

From the Desk of Tobin Smith...

SPECIAL REPORT ALERT:
I'm recommending **ENCR** as a **Strong Buy** to profit from a massive new \$110 billion megatrend

HAVE YOU MISSED THE AMAZING 30-TO-1 MARKET BEATING STEALTH Super Sector of 2014?

Stocks from This ONE Sector are UP 884% on AVERAGE In the Last 12–18 months...

It's NOT Too Late to Score MORE Monster Profits:

Why Ener-Core, Inc. (ENCR) Looks Like the Next Mega-Winner

12 key reasons

why investing in
Ener-Core (ENCR)
NOW could become the most
profitable move you'll make in 2014!

Why You Missed this 30-to-1 Market Beating Super Sector?

How the Smart Money Earned 884% AVERAGE Returns over Last 12–18 Months

Why ENCR is the Next Big Thing in Tech Stocks 2014

Ener-Core (ENCR) is an immediate buy! Get in around \$1 and you could turn your \$10,000 into \$30,000 in the next 12 months! See details inside!

Dear Opportunistic Investor,

Tobin Smith here...editor of Next Big Thing Investor PRO...your Saturday morning friend for 14 years on Fox News's #1 rated business TV show "Bulls & Bears"...and I'm talking to you today about runaway, unabashed \$millionaire making "stealth" bull market happening in front of your very own eyes.

Specifically, I'm talking about a very select *hidden niche* of low priced emerging growth stocks...up a staggering 884% on AVERAGE since 2013-2014...beating the S&P 500 return by more than 30-to-1 in the same time period...

...and I bet you never noticed them or your broker never called!

**Don't Wait For This Story To Break...
This is an Immediate Buy Now Situation!**

Stock Symbol: **ENCR**

Tobin Smith

Tobin Smith is one of the most widely followed stock pickers in America because he delivers what investors want: enormous

Buy Price: **\$1**
 Near Target: **\$3.00**
 Take-Out Value: **\$6.50-\$8**
 Strategy: **Buy and hold**

Here is the proof of my Stealth Super Sector research - 884% Average Returns over last 12-18 Months

He delivers what investors want: enormous profits!

A founding member of InvestorPlace Media LLC, one of the world's largest investment research publishers, and founder of the ground breaking ChangeWave Research organization, Tobin Smith specializes in identifying emerging growth stocks long before they are discovered by Wall Street and the public.

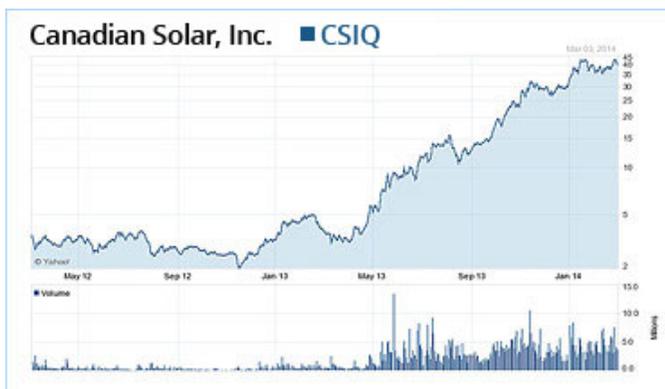

For fourteen years, Smith was an exclusive contributor and market analyst for Fox News and more recently guest anchor for Fox Business Network's *America's Nightly Scoreboard* and *Power & Money* primetime programs. He is the author of the *New York Times* bestsellers *ChangeWave Investing*, *ChangeWave Investing 2.0* and *Billion Dollar Green*, which debuted on Amazon as a #1 bestseller.

To learn more about Tobin Smith's special investment opportunities, see the special offer at the end of this report.

Your eyes don't lie...but they may BLINK...

Up as much as 4,765% in last 52 weeks

No one would touch these stocks 18 months ago...they were "dead and buried" according to most "experts." Yet...

**\$10,000 in PLUG one year ago would be
as much as \$476,500 today...**

**... \$10k turned into
\$120,000 in JKS
in less than 18 months.**

These are but a few of the many examples of what I have come to call the "30X stealth bull market"—30 times the return of the overall bull market for technology stocks in 2013 (as measured by the Nasdaq Composite).

What is this Secret 30X Market Beating Sector... ...and Why Haven't You Heard of It?

I call this largely hidden sector of recent millionaire making stocks "Industrial Cleantech."

These stocks are NOT sexy.

They are, however, proven millionaire making emerging growth stocks.

These are the kind of clean technology companies that own unique patented/patent-pending technology that allow companies of all sizes—global giants to local factories—INCREASE their profit margins by making or distributing their products/services for LESS ENERGY COST than conventional technologies.

How much less? A LOT less—hundreds of billions of dollars in "cash money" savings that go right to the bottom-line.

In short these winning companies have built a better mouse-trap that (via patents) others can't copy. Even better these are the kinds of technologies that profit-margin padding/cost-cutting obsessed companies all over the world CAN'T resist.

Believe Me - I Know the Industrial Cleantech Space

I wrote in detail about most of these companies in 2009 within my #1 Amazon bestselling book "Billion Dollar Green: Profit from The Eco Revolution."

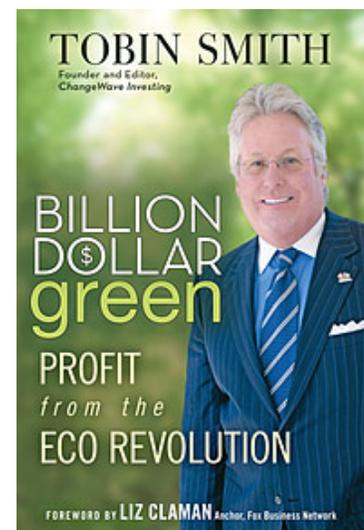

I spent a full chapter on this coming Industrial Cleantech trend over a decade ago in my NY Times bestseller "ChangeWave Investing 2.0" way back in 2002.

I have been a published and acknowledged authority on the Industrial Cleantech world for more than a decade...I know this space like few other analysts.

And please understand this—I use the term "Eco Revolution" NOT refer to "ecology" or "environment" per se—I'll leave those terms to the tree-huggers not interested in capitalism nor profit.

I use the term "ECO" to refer to far less abstract concept—economic return—as in technology that offers superior cost benefit economics and return on capital invested (ROI) over existing technology.

