

# THE MOSKOWITZ REPORT

Helping people with their financial health

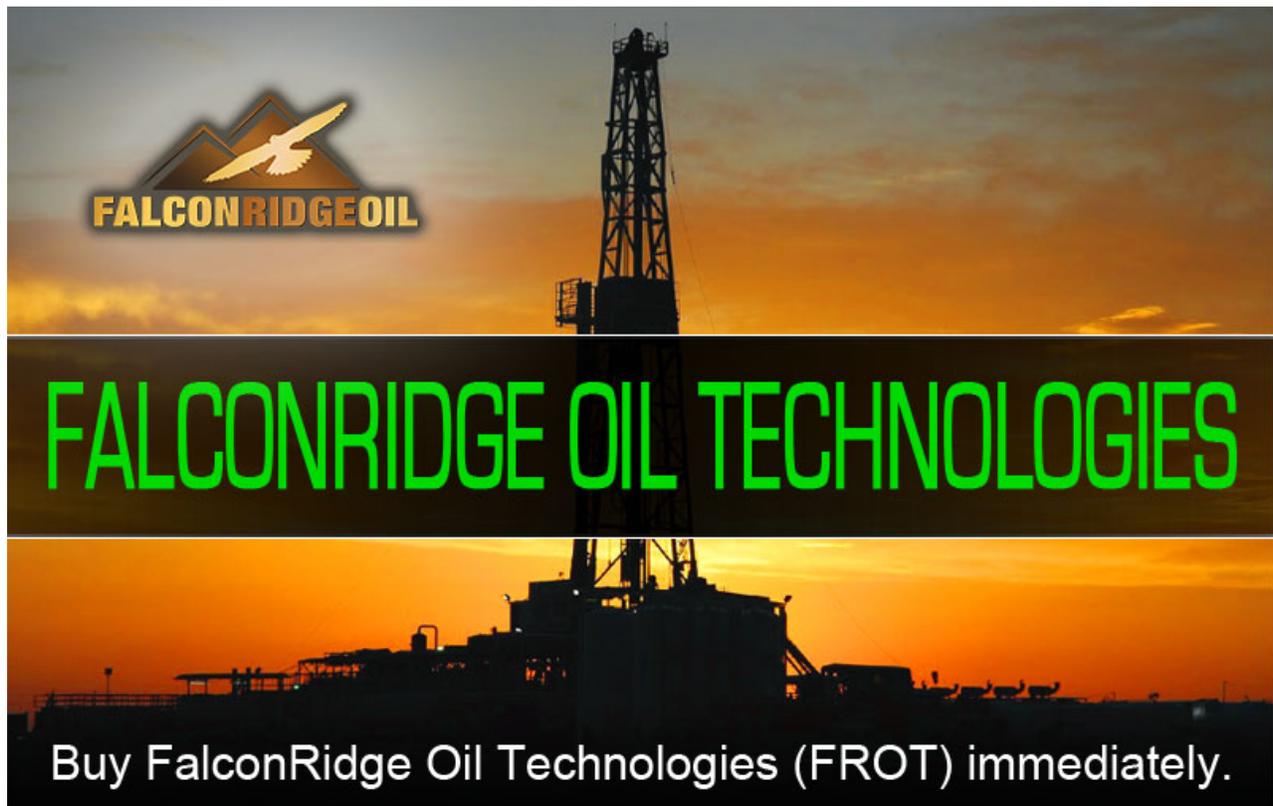

OCTOBER 2014

**BREAKING NEWS!** Billions of barrels of new oil about to pump up America

The Oil Boom Is Getting Louder, The Profits Are Getting Bigger, And...

## One Tiny Upstart Holds the Key to the Entire Future of America's Oil Boom!

**FALCONRIDGE OIL TECHNOLOGIES**

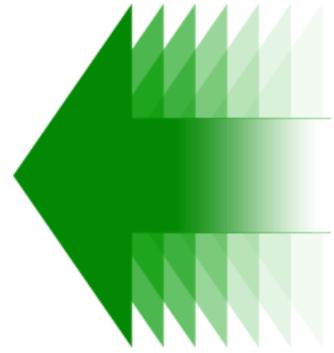

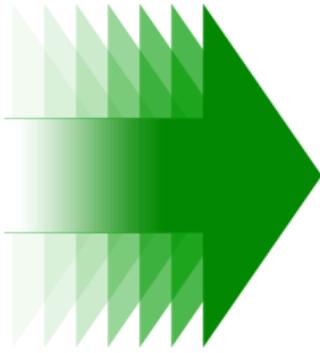

Buy FalconRidge Oil Technologies (FROT) immediately.

