half the size of **Great East Energy Inc.'s** property.

Sitting in the middle of Middle Europe's "New Bakken" and surrounded by large producers – including Shell's \$400 million investment – **Great East Energy, Inc. (OTCBB: GASE)** looks to be perfectly positioned to possibly deliver triple-digit profit potential.

But **Great East Energy Inc.'s** property is just part of what makes this opportunity so unique...

Great East Energy Inc. (OTCBB: GASE) Is Already Producing – and Delivering – Natural Gas

Not only does **Great East Energy Inc. (OTCBB: GASE)** have a potentially lucrative property right in the middle of the "New Bakken"...

The company is already producing – and delivering – natural gas.

That's what makes this opportunity unlike other exploration plays...where you're hoping that "some day" a company turns from "hopeful" into "producer."

One of Great East Energy Inc.'s Already Producing Gas Processing Facilities

That's already happened with **Great East Energy, Inc. (OTCBB: GASE.)**

The company has already produced nearly one billion cubic feet of natural gas since inception in 2003.

And **Great East Energy, Inc. (OTCBB: GASE)** is currently producing roughly \$250,000 per year in revenue – from just two of its eight wells – and delivering directly to nearby customers via its own 8.3 mile pipeline.

Great East Energy, Inc. has two gas processing facilities in place – each with a capacity to produce

350 million cubic feet of gas per month...and its existing pipeline allows the company to bypass the middle man in delivering to customers near the property.

Here's what's so important to remember about **Great East Energy Inc. (OTCBB: GASE)** – and what makes this opportunity so unique:

This company – unlike others you read about in the exploration arena – has been producing gas on the property via its own processing plants for over a decade.

And as I'll show you in a just a minute – the pace of production could soon rise dramatically.

But before I get to that, I need to tell you...

Why Great East Energy, Inc. (OTCBB: GASE) Won't Remain Undervalued Much Longer

After investigating the prospects for **Great East Energy, Inc. (OTCBB: GASE)** I can

only draw one conclusion: the company appears to be significantly undervalued.

But I don't expect it to stay that way for long – and here's why:

As of this writing, you can buy shares of the company's stock for around 65 cents.

Back in 2007, Marathon Oil conducted a detailed analysis of the property now owned by **Great East Energy, Inc.** and estimated that the property contained 45 BCF of natural gas in the ground.

Based on that estimate, the company's resources could be worth – at today's prices – around \$400 million.

With roughly 50 million shares of stock outstanding – we're talking about **\$8-per-share worth of natural gas in the ground.**

And a company that's already producing.

But let's be super-conservative for a moment and run the numbers on another scenario.

If somehow Marathon Oil's analysis of the property's resources was too optimistic...and that there are only 75 BCF in the ground. That's still \$4-per-share of gas in the ground for a 65-cent stock!

You can see why I suspect that shares of **Great East Energy, Inc. (OTCBB: GASE)** could soar quickly higher once word begins to spread about the amount of gas this company has in the ground.

That's why my Urgent Recommendation for you – right now – is to begin your due diligence and explore buying shares of **Great East Energy, Inc. (OTCBB: GASE)** immediately.

But before you do – I must tell you about a unique anomaly that could actually triple the profit potential for **Great East Energy, Inc...**

Profit Tripler: Natural Gas Prices in Middle Europe are Three Times USA Levels

Here in the United States, we've come to take natural gas for granted.

After all – with natural gas so plentiful in our country. U.S.-based companies are now

5 Reasons Why Great East Energy (OTCBB: GASE) Could Deliver Explosive Returns

#1 – Great Property

– **Great East Energy, Inc. (OTCBB: GASE)** is sitting on an estimated potential \$400 million worth of natural gas right now. Do the math – that's nearly \$8 per share worth of natural gas alone...yet you can buy shares today for just 65 cents.

#2 – A History of Production

– Great East Energy, Inc. is a producing company – in fact, the company has already produced nearly one billion cubic feet of gas since inception. We're not talking about a company searching...they're already producing – and sitting on a large amount of gas. This is not a developmental play – this is a producer!