Until superior economics—not hype-driven hysteria—made

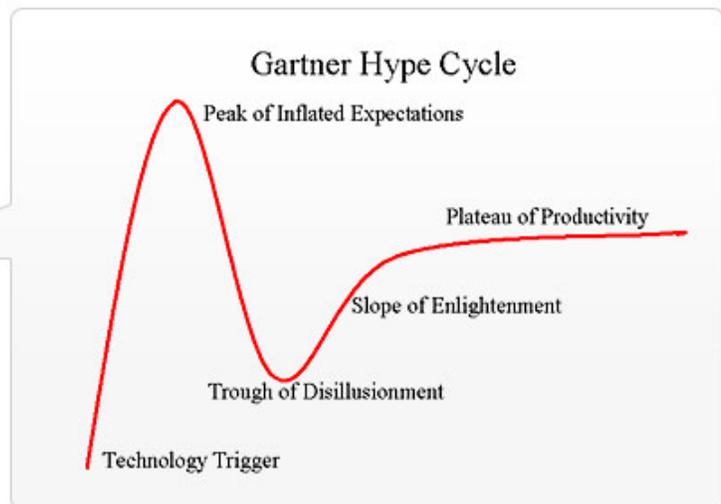

clean technology solutions better business decisions for REAL business people (not hippy dippy Al Gore disciples) these stocks were emotion driven speculations.

Let's Fast Forward to 2014

What's driving these astronomic price moves NOW—what I dreamed about happening someday in 2009—is that many of these Industrial Cleantech energy technologies became LOWER cost alternatives to fossil fuels WITHOUT artificial economics—read unsustainable government subsidies and tax credits.

I knew that until these companies got past the technology "Hype-Cycle" made famous by legendary technology research firm Gartner Group, these stocks were destined to shoot to the moon on hype and fall to the ground on disillusioned reality—what Gartner calls the "trough of disillusionment."

Jackie Fenn and Mark Raskino wrote about the KEY to making big money in technology in their legendary book Mastering the Hype Cycle: "You have to choose the RIGHT innovation at the RIGHT TIME to profit from technology innovation."

So why do I think you will make so much money from these Industrial Cleantech stocks now?

Because NOW is the right time to profit from the right Industrial Cleantech technology.

2009 was too early—we were still in the hype phase.

In 2014, we are in the massive wealth making phase—and it's time for YOU to participate in the wealth making frenzy and get into the game before it's too late.

Why You Haven't Heard of the Amazing Wealth Being Created TODAY for “Industrial Cleantech” Shareholders

These Industrial Cleantech stocks are mostly small microcap companies with ZERO coverage from Wall Street. They don't need a lot of equity capital raised to make billions of dollars in profits and capital gains for their shareholders.

In short, if Wall Street can't profit from it, they don't cover it...you never hear about them.

Here is my NBT Index of Industrial Cleantech stocks...and the cumulative wealth created over the last 12–18 months **is a staggering 9,725%—an 884% average return...from their 2012 or 2013 lows—amazing.**

Industrial Clean Tech stocks are **THE Hottest Fortune Building Stocks** in the World Today!

Symbol	12-18 month Low	Recent High	Percentage
PLUG	\$0.15	\$10.82	4,764%
BLDP	\$0.76	\$5.89	325%

CREG	\$0.83	\$2.97	257%
Cumulative Return			9,725%

Source: Yahoo Finance

You HAVE heard about this guy and this company, right?

I am man enough to say that Elon Musk IS one of my business idols.

And it's a fact: The Elon and Tesla revolution have sorta "sucked all the air out of the room" when it comes to the media covering clean technology OUTSIDE of Muskland and Tesla.

Just Google "Elon Musk" and then Google "Industrial Cleantech" and you will see what I mean.

This Tesla Automotive chart says it all.

But now it's time for NEW innovative leadership to take over.

OK Toby—What's Your NEXT Monster Super Sector Stock Pick?

Without question in the last 12–18 months industrial clean technology stocks HAVE reached that hallowed land of economic superiority and breathtaking stock market profits...and one of the

NEXT big winner in these fortune making stocks...

Why?

Because electric power runs the world...and 60% of the cost of producing the world's electrical power comes from...energy costs!

Because ENCR owns the patented technology that allows hundreds of billions of dollars of previously wasted energy to create trillions of dollars of electrical power around the world.

Because it's hard to compete in the global \$5 trillion electrical power production game against...FREE.