400% Profit Surge Ahead -- \$1 Stock Ready to Rocket to \$5

### YOU'RE AMONG THE FIRST TO LEARN OF THIS.

And that means you're among the first to get in on what could be the most profitable stock any boom has ever created... the profit surge might

not stop until an oil giant buys out this company

Fellow Profit Seeker,

I've never been this excited as an investor before. I just discovered a little upstart named **FalconRidge Oil Technologies** and now I know for sure that...

**AMERICA'S OIL BOOM IS ABOUT TO BOOM LOUDER THAN ANYONE EXPECTS**

and a select group of investors are already getting in line to become filthy rich. That select group of investors is made up of those who grasp and act on what I'm revealing to you here.

WHAT TO DO NOW FOR 400% PROFIT

**First Priority**

Buy FROT

**Company Name**

FalconRidge Oil Technologies

**Industry**

Energy Oil & Gas

**Ideal Buy Price**

Under \$2.00

**Initial Target**

\$5.00

First, let me give you some basic facts about FalconRidge (**FROT**).

This unknown company is a natural-born blockbuster. It's a takeover target right out of the gate because it has the worldwide marketing rights to the patented breakthrough well-completion technology that's proven<sup>5</sup> to produce more oil and gas than any other method (including fracking) and it's proven to extend the economic life of almost every well ever drilled. That totals...

**More Than 25 Million Wells!**

It's called "Terra Slicing Technology" or "TST" and it's the future of America's Oil Boom... and every other oil and gas boom making noise around the world.

PROVEN RESULTS

**Terra slicing technology works.** It's not a whacky pie-in-the-sky concept some dreamer thinks might work. It's already working! And **FalconRidge Oil Technology has exclusive commercial rights!** Savvy investors

## **EXCLUSIVE MARKETING RIGHTS TO TST-3!**

As you are about to discover, every exploration company finding new oil will soon be knocking on the doors of FalconRidge... every oil and giant, including BP, Exxon, Shell, now producing around the world will be busting down the door to buy the company... every early investor who learns of this company and buys its stock (**FROT**) is expecting triple-digit profits fast. For good reason!

**FalconRidge has the commercial rights on the patented 3<sup>rd</sup> generation terra slicing technology (TST-3). This is a bona-fide breakthrough!**

As you read this, FalconRidge is bringing abandoned wells back to life, able to take a non-performing asset and restore capacity to the well of 60-80% of its original flow rate<sup>2</sup>. This astounding capability is one reason oil companies should be eager to do business with the company. The other reasons are likely to shock you.

# **Profit Now Off the Future of America's Oil Boom**

From here on out, oil companies looking to the future will have FalconRidge Oil Technologies in clear sight. FalconRidge has the worldwide rights to market what the company calls TST-3... third generation terra slicing technology.

Terra slicing was invented and first used back in the early 1970s. But that first-generation version had unexpected limitations... it worked, but the tool itself was getting damaged and had to be replaced all the time<sup>3</sup>. The second-generation advancements took care of most of the problems, except TST-2 could only be used on vertical wells. It had some other limitations, too.

## **TST-3 Is the Game Changer!**

**Now we have the future!**

TST-3 produces more oil and gas than any other well-completion technology in existence, including the technology that put America on the oil-producing map, fracking. It works gangbusters in almost every kind of well ever drilled... vertically, horizontally, onshore and offshore.

What I'm about to reveal is such big news, I hardly know where to begin telling you why you must buy **FROT** today. So, how about we jump to the bottom line first...

know what to do.

**Buy FROT**

Proof of the dramatic increase in production by using Terra Slice Tech. is clearly provided for oil company executives on the [company website](#).