#3 – Potential Profit-Tripling Price Anomaly

– There's a price anomaly at play right now that could triple the profit potential. Natural gas in Middle Europe is selling for \$12/mcf – that's THREE TIMES the price here in the U.S. This means huge profit potential, as it costs just \$4/mcf to pull the gas from the ground.

#4 – Modern Technology and Western Know-How

– By bringing modern, Western technology to Ukrainian fields production can take off. Using primitive Soviet-style drilling techniques in Ukraine, many

scrambling to become exporters.

But with that kind of supply...you also get a lower price.

That, however, is NOT the case in an area of Middle Europe like Ukraine.

In fact, natural gas prices in Middle Europe and Ukraine are roughly triple the current U.S. prices – hovering around \$12 to \$15 per mcf.

This means the profit potential for **Great East Energy, Inc. (OTCBB: GASE)** could be up to as much as three times as great.

At the moment, **Great East Energy, Inc. (OTCBB: GASE)** can pull gas from the ground at around \$4 per mcf...

producing wells on the property were abandoned after a short period of time...but Great East Energy, Inc. can use its superior technology and methodology to quickly and easily bring those wells back on-line as producers.

#5 – Location, Location, Location

– Want confirmation that **Great East Energy, Inc. (OTCBB: GASE)** is operating in a potentially lucrative region? Royal Dutch Shell just “wagered” \$400 million to develop the property right next door. And producing oil and gas fields already surround Great East Energy, Inc.’s property.

But with gas prices of \$12 to \$15 per mcf in Middle Europe and Ukraine – and with ongoing strong demand – the company is looking at **exceptionally high potential profit margins.**

And demand will continue to be high for one simple reason: No matter what happens in the long term with the Middle European and Ukrainian geopolitical situations...the energy is still badly needed.

Regardless of whether Ukraine remains under Russian control or if the country distances itself from Vladimir Putin – people still need to heat their homes and businesses.

The New York Times⁴

“Ukraine pays exceptionally high prices for natural gas, making the economics of shale gas extraction even more attractive for (Western) companies.”

And **Great East Energy, Inc. (OTCBB: GASE)**

– a current producing gas company – is sitting on an enormous potential energy source that will remain valuable in any environment.

I strongly recommend that you begin your research today into **Great East Energy, Inc. (OTCBB: GASE)** before you miss out on what could be one of the best energy investment opportunities in decades.

Stake Your Claim in the “New Bakken” Today

The Bakken Oil Field – located in Western North Dakota, Eastern Montana and Saskatchewan – will go down in history as one of the largest recoverable energy discoveries in history.

Estimates have put the discovery at 7.4 billion barrels of recoverable oil¹ – and some geologists say those estimates may be low.

Over the last five years, activity in the Bakken has been rampant – with companies jostling to best position themselves for maximum energy profits.

But now...there’s a “New Bakken” – located in Middle Europe – with astounding energy potential.

It’s known as the Dnieper-Donets Basin – and it’s located in eastern Ukraine, near the Russian border.

With an estimated potential of up to 300 trillion cubic feet of natural gas², this “New Bakken” has attracted a great deal of activity...including a long-term, \$10 billion commitment from Royal Dutch Shell³.

Great East Energy, Inc. (OTCBB: GASE) was already producing – and distributing – natural gas in this “New Bakken” well before Shell announced their investment...in a property right next to Great East Energy, Inc.

Here’s another reason why I feel so strongly about this company’s potential...

Great East Energy, Inc. (OTCBB: GASE) Brings North American Know-How and Technology to a Resource-Rich “Frontier” Property

The potential for staggering production numbers at Great East Energy Inc.’s properties is very real.

That's because **Great East Energy, Inc. (OTCBB: GASE)** brings something to this extraordinary property in the "New Bakken" that has never been introduced on this site: **North American know-how and technology.**

Think about it – this is a historically producing property...that up until very recently has only been explored with extremely harsh, outdated, Soviet-style drilling techniques.

Now along comes **Great East Energy, Inc. (OTCBB: GASE)** with a "road map" of what has been drilled before using primitive techniques and inferior equipment. That means wells that may have produced for a short time but were then abandoned...could now be quickly turned back online and brought up to speed.