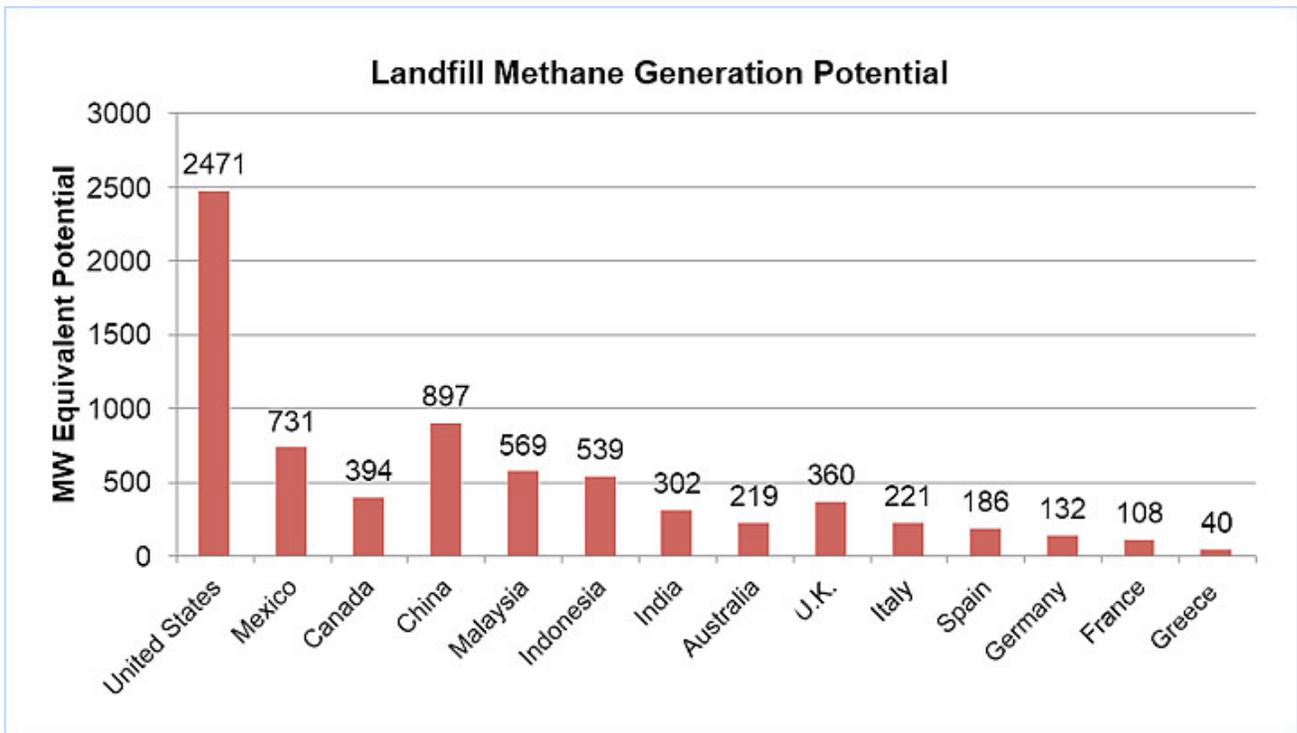

ENCR's breakthrough technology enables the world's largest turbine manufacturers to suddenly expand their annual potential turbine market sales by ANOTHER \$110 BILLION per year. (source: ENCR presentation and analyst estimates.)

ENCR's stunning, magic-like technology turns hundreds of billions of dollars of waste energy from agriculture, oil and gas production, coal mining, landfills and waste water recycling into FREE electric power that can be sold or used at very high returns on invested capital.

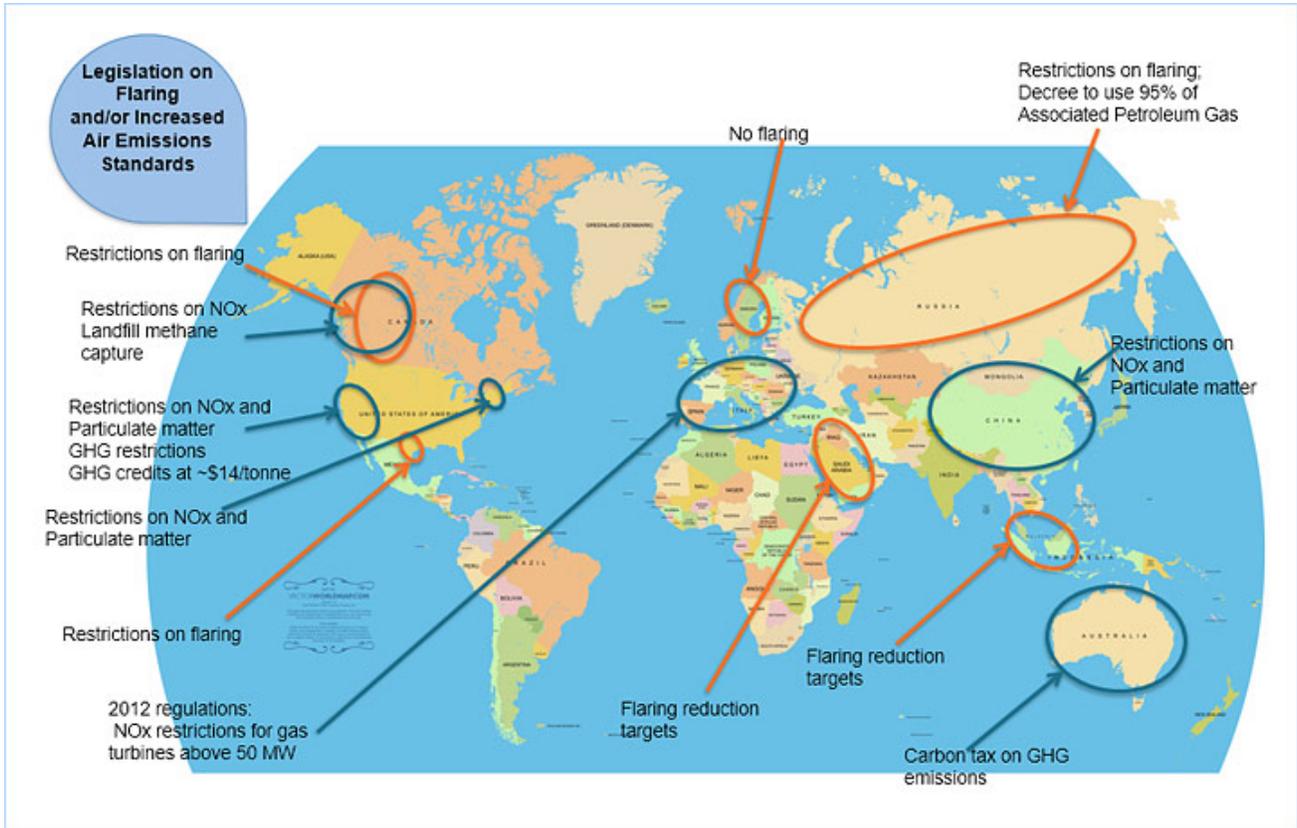

Can you imagine just how big this free energy-to-high profit power production business will become around the world?

The Enormous NEW \$110 Billion Annual Market For ENCR Technology

\$56 billion in new addressable annual revenues from the Landfill & Water Treatment Biogas facility market