# Bottom Line

**BUY FROT TODAY** and your profit surges might never stop, until FalconRidge is bought out by the likes of Exxon, BP, or anyone of the other majors.

**FalconRidge, is the energy industry's new golden goose...  
new gift horse... new great hope for the future.**

**FROT** is the greatest new hope for investors, too. Best I've ever seen. This tiny unknown, from what I see, is a natural-born blockbuster. The information you're getting here could be worth a fortune to you.

By acting today, a single \$5,000 investment in **FROT** is all it takes to build a meaningful position. Sweet! Sweeter still, I wouldn't be one bit surprised to hear your \$5,000 rapidly surges to \$15,000. Perhaps within a few short months.

If I'm right, you're up \$10,000 in weeks and suddenly a potential bidding war between billion-dollar oil giants erupts. When was the last time a single stock turned \$5,000 into \$50,000 for you? **FROT** could be the first!

Of course, I could be wrong about FalconRidge.

Frankly, I could be *underestimating* this stock's potential. After all, this is a company with a market cap that's less than \$45 million. Reaching \$100 million could be quite easy. The company's market is gigantic, rolling in money, and dying to get their hands on TST-3 technology.

**Since FalconRidge holds the commercial rights to market this patented breakthrough technology, oil and gas companies have no choice but to do business with FalconRidge. Billions upon billions of dollars are at stake.**

I've thought it out and FalconRidge is actually in control of the future of big oil... and America's Oil Boom.

Fracking is being banned all over the world<sup>4</sup>... they will have no choice but to use this technology!!!

With that in mind, it becomes difficult to grasp the stock's complete profit potential. Could a single \$5,000 **FROT** buy today hand you in excess of \$100,000 in, say, 24 months? I can't see a ceiling. But hold on... let's get our heads out of the clouds for a moment and see how early investors could make such a windfall.

**FALCONRIDGE OIL**

**FalconRidge suddenly finds itself in control of big oil! Because:**

**#1**

**Extends Well Life...**

Every oil company in the world needs TST-3's remarkable ability to **extends well production of almost every oil and gas well ever drilled... vertical, horizontal, onshore and offshore.**

**#2**

**Safe Alternative to Fracking...**

FalconRidge's TST-3 is **bigger than fracking...** it's the only oil and gas production breakthrough since fracking first opened up America's oil supply.

**#3**

**Multiplies Well Production...**

TST-3 can more than double or triple production of methods now used **including fracking** to get resources from rock in many cases.

# MILLIONS OF BARRELS OF FRESH NEW OIL WITHOUT DRILLING NEW WELLS

Every oil and gas company with a well (dead or alive) could soon be pumping fees and royalties directly to FalconRidge, in ever-increasing amounts. That could change, of course, should FalconRidge be gobbled up by one of the giants.

## **FalconRidge (FROT)** **Makes Money No Matter What!**

**FalconRidge collects a fee for the use of its patented TST-3, a fee oil companies will gladly pay because this new technology works like gangbusters!**

It's already proven to revive old wells<sup>5</sup>. Flows snap back fast, too, from 60% to 80% of their original flows. Plus, in addition to the usage fee, FalconRidge collects royalties on all the new oil that's recovered. That could be billions of barrels!

FalconRidge, essentially, risks nothing. It's like they're selling axes and shovels during the 1849 Gold Rush, making a profit whether or not prospectors hit pay dirt.

Only this is the 21<sup>st</sup> Century and we're 7 years into the Great American Oil and Gas Boom. From 2008 to 2013, domestic oil production surged a mighty 64% and U.S. natural gas production soared 42%<sup>6</sup>. It's been an exciting time, especially for savvy investors... especially my loyal readers.

America's two largest oil plays, the Bakken Formation up north and the Eagle Ford Formation in Texas, have showered my loyal readers with profits you might like, too.

### **Bakken Profits**

**1,078% profits** from Rosetta Resources (\$4.06 to \$47.82)

**3,258% profits** from Brigham Exploration (\$1.14 to \$37.15)

**1,473% profits** from Northern Oil & Gas (\$2.22 to \$32.69)

### **Eagle Ford Profits**

**468% profits** from Carrizo Oil & Gas (\$8.42 to \$47.87)

**1,500% profits** from Magnum Hunter Resources (\$0.55 to \$24.10)

**210% profits** from Matador Resources (\$7.76 to \$24.10)

The Boom has empowered America. Some of us are on the mountain tops singing, "*Pound sand, OPEC! We don't need your oil so much anymore.*" But not everyone is singing. Environmentalists are outraged because of the method used to get America's oil and gas, fracking. That's hardly a secret. But this might surprise you...