And instead of taking six months to drill a well...**Great East Energy, Inc. (OTCBB: GASE)** brings in the technology to drill in just six days.

By bringing modern, Western technology to these Ukrainian fields, production could potentially take off like a rocket.

And the men in charge of assembling this technology and know-how bring a vast array of international energy finance experience to the table...

Superior Leadership: Great East Energy, Inc. is Guided By Decades of Experience

One of the reasons I'm most excited about the prospects for **Great East Energy, Inc. (OTCBB: GASE)** is its leadership.

Great East Energy, Inc. is led by an international management team with extensive finance and energy experience in tight gas, coal-bed methane and shale gas...and they have experience in Ukraine, Canada and the United States.

New CEO Timur Khromaev brings over 15 years of managerial, financial and corporate finance experience to the company.

Mr. Khromaev is an advisor at ARTA, a leading Ukrainian investment company with a significant presence in the Middle European energy sector.

Prior to co-founding ARTA in 2002, Mr. Khromaev was Deputy Chairman of the Board at both TAS-Invest Bank and NRB-Ukraine. Mr. Khromaev has also held top ranking positions at the Ministry of Finance of Ukraine including the post of the Head of Capital Markets Development Department

THE WALL STREET JOURNAL

"The former Soviet republic (Ukraine) depends on Russia for its natural gas, but is hoping drilling techniques pioneered in the U.S. will help it unlock its own resources."

Chairman Michael Doron – based in Stockholm, Sweden -- is an experienced entrepreneur, investor, international business leader, and independent board member, who previously served as the CEO of GASE.

He currently serves as the Chairman of Next Graphite, Inc., and is an independent member of the Board of Directors at MusclePharm Corp., where he chairs its Governance and Nomination Committees and serves as a member of the Audit Committee. He was previously Managing Partner at DDR & Associates, a business development firm specializing in pre-IPO companies, and as a Co-Founder and Partner in Evolution Capital, specializing in providing capital to publicly held companies.

Recommendation

Strong buy – begin your due diligence into this opportunity immediately

Urgent Recommendation: Take Action Now on Great East Energy, Inc. (OTCBB: GASE)

As I said at the very beginning of this report, **Great East Energy, Inc. (OTCBB: GASE)** has the potential to move very quickly.

So my recommendation to you – right now – is to immediately begin your research into this potentially explosive production opportunity before it's too late.

Here's why...

- **Great East Energy, Inc. (OTCBB: GASE)** is perfectly positioned – right in the middle of Middle Europe's "New Bakken" ...
- The company is sitting on a staggering amount of natural gas – worth a potential \$400 million at today's prices...
- That works out to as much as \$8-per-share of gas in the ground for a company whose stock is now selling for around just 65 cents...
- Other major producers have acquired property all around Great East Energy, Inc. in Ukraine – and Royal Dutch Shell alone has committed a whopping \$400 million to develop the property right next door...
- On top of all that, Great East Energy, Inc.'s modern technology and Western know-how could translate into a rapid spike in production...
- And this all comes at a time when natural gas prices in Middle Europe and Ukraine are three times as high as here in the United States.

FINANCIAL TIMES ⁷

"For other countries, notably Poland, Ukraine and Lithuania, indigenous shale gas is a prize worth pursuing."

Great East Energy

Region has potentially significant reserves of oil, conventional gas and unconventional (tight) gas and CBM. Shell, Chevron, ExxonMobil and Eni. have signed development agreements with Ukraine.

Simply put, we're talking about a company with a history of production – sitting on a potential fortune worth of natural gas – in a resource-rich area where other companies are racing to get in the game.

Great East Energy, Inc. (OTCBB: GASE) Has the Potential to Join My "All-Time Best" Energy-Producing Investments

I've been researching potentially explosive profit opportunities – and bringing the "best of the best" to my readers – with great success ever since my very first day in the business.

And right now, I'm convinced that **Great East Energy, Inc. (OTCBB: GASE)** has the potential to join my list of all-time winning trades.

That's a list that includes winners like... Bloggerwave (BLGW)—405% gain in just 55 days