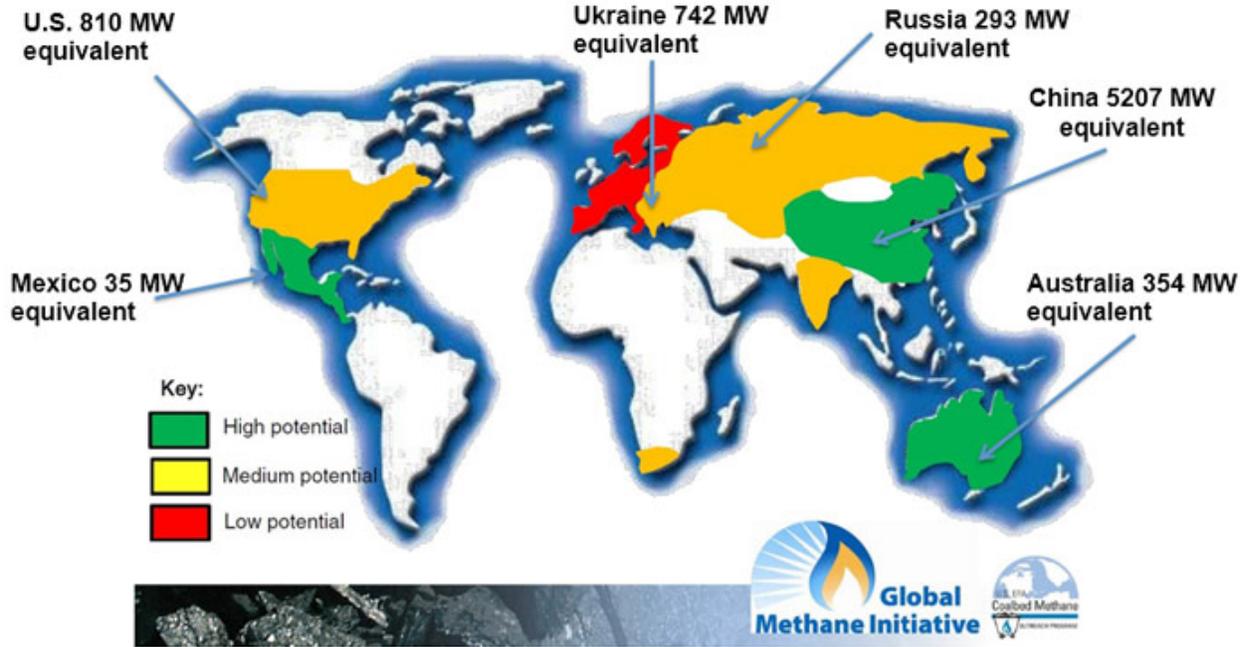

\$36 Billion in new annual sales into Global Tight/Tightening Emission Control Regions

\$21 billion in new annual turbine sales to Coal Methane markets

Ventilation Air Methane is an Immediate Opportunity

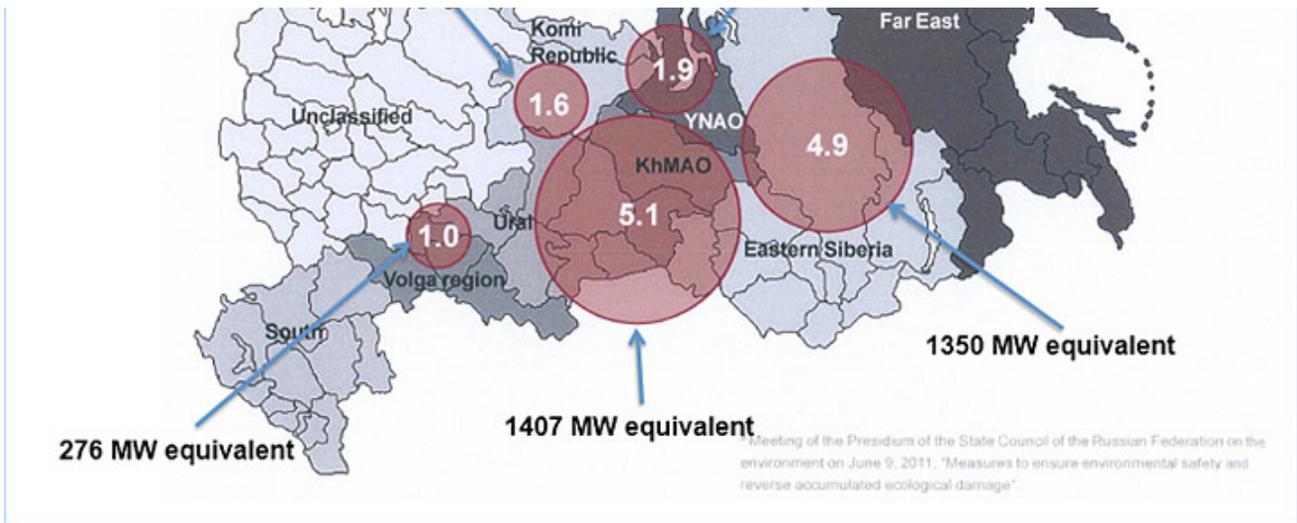

\$16 billion in new annual power producing turbine sales to Oil Field Waste Gas markets

Waste Gas in Oil Fields is an Immediate Opportunity (Russia example)

Fig. 5: Geographic distribution of main APG flaring volumes (bcm)

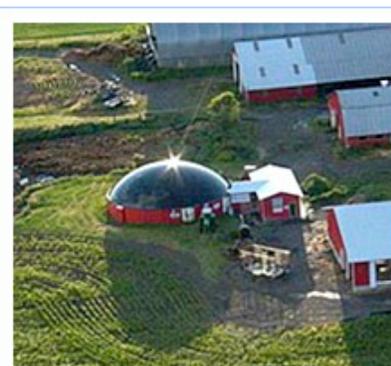

Total? >\$110 billion in NEW sales opportunities

every year to sell and install turbines run on ENCR technology around the world.

ORGANIC SOURCES

**LANDFILLS****WASTE-WATER TREATMENT PLANTS****AGRICULTURAL DIGESTERS****MINERAL SOURCES****COAL MINES****OIL & GAS**

So now you ask...

How much **WASTED** energy is available to **Ener-Core (ENCR)** in just the United States alone for conversion to electrical power via turbines with their technology?

An incomprehensible amount...is the truth.

First...how much power do we Americans consume every year?

A lot. We make up less than 5 percent of the world's population yet consume 26 percent of the world's energy.

Currently, the world's population consumes @ 15 terawatts or 15 trillion watts of power from a combination of energy sources.

That's nearly 4 terawatts of power consumed per year for the United States.