# **The Dirtiest Oil Boom Secret No One's Even Talking About**

## Production From Fracked Wells Fades Fast! As Much As 75% in the First Year!

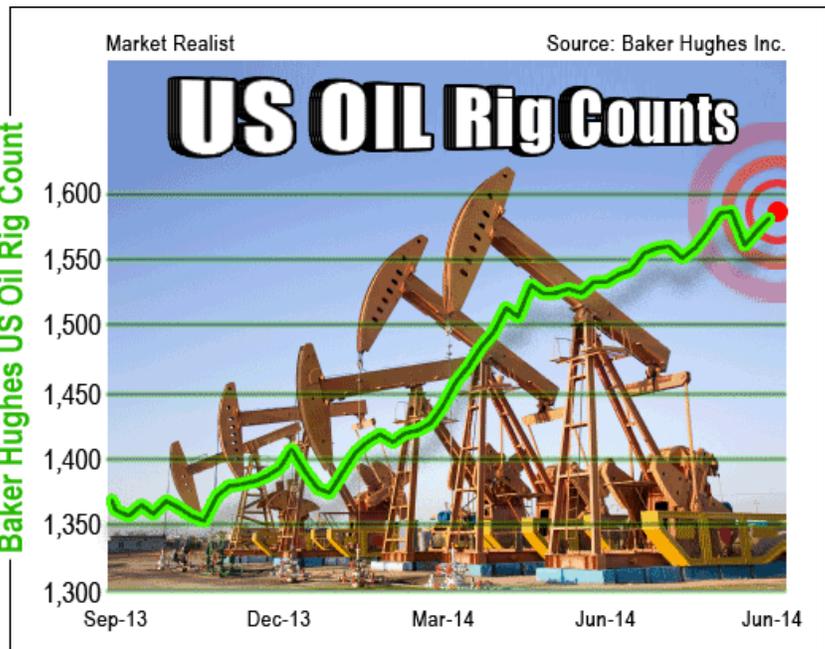

Without FalconRidge, America's Oil Boom is in big trouble... trouble hardly anyone is even talking about outside the oil and gas industries... **trouble FalconRidge can solve.** Here's a glimpse of the problem<sup>7</sup>:

- ➔ Chesapeake Energy's Serenity oil well in Oklahoma came in as a gusher producing more than 1,200 barrels a day in 2009. Just four years later, the well produced less than 100 barrels a day. **An over 90% plunge in production.**
- ➔ Then Continental Resources' 1-17R well in the Bakken fields witnessed a **69% production plunge in its first year.**
- ➔ Now, the industry is watching production from the average shale oil well decline an alarming 50-78% after its first year... as much as **75% first-year decline** for shale gas wells in its first 12 months.

No wonder new wells are being drilled at breakneck speed... at between \$1 million and \$15 million a pop, no less. **Oil companies (until now) had no choice but to empty their wallets into new-well drilling...** it's the only way oil companies could maintain production levels.

According to Baker Hughes, since the beginning of 2014, the number of oil wells has increased by 206, or 15%. In comparison, oil rigs increased by 47 during the corresponding period in 2013. In 2014, most of the increase in rig counts was driven by activity in the oil-rich Permian Basin in western Texas. The region added 95 rigs<sup>8</sup>.

By the way, those \$1 million to \$15 million new-well costs I quoted above are for new *onshore* wells. Deep-water wells cost a lot more, about \$420,000 a day and it takes about 100 days to complete the job<sup>9</sup>. Cost could run from \$42 million to \$100 million – each. TST-3 works in those wells, too.

## TST-3 Cures Red Queen Disease, and the Entire Oil Industry Is About to be Tickled Pink

Spending millions of dollars drilling multiple new wells onshore and off is not always in an oil company's best interest. The risks are enormous. After all, not every well hits pay dirt. Not every formation produces oil. Not every well is tied into infrastructure easily and not every well is economical. And still, the massive spending continues.

The industry calls it "Red Queen Disease," in homage to the character in *Through the Looking Glass* who tells Alice, "It takes all the running you can do, to keep in the same place."

**"Red Queen Disease"** is killing oil companies as well

as America's Oil Boom. But I'm not worried one bit because FalconRidge has the cure...

- ▶ First, TST-3 brings dead wells back to life and the volume of orphaned oil TST-3 can recover could easily be greater than the volume of oil a newly drilled well might produce (TST-3 is a tiny fraction of the cost of drilling new wells, don't forget)
- ▶ Second, the many thousands of modern fracked wells now in rapid decline can snap back 60% to 80% of original flow, again reducing the need to drill new wells
- ▶ Third, TST-3 wells stay robust for years – production does not dwindle because TST-3 recovers vast amounts of oil and gas even fracking wells can't touch... extending America's Oil Boom generations into the future.

Are you beginning to see why I love FalconRidge Oil Technologies?

TST-3 makes everyone happy! It's a near miracle, to be honest. Oil companies. Washington. Environmentalists. And profit-seeking investors are all on the same page!

**FROT** looks like a monster winner no matter how you look at it.

## Already Proven in 1,000 Wells Drilled Through 500 Different Kinds of Rock™

FalconRidge has reams of documented results – on more than 1,000 wells drilled in 500 different kinds of rock by the companies that operated with the first and second generation tools. And now I'll bet that FalconRidge is preparing press releases touting TST-3's remarkable well-completion success stories<sup>10</sup>.

And if I'm right, those press releases could hit the wires within the next few weeks. That's why I say you must buy FROT today, before this news gets out to everyone. When that happens, the stock's entry-level price is bound to move higher, and then higher still as breathtaking spikes in price could quickly ensue.

### **PROFIT IGNITER #1: Orphaned Oil**

**25 million wells around the world are dying for a shot of FalconRidge' TST-3**

When you can show the investment industry that you're pumping fresh new oil or gas from wells thought to be economically dead, you get attention.

**When you show that 60% to 80% of the wells' original flow is restored and that you can extend the life of almost every well ever drilled, you get more than attention. You get buy-out offers from oil giants.**

And when you unlock vast amounts of oil and gas without drilling a single new well... oil executives and investors start naming children after you.

**And why not? TST-3 could double today's net oil and gas production.** In some cases, production could triple. In some others, production could go from zero to the moon. Under-performing wells, even wells thought to be dead, can snap back -- 60% to 80% of original flows restored!

**FalconRidge  
Oil Technologies'**  
Management Is  
Brilliant

### Meet the Management

**Mark Pellicane** President

Considered a visionary leader, and specializing in the areas of product development and implementation, Mr. Pellicane has had a

distinctive career in the development of numerous technology, marketing, and financial companies. Mark has always attributed his strength and success to working with industry leaders and pioneers in the field and integrating strong team leadership values to the project at hand.

This has never been possible before.

It gives FalconRidge a hungry market you might not have realized exists. Worldwide, there are an estimated 25 million “dead” wells dying for a shot of TST-3.

Seriously... 25 million? How can that be?

Well, we've been drilling for resources since the 8<sup>th</sup> Century in China. So it makes sense that millions of wells would be drilled worldwide over a span of more than a thousand years.

It also makes sense to me that most of those abandoned wells still hold billions of dollars worth of oil and gas. Because a traditional oil well only recovers approximately 10% of the original oil in place, a widely accepted industry estimate<sup>12a</sup>.

### **Yes the oil industry left behind 90% of the oil in most cases!**

After all, these are wells that readily produced oil and gas without any help at all from anything resembling today's recovery technology. Every advance in resource recovery technology dramatically proves massive amounts of oil and gas exists in places ancient technology could never access. Now, all they need to do is just go back in and get it with the new advancements like TST-3.

**And here's the kicker:** TST-3 unlocks oil and gas even fracking can't access. That's why TST-3 wells keep producing long after today's fracked wells fade. And it's why oil companies need to replace fracking with TST-3.