4 TRILLION watts of power—incomprehensible.

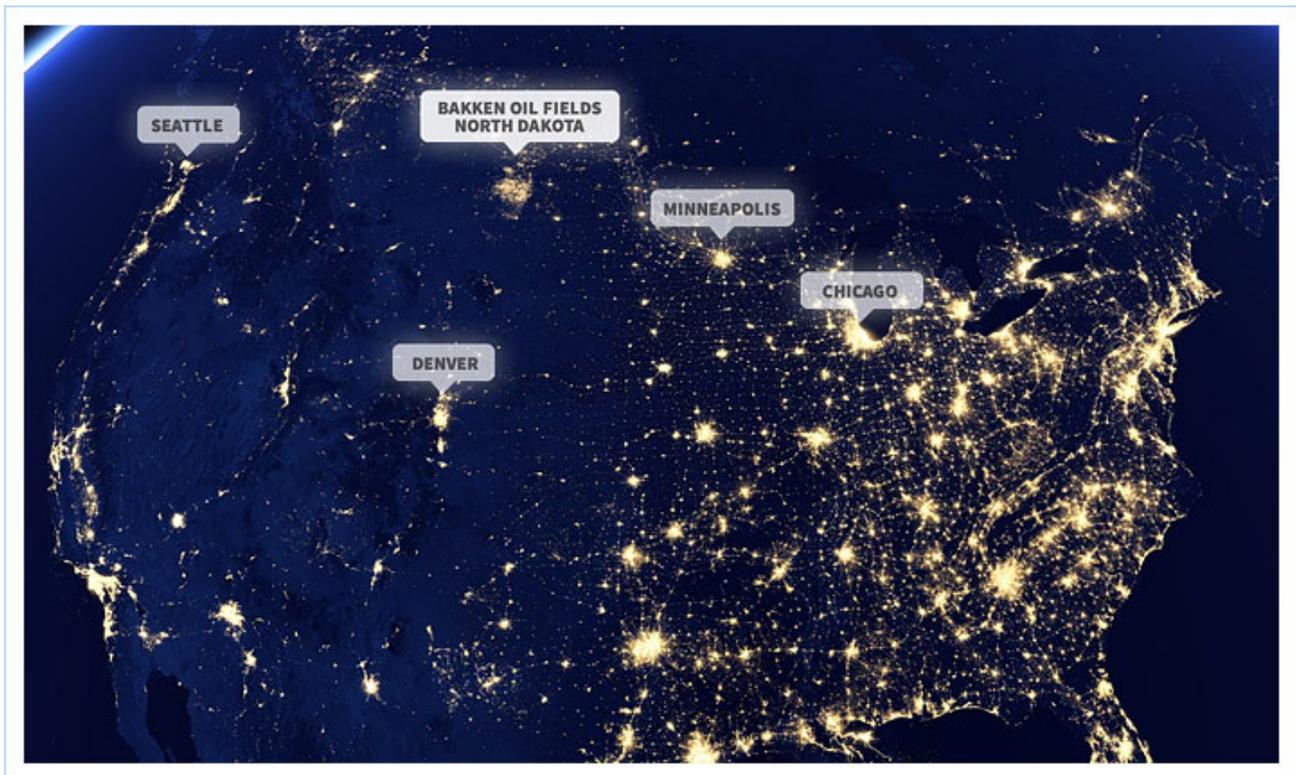

Research group EnergyVison estimates that every year, U.S. households, institutions, factories, and farms throw away so much garbage, yard trimmings, crop residues, and other organic wastes that, if turned into a source of energy, it could power almost every urban truck and bus fleet in the nation.

The problem is it all goes into a landfill and the organic gas that comes out is too low in energy to be used by conventional gas turbine technology.

IHS Consultants and NBT Research estimate that from just from oil and gas production and coal mining (i.e. flaring low grade unusable/unmarketable methane gas) there are 250 gigawatts of electrical power WASTED every year in the United States alone—enough power for @50 million homes!

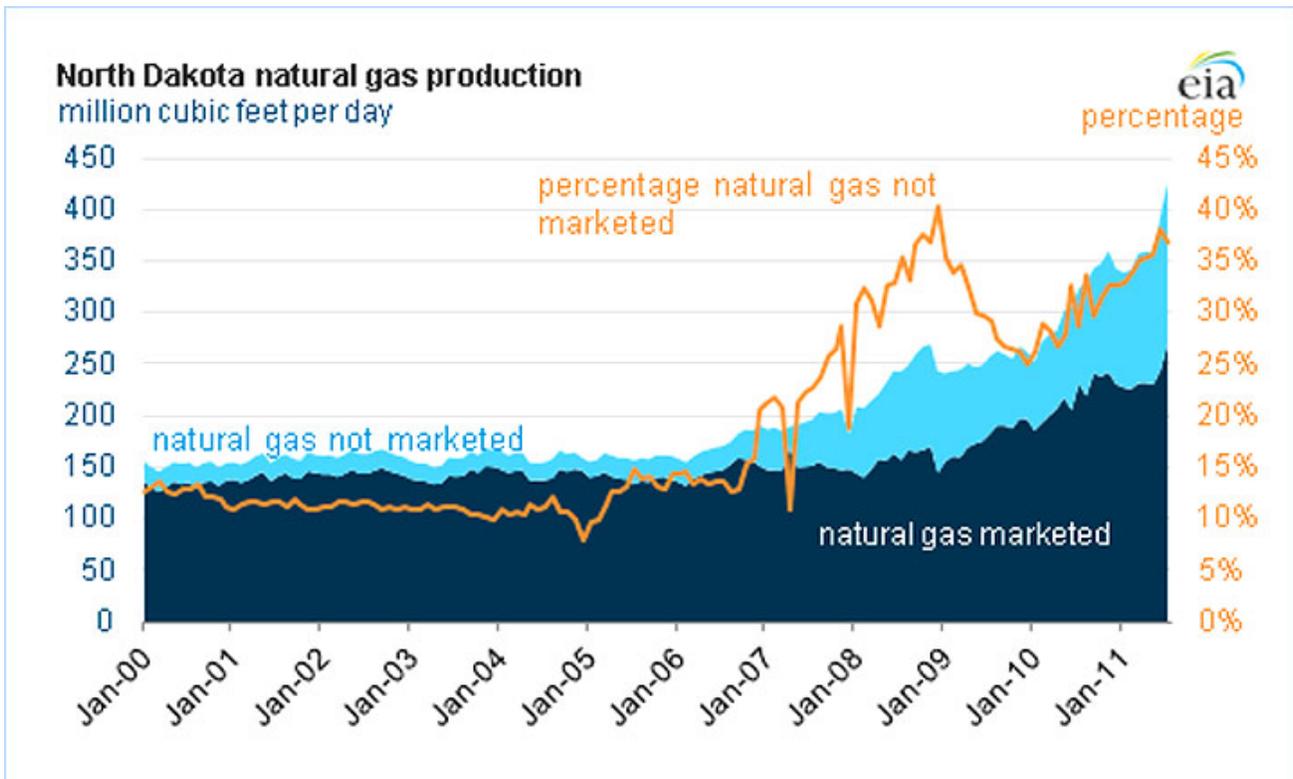

According to the EPA, the U.S. alone has

- 3,019 active landfills and over 10,000 municipal landfills with methane gas flaring
- 5,500 water treatment facilities
- 52 active coal bed methane mines
- \$16 billion in annual flared gas

View of Natural Gas Flaring from Space

In fact, over 1/3 of ALL natural gas produced in North Dakota Bakken fields is flared or not marketed or used for energy (source eia.gov).