Besides, fracking is being banned in communities from coast to coast. But the domestic oil boom can continue, thanks to TST-3<sup>11</sup>.

I've tried and, frankly, it's difficult to imagine how many billions (trillions?) of barrels of orphaned oil there must be in North America, let alone throughout the world.

But it's easy to picture big oil executives whipping themselves into a wild frenzy trying to get their hands on all that oil. And they don't have to reach far.

For example, Pennsylvania alone is home to hundreds of thousands of abandoned wells, and the state doesn't even know where most of them are. But the oil companies know<sup>12</sup>. Most estimates show that throughout America, there's a minimum of 2.5 million wells<sup>13</sup>. That's a huge, powerfully lucrative market for FalconRidge right there.

I think FalconRidge should brag about this. And should FalconRidge press releases begin going out over the wires soon, I'm sure “orphaned oil” will be recovered. Naturally, you'll want **FROT** in your portfolio before any kind of PR campaign begins. This is your rare chance to beat everyone – Wall Street, Big Oil, and everyone else – to the biggest profit punch.

## ***PROFIT IGNITER #2:* The Dirtiest Secret**

### **America's remarkable Oil Boom could go out of business**

Fracking gives oil companies more than public-relation headaches. Fracking gives them something they really hate and don't know how to deal with... wells that fade out fast.

Fracking's lack of staying power never makes oil company brochures<sup>14</sup>.

Oil companies are spending multiples of millions to drill new wells that, until now, had to be fracked... because most all the oil and gas responsible for

At the age of 15, Mr. Pellicane was the youngest student accepted to a Canadian University and was educated at the University of Toronto in the field of sciences. Mr. Pellicane furthered his study in Business, and holds an Oxford MBA (Masters in Business Admin) from Hamilton College, Oxford, England. As an intellectual coupled with his working knowledge and experience, Mr. Pellicane brings tremendous value to the table, ensuring success for his initiatives.

Mr. Pellicane is an accomplished public speaker and lecturer having been invited as guest speaker, and conducting seminars in the areas of technology and business across North America and Great Britain. Mr. Pellicane's Career as a Senior Executive and Industry Leader may be highlighted as follows:

President and CEO of Software Solutions where he spearheaded an operation of software development and distribution to 23 countries globally with over 600 points of presence in Canada alone. Canadian Business in its April 1996 issue featured Mr. Pellicane and his company in an article titled "Microsoft for Tightwads" President and CEO of Infinity Online Systems, one of the first two Internet companies in Canada with a geographical calling region greater than Sprint Canada. Infinity was taken through the public process with an acquisition by Primus Telecommunications (PRTL).

With a shift towards financial products, Mr. Pellicane has assisted numerous companies with the development and launch of products, programs and distribution networks resulting in over \$100 million in sales revenue. Mr. Pellicane has extensive experience in corporate management, business growth, logistical structuring and implementation in many fields. Based in Canada, his current project, FalconRidge, is focused in the oil and gas sector, and more specifically on the optimization and recovery of low yield and non performing oil and gas assets.

**Al Morra** Managing Director Al enjoyed a career in international and corporate banking spanning some 25 years retiring from GE Capital in 1998 as a Senior Vice President. Throughout his career he was involved in numerous turnaround financing, international leases, international loan syndications, leveraged buyouts, real estate financing and resource capital finance. Al has acted as a President, CEO, General Manager, Vice President Finance for

America's Boom is locked in rock (oil-rich shale), accessible only by getting through this rock. Until now, fracking was the only choice. But now, there's TST-3 and the rush to FalconRidge is on.

Oil companies want the production boost TST-3 enables. Communities want fracking replaced because it creates oceans of toxic water. And can completely contaminate entire supplies of fresh water in communities hosting wells.

TST-3 recycles the water it uses. Environmentalists will have nothing to complain about anymore. And oil companies win even bigger!

## **TST-3 Destroys Nothing, Except the Cycle of Doom Created by Fracking**

The oil industry would love nothing more than to break free of this cycle of doom. Their futures depend on it... the entire future of America's Oil Boom depends on it.

That's why, fortunately for us, FalconRidge with its worldwide rights to TST-3 is now squarely in the driver's seat, responsible for America's Oil Boom continuing.

## **It's the same reason FalconRidge could be bought out in a heartbeat**

Don't miss out. **Buy FROT today**, before FalconRidge starts bragging about their success...and before a potential bidding war breaks out between billion-dollar oil giants.

FalconRidge is a new, small company. Its current market cap is under \$45 million, which is little more than lunch money for these mega-huge corporations:

### ***BREAKING NEWS:***

## ***FalconRidge Pushes Fracking Over the Hill***

**FalconRidge could force  
the most hated hero in  
America  
into retirement**

**Even with all the overwhelming  
negatives associated with  
Fracking the oil it has recovered  
has created a Millionaire Maker  
Industry.**

**Early investors in FROT are  
investing in the first true  
alternative to fracking and they  
stand to make tremendous  
profits. You can, too. Buy FROT  
today.**

**I believe TST-3 will be the next  
American hero... ite will be loved  
by all!**

New Oil and Gas Excavation  
Technology (TST 3) Gives Everyone  
What They Want:

- Produces more oil and gas than fracking
- Produces oil and gas faster than fracking
- Produces oil and gas longer than fracked wells
- Produces oil and gas fracking can't reach
- Produces oil and gas from "dead" wells
- Produces oil and gas without the dangers of fracking

Hydraulic fracturing, or fracking, is a method of getting natural gas and oil out of shale formations. It's been the backbone of America's Oil Boom. Without fracking, America loses any sense of energy independence. But a group named Environment America says fracking has produced enough toxic wastewater in one year to sink the

various companies that were in various stages of growth and in some cases in need of operational and financial structuring. His experience in industry includes; injection and blow moulding, plastic extrusion, magnesium production, retail operations, commercial lighting manufacturing, digital imaging for medical record conversion, toy & game manufacturing, packaging and leasing operations. Al brings to FalconRidge over 30 years of corporate experience garnered in both the domestic and international business arenas.

entire city of Washington, D.C. to the bottom of a 22-foot deep lagoon.

Like it or not, fracking has become America's most-hated hero. Environmentalists hate it so much they've gotten politicians to ban it in their towns. Fracking is already banned in Germany and France. Until now, there has never been a true alternative to fracking. Now, however, we have FalconRidge (**FROT**) and the proven powers of TST 3 technology.

Oil and gas companies love it. And environmentalists will certainly welcome the change to TST 3 – no more toxic water to worry about, for one. And no more worries over fracking-induced earthquakes. Unlike fracking, there are no underground explosions with TST 3.

For more technical information on the world's most advanced terra slicing technology, check out the [company's website](#).

**Exxon -- \$415.42 billion**

**Chevron -- \$238.07 billion**

**BP -- \$142.17 billion**

Early investors can buy **FROT** today at about \$0.75. You might never see this stock priced below \$1 again. Investors piling into FROT after this stock is in your portfolio could pay more than \$2 a share – and those latecomers will still make a bundle.

I see **FROT** climbing beyond \$3... over \$4... maybe even past \$5 before FalconRidge soars again on potential takeover talks. How high the giants might bid up FalconRidge is unknown. But I can give you my opinion: \$10, at least.

And if I'm right, a single \$5,000 invested in **FROT** today could grow into \$50,000 within a year, maybe 18 months.

If I'm wrong and **FROT** stops surging once the stock hits \$5, then you're still rolling in clover... your \$5,000 surges to \$25,000. Time will tell, of course, but I can tell you this right now...

- **FROT** could be the most profitable investment in the entire energy sector right now, or any sector for that matter
- FalconRidge's patented TST-3 is the key to extending America's Oil Boom. Oil companies want what this advanced well-completion technology does
- Oil companies save many millions of dollars because TST-3 reduces the need to drill new wells
- TST-3 extends the life of wells in decline, and we now know that almost every one of today's fracked wells declines rapidly within the first 12 months
- TST-3 snaps dead wells back to life, which means America could soon be pumping with billions of barrels of orphaned oil
- TST-3 revives production of under-performing wells up to 80% of original flow, giving America's Oil Boom an instant shot in the arm and a long, healthy life
- TST-3 works its magic on nearly every onshore, offshore, vertical and horizontal well ever drilled

- Practically every single oil company with a well (dead or alive) is suddenly a potential source of revenue for **FROT**

America's Oil Boom grows louder... we won't have to buy oil from fanatic nations that hate us and use the proceeds to fund terrorism. America's energy independence grows strong instead. And everyone (except those who hate us) unites in joy.