KEY POINT: We waste a MASSIVE amount of energy every year because before ENCR technology there was NO economic way to convert low grade methane gas energy into electrical power.

How Do We Save The Insane BILLIONS of dollars of Energy Resources We Throw Away Every Year?

Answer: Billions of dollars of Ener-Core Powered Turbines!

Industry and equity analysts believe there aren't ANY competitors even close to empowering low-BTU waste gas feedstock like ENCR. (source: equity research reports)

In fact, one Ener-Core analyst recently reported, *"Importantly, we do not believe there are any incumbent technologies that can utilize low-BTU feedstock anywhere near the ENCR technology."*

Of course this removes the age old "cutthroat pricing" competitive response we would assume to see from the established industry giants looking to squash an uppity upstart (source: published analyst reports).

Best news? Since fuel costs comprise up to 60% of power generation costs...and the most of the gas that powers ENCR empowered turbines is basically FREE...it's hard to compete with....FREE!

In short—ENCR technology produces an economic and environmental miracle:

A proven & patented way for companies to destroy and convert environmentally hazardous gas into a very attractive economic return from electric power... AT THE SAME TIME!

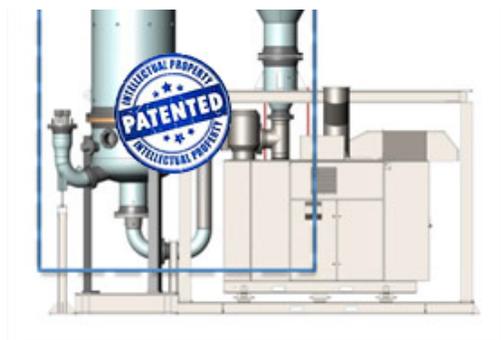

The Technology

Their unique patented technology enables turbines to
 Generate power from previously unusable, low-energy content waste with a high economic return
 Produce materially lower toxic waste gas emissions into the air vs. conventional turbines for emission restricted/controlled

regions/states/countries

Again—for the \$multi-billion a year turbine industry this is a miracle as well: \$110 billion+ in new business opportunities each year that previous to ENCR they couldn't touch...because they had NO viable solution for low energy gas feedstocks!

The Lock-Tight Patent Protection

ENCR owns ALL the patents to protect this energy recovery miracle...developed over years under its old parent company.

Now the world's largest conventional turbine manufacturers have to come to ENCR if they want to compete for business in this massive new power generation opportunity.

The Simple Investment Case for Ener-Core (ENCR): \$2.50 to \$3.00 over the Next 12 Months

I discovered this company from one of the only investment banks that covers smaller industrial clean technology companies.

These analysts (who are top drawer in the clean tech world) published an Ener-Core (ENCR)12-month price target of \$2.50 in the beginning of 2014.

But I truly think their target price is too conservative in the short term—\$3 is reasonable given that the company is OUT of its proof-of-concept stage and ramping up revenues in 2014 with a hockey-stick type sales ramp in 2015.

ENCR and the other stocks I call "Industrial Clean Tech"

This Just IN: A \$500 Million Order Just Announced With ENCR's Current Turbine Partner FlexEnergy for Off-the-Grid Turbine Power

FlexEnergy, former parent company of ENCR and a microturbine manufacturer spun off from the industrial equipment conglomerate Ingersoll Rand, landed a landmark sales deal in February with a venture-backed investment group based in Russia, the Distributed Generating Company (DGC).

Based in the Russia's industrial Samara region, DGC agreed to pay [FlexEnergy](#) nearly \$500 million for 200 megawatts of microturbine generating capacity over the next three years.

"The basic plan is to use the microturbines as a platform for developing a set of standardized solutions for quick deployment, and offer customers long-term, predictable contracts, for on-site power generation, with no grid connection fees," said Dennis Shomko, a partner at Avicon-UK who

are the hottest stock movers in the last 12 months...by far. Faster than the Biotech boomers...hotter than social media or cloud technology stocks.

ENCR is right in the middle of the world's HOTTEST stock sector and yet is STILL under most investor's radar...this is why I wanted to rush this urgent report out to you ASAP!

As this 30X-to-1 market beating super stock sector gets discovered...there is no telling how high the new players like ENCR will run.

**And really...
with 884% AVERAGE returns
over the last two years...
how long do you think this
monster stock category is
going to STAY under the Wall
Street radar?**

Wall Street LOVES to play the same theme over and over—"the next Tesla"...the "next Plug Power".

Well...I and other analysts see a hockey-stick like revenue ramp for ENCR in 2015 and beyond as multi-billion dollar turbine manufacturing sales and distribution teams jump on the bandwagon with the ONLY game in town—ENCR.

My bet is that kind of visibility will put ENCR in the Wall Street spotlight and the NEXT big play in molten hot industrial cleantech stocks.

My Best Guess: the Inevitable Take-Out Play Will Come Sooner than Later...

At SOME point I believe it's inevitable that ONE of the billion dollars big turbine manufacturers is absolutely going to want the \$110 billion ENCR market for themselves: why would they want to share this giant

represents DGC, during an international project finance conference held in New York City by Broad Street Capital. Source: Forbes

The opportunity for "off-the-grid" reliable and low-cost power production is virtually endless. This \$500 million order is just the veritable "tip of the iceberg" for these types of applications. With Ener-Core technology, FlexEnergy will be able to go after thousands of factory and institutional locations which have low-energy virtually free gas and need reliable and cheap power.

As Electricity Costs Soar, Energy-Hungry Firms Have a Growing Incentive to Go Off the Grid

March 2, 2014 — Every sixth company in Europe's largest economy now generates its own electricity, roughly 50% more than one year ago, according to Germany's Chamber of Commerce and Industry. They range from rural family-owned companies to a vast [Dow Chemical](#) Co. plant that consumes 1% of the country's electricity.

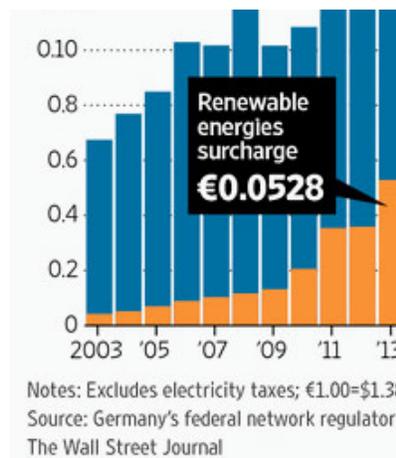

The reason? Ever-higher electricity prices—driven in part by a 22% government-mandated levy to fund renewable-energy sources—are prompting companies large and small to invest in their own power-generation infrastructure. Doing so not only shields them from the government surcharge, but also makes them eligible for subsidies designed to encourage energy efficiency and so-called green electricity.

Michael Salcher, head of the energy and natural resources practice at consultancy KPMG in Germany, estimates that companies that avoid the surcharge and receive subsidies can cut their electricity bills by around 50%. (source: WSJ)

themselves. Why would they want to share this giant market with their mortal enemies and competitors?

A take-out preemptive play on ENCR would be called a "strategic" acquisition—an ENCR should find itself in play with the billion dollars big boys of the global turbine industry!

The Management Team: Ready to Lead ENCR to Victory

We judge this ENCR team world-class and highly qualified to take ENCR to the next level.

Alain Castro
Chief Executive Officer

London Business School: Sloan Fellowship, Executive Master's Degree, Business and Management; University of Texas, B.S., Industrial and Mechanical Engineering

Alain is the Chief Executive Officer of Ener-Core, Inc. He has spent the vast majority of his career developing, financing and building new power generation plants, as well as optimizing older energy infrastructure assets across many countries throughout Europe, Latin America and North America.

In addition to his role with Ener-Core, Alain is currently an executive advisor to one of the largest global manufacturers of utility-scale wind turbines, as well as a member of the advisory board of Global Energy Innovations, a leading provider of diagnostics solutions for the utility-scale energy storage and standby power sectors.

Boris Maslov
President

Moscow Institute of Physics and Technology: Ph.D., Electrical Engineering; B.S., M.S., Electrical Engineering and Computer Science

Boris is the President of Ener-Core, Inc. He was previously the Vice President of Corporate Development at FlexEnergy where he led Strategic Planning, Technology Development, and Intellectual Property Protection.

Boris holds CEO experience at Energy One, a renewable energy project development company. He has served as CEO of several technology and financial companies, as well as CTO of WaveCrest Laboratories, a manufacturing company specializing in electric transportation markets.

Kelly Anderson
Chief Financial Officer

California State University, Fullerton: B.A., College of Business and Economics

Kelly is the Chief Financial Officer of Ener-Core, Inc., and a certified public accountant with over 15 years of corporate finance, accounting and senior management experience. She has operated in senior finance positions in large, Fortune 500 company environments, as well as publicly traded microcap companies, and was instrumental in raising over \$30 million in her last role within the clean tech space.

Previously, Kelly was the President and Chief Financial Officer of T3 Motion, Inc., an electric vehicle technology company. Prior to that, she served as T3's Executive Vice President, Chief Financial Officer, and director.

Douglas Hamrin
Vice President, Thermal Oxidizer Engineering

Massachusetts Institute of Technology: M.S. Mechanical Engineering; Illinois

Steve Lampe
Vice President, Electrical and Controls Engineering

University of Missouri — Rolla: M.S., Mechanical Engineering

The Hon. Dr. Stephen L. Johnson,
Board Member

11th Administrator, United States Environmental Protection Agency

M.S., Mechanical Engineering, MITRE
Institute of Technology, B.S., Mechanical
Engineering

Doug Hamrin is the VP of Thermal Oxidizer Engineering at Ener-Core, Inc., and is responsible for the technical development of the oxidizer at Ener-Core. He has filed 17 patents on Ener-Core Technology over the past 4 years, during which he served as Director of Thermal Oxidizer Development at FlexEnergy.

Mechanical Engineering

Steve Lampe is the VP of Electrical and Controls Engineering at Ener-Core, Inc., managing the controls and operation development of the Ener-Core Powerstation™. He has filed 9 patents on Ener-Core technology over the past 4 years, during which he served as Director of Controls at FlexEnergy.

Steve is highly experienced in advanced gas turbine technology and controls, and was formerly the Director of Oil and Gas Applications for Capstone Turbine Corporation. Steve holds 14 additional patents in the area of turbo-machinery controls.

Environmental Protection Agency (2005–2009), where he controlled a \$7.7 billion annual budget and managed over 17,000 employees. Worked at EPA from 1979–2009, and became the first career EPA employee to hold the position of Administrator and the first scientist to head the Agency. He received the White House's Presidential Rank Award, the highest award for civilian federal employees.

12 STRONG REASONS TO BUILD Your ENCR Position **Immediately**

The \$500 Million+ Investment Case for the Ener-Core Technology **Miracle in Your Growth Portfolio Today:**

- 1 Industrial CleanTech stocks are white hot**—our index of industrial clean tech stocks is up a staggering cumulative **9,725% in the last 12–18 months**—beating the S&P 500 Index return by over 30x-to-1. (source: NBT Research and FactSet)
- 2 Our NBT Industrial lean tech index has outperformed the 2014 market by over 12-to-1** since Jan 2, 2014. (source: FactSet Research)
- 3 Our initial 12-month \$3 target is a triple from <\$1 buy price**—and key industry analysts agree with us.
- 4 This is truly a game-changing technology** for electrical power generated from free and previously unusable energy feedstock—in a world starved for affordable and politically correct power. (source: Analyst reports)
- 5 ENCR expands the addressable market for land-based turbines >\$110 billion worldwide** in both low-energy waste fuels and stringent emission standards vs. conventional combustion-style gas turbines. (source: ENCR presentation)

presentation)

- 6** **Up to 60%** of the cost of global power production comes from fuel costs... and ENCR systems running on waste gas **have virtually ZERO energy costs**. (source: Energy Institute and analyst reports)
- 7** **No existing competitors are present in this technology space**—to earn a part of the \$110 billion in new markets opened to the major turbine players they **HAVE** to work with ENCR. (source: the company and analyst reports)
- 8** **ENCR proprietary technology is heavily patented and protected**—if one of the billion dollars turbine manufacturers could do this on their own—they would have done it already. They can't...and even better they **KNOW** they can't. (source: SEC filings and analyst reports)
- 9** To reach the \$110 billion in new markets ENCR empowers, the major turbine players **HAVE** to **partner with ENCR or BUY them—we will take either!**
- 10** ENCR is in the early stages of commercialization—they recently shipped their first order to a major Netherlands landfill operator. ENCR is in the process of developing a new 10X larger 2MW system with turbine OEM Dresser Rand. **The risky period for proof of concept and technology is over...NOW** it's time to bring home the orders.
- 11** **The Management Team is World Class**—with ENCR you are betting on the horse **AND** the Jockey!
- 12** You are investing alongside long-time institutional clean tech private equity investors **SAIL Capital Partners...**with \$25 million invested in ENCR and board seats. If ENCR is good enough for one of the most experienced industrial Cleantech investors in America...it should be good enough for small investors, too.