- The well-documented dangers of fracking no longer exist... water shortages become a complaint of the past, contaminated water supplies become ancient history, and...
- Local real estate values go up!

Landscapes clean up... pipelines become flooded with vast amounts of orphaned oil left behind by millions of wells that were drilled before fracking existed... production from today's wells no longer falls off a cliff after just 12 months like fracked wells do... and America's Oil Boom gets a new lease on life that could last for generations.

Think of it. The safety of our families... the economic security that comes from producing our own energy supply... the awesome profits investors like us can make as the oil and gas industries ditch fracking for TST-3.

Now are you beginning to see why I'm so excited about **FROT**? Well, there's still more you should know... much more.

## **PROFIT IGNITER #3: Takeover Target**

### How much is it worth to the likes of BP and Exxon to control the future?

FalconRidge's TST-3 is extending the lives of oil and gas wells. Underperforming wells are snapping back into robust production, from 60% to 80% of their original flows. This is reducing the need for oil companies to constantly cough up millions of dollars to drill new wells.

Don't you think one of the oil giants would like to control what FalconRidge now controls... the use of TST-3? All of them would love to own that powerful edge, which is why any potential bidding war could be fierce.

The big winner? Early **FROT** investors!

If a quick 100% gain makes you happy, you're likely to be totally thrilled should **FROT** jump 300% over the coming weeks. And that 300% spike potential doesn't include any price jumps that could result from possible takeover talks and bidding wars.

I'm thrilled over the potential FalconRidge is presenting us. But I did a lot of research on the company before I formed my opinions. I would hope you do as well. So before you log onto your online brokerage account to buy **FROT**, check out the company's website. Google "terra slicing." If you're still impressed, then by all means, add **FROT** to your portfolio.

To your future wealth,

Charles Moskowitz, Editor

*The Moskowitz Report*

**P.S.** Early investors make the biggest profits. And you're among the first to learn about FalconRidge. Buy **FROT** as soon as possible.

**P.P.S.** Check out the company's website at <http://www.falconridgeoil.com>

Videos there show you how TS-3 works. Keep in mind that what's presented is for oil company executives, not consumers or individual investors like us. Even so, you'll see FalconRidge is for real and you'll see that the profits early investors stand to collect are real, too.

BTW: Savvy investors subscribe to my private advisory because I have a proven knack for picking triple-digit winners...

4 [http://en.wikipedia.org/wiki/Hydraulic\\_fracturing\\_by\\_country](http://en.wikipedia.org/wiki/Hydraulic_fracturing_by_country)

5 <http://www.falconridgeoil.com/proven>

6 Between 2008 and 2013, U.S. oil production surged by 64 percent. U.S. natural gas production increased by 42 percent between 2005 and 2013.

<http://wolfstreet.com/2014/06/04/the-questionable-staying-power-of-the-us-fracking-boom-2/>

7 According to Pete Stark, a geologist and analyst at IHS, Inc., production from the average shale oil well declines by 50 to 78 percent after its first year, and by 50 to 75 percent after the first year for shale gas wells. The Serenity 1-3H oil well in Oklahoma, owned by Chesapeake Energy, produced over 1,200 b/d in 2009; in 2013, it produced less than 100 b/d. Continental Resources' Robert Heuer 1-17R well in the Bakken fields saw production plunge 69 percent in its first year. In order to maintain the same level of output in the face of such drastic decline rates, upstream companies must constantly drill new wells.

9 With deepwater drilling rig rates in 2010 of around \$420,000/day,[7] and similar additional spread costs, a deep water well of duration of 100 days can cost around US\$100 million.

With high performance jackup rig rates in 2010 of around \$150,000,[7] and similar service costs, a high pressure, high temperature well of duration 100 days can cost about US\$30 million."

"Onshore wells can be considerably cheaper, particularly if the field is at a shallow depth, where costs range from less than \$1 million to \$15 million for deep and difficult wells.