This is the wealth-making formula of 2014: find technology stocks that turn free, cheap or renewable energy into high-profit electric power.

Buy them before the rest of the world discovers them.

And ride these Industrial Cleantech stocks to life-changing wealth.

Of course you need to do **YOUR** due diligence right now on the **ENCR** opportunity and get ready to contact your broker.

But unknown and I believe hugely undervalued ENCR shares look primed to repeat the life-changing stock gains we have seen from other Industrial Cleantech stocks as it hits Wall Street's radar.

Best Wishes,

Tobin Smith,
Editor Next Big Thing Investor PRO

"Thanks for the add Tobin. Discovered CREE thanks to you and appreciate the 317% return. Keep up the good work."

— **J Rodgers, Ridley Park, PA**

"MEMC from \$15 to \$75—not only was that a great call...what impressed me most was how you guys found this company ahead of ALL the Wall Street know-it-alls! I'm a subscriber for life now!"

— **J Wolf, Bridgeport, CT**

"Toby...I can honestly say you have been the source of truly transformational wealth to my family. Getting us out of stocks in 2001...back in 2003...and then ringing the bell on the oncoming Great Recession saved my family millions—God bless you!"

— **T Haney, Garland, TX**

ENCR

with Apple and Google has changed my life...made things possible for my family and I that I frankly never dreamed of...LOVE the new NBT Investor PRO...keep it up!"

— **B Simpson, Coral Gables, FL**

"When I look at my portfolio, I realize what an enormous impact you have had on my life... and for that I thank you from the bottom of my heart. I am sooo excited by the future. How do I find your new recommendations?"

— **H Katz, Round Lake, IL**

"Toby...we named the 56 foot yacht we bought with our profits from your research "El Cambio" ...The Change. Thank you from the bottom of my heart for all that you have brought into our lives."

— **Steve E., Cave Creek, AZ**

"When I first read your report on how Apple was changing the music world with iTunes... I bought shares for my IRA around \$35. When I read your report on how they were changing mobile phones, I bought shares for my children's accounts around \$75. After taking profits at your \$650 target price all I can say is "WOW—my retirement is secure and my kids' college is paid for. God bless you man... what a difference in all our lives."

— **C Lowe, Santa Monica, CA**

Homes, second homes, yachts, college educations and MOST important secure retirements—that's what we wake up every day to try to deliver to our members.

To ALL the hundreds of thousands of past subscribers—and millions who have watched me on Fox News over the years...

PS: New massive Methane Emission Control MANDATES from President Obama just created an ADDITIONAL \$50-\$100 billion market for ENCR...time is now of the essence to start a position BEFORE Wall Street figures out who is the BIG winner from this groundbreaking new law!

IMPORTANT NOTICE AND DISCLAIMER: This paid email advertisement by Tobin Smith and NBT Group, Inc. (hereafter "NBT") does not purport to provide an analysis of any company's financial position, operations, or prospects and this is not to be construed as a recommendation by NBT, or an offer to sell or solicitation to buy or sell any security. NBT has received forty thousand dollars for this and related marketing materials from Alliance Financial Media Inc. (hereafter "AFM"). AFM has agreed to pay one million dollars for the dissemination of this information to enhance public awareness for Ener-Core, Inc. (hereafter "ENCR"), the company featured in this issue, and appears as paid advertising. Although the information contained in this advertisement is believed to be reliable, NBT makes no warranties as to the accuracy of any of the content herein and accepts no liability for how readers may choose to utilize it. The information contained herein is based exclusively on information generally available to the public and does not contain any material, non-public information. Readers should perform their own due-diligence before investing in any security including consulting with a qualified investment advisor or analyst. Readers should independently verify all statements made in this advertisement and perform extensive due-diligence on this or any other advertised company. NBT also expects to receive new subscriber revenue; the amount is unknown at this time, as is a result of this advertising effort. NBT (nor any of their principals, officers, directors, partners, agents, or affiliates), do not represent themselves to be, registered investment advisors, brokers, or dealers in securities. NBT is not offering securities for sale. An offer to buy or sell can be made only with accompanying disclosure documents and only in the states and provinces for which they are approved. Research and any due diligence have been conducted by an outside researcher for this advertisement. More information can be received from ENCR's website at www.ener-core.com. Further, specific financial information, filings and disclosures as well as general investor information about publicly listed companies and other investor resources can be found at the Securities and Exchange Commission website at www.sec.gov and www.finra.org. Any investment should be made only after consulting with a qualified investment advisor and only after reviewing the financial statements and other pertinent corporate information about the company. Many states have established rules requiring the approval of a security by a state security administrator. Check with www.nasaa.org or call your state security administrator to determine whether a particular security is licensed for sale in your state. This advertisement is not intended for readers in any jurisdiction where it is not permissible under local regulations and investors in those jurisdictions should disregard it. Investing in securities is highly speculative and carries a great deal of risk, which may result in investors losing all of their invested capital. Past performance does not guarantee future results. The information contained herein contains "forward-looking" statements and information within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934, including statements regarding expected continual growth of the featured company. "Forward-looking" statements are based upon expectations, estimates and projections at the time the statements are made and involve risks and expectations that may differ from those anticipated. "Forward-looking" statements may be identified through the use of words such as expects, will, anticipates, estimates, believes, or by statements indicating certain actions may, could, should, or might occur. Any statements that express or involve predictions, expectations, beliefs, plans, projections, objectives, goals or future events or performance may be "forward-looking" statements. In accordance with the safe harbor provisions of the Private Securities Litigation Reform Act of 1995, the publisher notes that statements contained herein that look forward in time, which include other than historical information, involve risks and expectations that may affect the company's actual results of operations. Factors that could cause actual results to differ include, but are not limited to, the size and growth of the market for the company's products and services, regulatory approvals, the company's ability to fund its capital requirements in the near term and the long term, pricing pressures and other risks detailed in the company's reports filed with the Securities and Exchange Commission.
